ACD201 latest exam torrent & ACD201 dump training vce & ACD201 reliable training vce

We guarantee you that our top-rated Appian ACD201 practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the Appian ACD201 certification exam on the very first go. The authority of Appian ACD201 Exam Questions rests on its being high-quality and prepared according to the latest pattern.

Appian Senior Developer Sample Questions (Q72-Q77):

NEW QUESTION # 72

You need to create a read-only grid that displays support case information. Data for the support cases is mapped to the "Case" record type with data sync enabled.

Within the record, there are fields named "createdDateTime" and "resolvedDateTime". These two fields store the timestamps for when a case is created and resolved, respectively.

The grid includes a column indicating the number of hours between when the case was created and when it was resolved. This column must be sortable within the grid.

How should you calculate the hour value that will display in the column?

- A. Create a custom record field that evaluates in real-time, and calculates the number of hours between when the case was created and when it was resolved.
- B. Within the grid column, utilize an Appian function to calculate the number of hours between when the case was created and

when it was resolved.

- C. Create a custom record field that evaluates at sync-time, and calculates the number of hours between when the case was created and the current date and time.

Answer: A

Explanation:

A custom record field that evaluates in real-time and calculates the hours between "createdDateTime" and "resolvedDateTime" ensures the calculated value is available as a sortable field within the read-only grid.

NEW QUESTION # 73

You need to test a related action that updates record data.

Appropriate users must be able to access the form. You also need to ensure that the data is successfully updated.

Using Appian, which is the best testing method you should use?

- A. User Accepting Testing
- B. Unit Testing
- C. Performance Testing

Answer: A

Explanation:

User Acceptance Testing (UAT) is the best method, as it ensures appropriate users can access the form and verifies that the data update process works as intended in a real-world scenario.

NEW QUESTION # 74

You're creating a support case record type while working on a support case management system. You want to track support case status changes.

You want to use record events to track this information.

Which record data source type is the most appropriate for you to use?

- A. Process Model source with data sync enabled
- B. Web service without data sync enabled
- C. Database source with data sync enabled

Answer: C

Explanation:

A database source with data sync enabled is required to use record events for tracking support case status changes, as Appian record events are only supported for synced record types with a database as the data source.

NEW QUESTION # 75

You're designing a file upload process that integrates with an external document management system.

Part of this process is to develop a start form with a file upload component, so that the user can upload multiple files.

The business has requested that the maximum file size that can be uploaded through this process is 1GB.

Additionally, you're aware that the integration's API can accept files with a maximum file size of 3GB, but recommends no larger than 1GB.

Can the process be more performant without straining the application or integration?

- A. No. The file upload component is capable of accepting 1 GB files and the integration can handle this.
- B. Yes. Request the business reconsiders its requirements and find manual workarounds as it is not recommended to upload files of this size in both Appian and the integration.
- C. Yes. Request the business allows for these files to be uploaded as an overnight process by storing large files in a staging table, so that adequate resources are available.

Answer: C

Explanation:

While Appian and the integration technically support 1 GB file uploads, handling such large files during interactive sessions can negatively impact application performance, user experience, and resource utilization.

A better approach is to request that the business allow these files to be uploaded asynchronously (e.g., overnight batch process), by temporarily storing them (e.g., in a staging table or folder) and processing them when system load is lower. This makes the process more performant and reliable without straining Appian or the external system.

NEW QUESTION # 76

You're designing a custom component rule!pagingComponent() to page through a list of items. The component must display the current page numbers being shown, as well as the total number of items. Users should be able to click arrows to increase or decrease the pagination.

Review the following:

```
allLocalVariables(  
  local!query: rule!getData(),  
{  
  rule!interface(),  
  rule!pagingComponent()  
}
```

Which two patterns should be used when calling the component in this scenario? (Choose two.)

- A. A rule input ri!pagingInfo on rule!pagingComponent() with a local variable of the same name in the main interface with an initial value. When the arrows are clicked, this updates the value of the local variable in the main interface.
- B. Passing into the rule input totalCount of rule!pagingComponent() the value: local!query.totalCount where local!query is returning a dataSubset and returnTotalCount = "True".
- C. A local variable local!pagingInfo inside rule!pagingComponent() with an initial value. When the arrows are clicked, this updates the value of the local variable.
- D. A local variable local!totalCount calculated using count(local!query), which is passed into rule!pagingComponent() via a rule input. The data type of local!query is a list of record or Custom Data Type (CDT).

Answer: A,B

Explanation:

Passing local!query.totalCount (from a dataSubset with returnTotalCount: true) into a rule input allows rule!pagingComponent() to accurately display total items for pagination.

Managing paging state (such as ri!pagingInfo) as a local variable in the main interface and updating it when arrows are clicked ensures that pagination is controlled centrally, maintaining state across the UI and allowing the component to function as intended.

NEW QUESTION # 77

.....

Free update for ACD201 Study Guide materials are available, that is to say, in the following year, you can get the latest information about the ACD201 exam dumps without spending extra money. In addition, ACD201 study guide of us is compiled by experienced experts, and they are quite familiar with the dynamics of the exam center, so that if you choose us, we can help you to pass the exam just one time, in this way, you can save your time and won't waste your money. We also have online and offline chat service stuff, if any other questions, just contact us.

ACD201 Latest Exam Test: <https://www.testkingpdf.com/ACD201-testking-pdf-torrent.html>

Now every Appian Senior Developer (ACD201) exam candidate can prepare as per his style by selecting the suitable format, Inclusive and Reasonable ACD201 Learning Material, TestkingPDF provides Appian ACD201 dumps with pdf format or software format, pdf file will be sent in attachment and software file in a download link, you need to download the link in a week, it will be automatically invalid after a week, We keep a close watch at the most advanced social views about the knowledge of the test ACD201 certification.

Default and Null, Creating a Recurring Event, Now every Appian Senior Developer (ACD201) exam candidate can prepare as per his style by selecting the suitable format, Inclusive and Reasonable ACD201 Learning Material.

New Latest Study ACD201 Questions | Latest Appian ACD201: Appian Senior Developer 100% Pass

We keep a close watch at the most advanced social views about the knowledge of the test ACD201 certification, All these three TestkingPDF's Appian ACD201 exam dumps formats contain the real and updated ACD201 practice test.
