Training AP-202 Online - AP-202 Answers Real Questions

If you come to our website to choose our AP-202 real exam, you will enjoy humanized service. Firstly, we have chat windows to wipe out your doubts about our AP-202 exam materials. You can ask any question about our study materials. All of our online workers are going through special training. They are familiar with all details of our AP-202 Practice Guide. If you have any question, you can ask them for help and our services are happy to give you guide on the AP-202 learning quiz.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q25-Q30):

NEW QUESTION # 25

A user wants to have a customized experience for adding items to the cart. The user also wants the mini cart module to reflect changes to the state of the cart afterwards. How should this requirement be fulfilled?

- A. Leverage the Addto Cart Global API which add items to the cart and also refreshes the page with the new data.
- B. Trigger the global cartChange" event and then trigger changeMiniCart" event after the Add to Cart Action on the custom button.
- C. Write a custom Remote Action to refresh the Mini Cart and refresh the Cart Line item count on the Cart Link in the header.
- D. Trigger the global cartChange" event after the Add to Cart Action on the custom button.

Answer: D

Explanation:

To have a customized experience for adding items to the cart and also update the mini cart module, the requirement can be fulfilled by triggering the global "cartChange" event after the Add to Cart Action on the custom button. This event will notify all the components that are listening to it that the cart has changed and they should refresh their data accordingly. The mini cart module is one of these components, so it will update its state based on the new cart data. Salesforce B2B Commerce and D2C Commerce Developer Guide, Events

NEW QUESTION # 26

Northern Trail Outfitters (NTO) wants to be able to reference historical data in another system from the Salesforce user experience as read-only, but does not want to import the data into the org or incur storage costs. What is one product feature that could accomplish this?

- A. Big Objects
- B. External SOQL queries in Apex code
- C. External Objects
- D. Lightning Out

Answer: C

Explanation:

The correct answer is External Objects. External objects are similar to custom objects, except that they map to data that's stored outside your Salesforce org¹². You can use external objects to access data in real time via web service callouts, without copying the data into your org¹². External objects are read-only by default, but you can enable write operations for some data sources¹².

Big Objects are not the correct answer. Big objects allow you to store and manage massive amounts of data on the Salesforce platform. However, big objects are not suitable for referencing historical data in another system, as they require importing the data into the org and incur storage costs.

Lightning Out is not the correct answer. Lightning Out is a feature that lets you run Lightning components in any container outside the Salesforce platform. However, Lightning Out does not provide a way to reference historical data in another system, as it is mainly used for embedding Lightning components in other web pages or apps.

External SOQL queries in Apex code are not the correct answer. External SOQL queries are a way to query data from external data sources using SOQL syntax in Apex code. However, external SOQL queries require defining an external data source and an external object first, so they are not a product feature by themselves, but rather a way to use external objects in Apex code. NEW QUESTION # 27

Which technique is used by Lightning Web Components to provide areas of swappable, customizable content?

- A. MutationObservers
- B. CSS classes
- C. JQuery templates
- D. <slot> elements

Answer: D

Explanation:

Lightning Web Components (LWC) use <slot> elements to define areas within the component's template where content can be inserted dynamically. This feature, part of the Web Components standard, allows for the creation of customizable and reusable components. Salesforce developer documentation on LWC outlines the use of slots to build flexible component interfaces, enabling developers to design components that can adapt to various content structures and layouts.

NEW QUESTION # 28

What target does a developer need to set in the js-meta.xml file when creating a custom LWC component for use in the Checkout Flow?

- A. lwc__FlowComponent
- B. lightning_FlowScreen
- C. lightning__CheckoutFlow
- D. lwc__flow

Answer: A

Explanation:

When creating a custom Lightning Web Component (LWC) for use in the Checkout Flow, a developer must set the target in the js-meta.xml file to lwc__FlowComponent. This target specifies that the LWC is intended for use within the flow component framework, allowing it to be utilized specifically in the context of Salesforce Flows, including those used in the checkout process. Salesforce documentation on developing custom LWCs for various targets would detail this requirement, ensuring that developers understand how to correctly package and deploy their components for the intended use case.

NEW QUESTION # 29

Which option is the correct syntax to render a property in a Lightning web component template?

- A. Surround the property with curly braces and exclamation point: {{property}}
- B. Surround the property with an exclamation point and curly braces: {!property}
- C. Surround the property with curly braces: {property}
- D. Surround the property with brackets: [property]

Answer: C

Explanation:

The correct syntax to render a property in a Lightning web component template is to surround the property with curly braces: {property}. This syntax allows you to access the property value from the JavaScript class of the component and display it in the HTML template. The other options are incorrect because they either use invalid characters or do not follow the standard syntax for rendering a property in a Lightning web component template. Use JavaScript Properties in Templates | Lightning Web Components Developer Guide

NEW QUESTION # 30

.....

With the aim of helping aspirants to achieve the B2B Commerce for Developers Accredited Professional (AP-202) certification, DumpsActual is committed to providing the best quality and updated Salesforce AP-202 exam dumps. With their authentic and Real AP-202 Exam Questions, you can be confident of passing the Salesforce AP-202 certification exam on the first try.
