Passing the exam will help you stand out in a competitive job market and increase your chances of landing a high-paying job in the cybersecurity field.

## **Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q447-Q452):**

### **NEW QUESTION # 447**

Which classification of cross-site scripting attack executes the payload without storing it for repeated use?

- A. DOM
- B. stored
- C. CSRF
- **D. reflective**

**Answer: D**

### **NEW QUESTION # 448**

What causes events on a Windows system to show Event Code 4625 in the log messages?

- A. Another device is gaining root access to the system
- B. A privileged user successfully logged into the system
- **C. Someone is trying a brute force attack on the network**
- D. The system detected an XSS attack

**Answer: C**

Explanation:

Event Code 4625 in Windows logs indicates a failed logon attempt. This could be a sign of someone trying to guess the credentials of a valid user account by repeatedly trying different passwords or usernames. This is known as a brute force attack and can be used to gain unauthorized access to a system or network. References:

### **NEW QUESTION # 449**

What is a benefit of agent-based protection when compared to agentless protection?

- **A. It collects and detects all traffic locally**
- B. It provides a centralized platform
- C. It manages numerous devices simultaneously
- D. It lowers maintenance costs

**Answer: A**

Explanation:

Agent-based protection is a type of endpoint security that uses software agents installed on the devices to monitor and protect them. Agent-based protection can collect and detect all traffic locally, which means it can operate without relying on a network connection or a centralized server. Agent-based protection can also provide more granular and comprehensive visibility and control over the devices. References:
