Pass Guaranteed Quiz Salesforce - Integration-Architect - Salesforce Certified Integration Architect Accurate Exam Consultant

As is known to us, the high pass rate is a reflection of the high quality of Integration-Architect study torrent. The more people passed their exam, the better the study materials are. There are more than 98 percent that passed their exam, and these people both used our Integration-Architect Test Torrent. We believe that our Integration-Architect test torrent can help you improve yourself and make progress beyond your imagination. If you buy our Integration-Architect study torrent, we can make sure that our study materials will not be let you down.

Salesforce Certified Integration Architect Sample Questions (Q54-Q59):

NEW QUESTION # 54

A large consumer goods manufacturer operating in multiple countries is planning to implement Salesforce for their Sales and Support operations globally. They have the following security requirements:

1. Internal users from each country have to be authenticated with their local active directory.
2. Customers can create their own login or use Google login.
3. Partners have to be authenticated through a central system which is to be determined.
4. Internal users will have access to the central ERP with their credentials maintained in the ERP.
5. Additional internal systems will be integrated with Salesforce for Sales and Support business processes.

Which three requirements should the integration architect evaluate while designing the integration needs of this project?
Choose 3 answers

- A. Assess security requirements for internal systems and decide Integration methods that support the requirements.
- B. Evaluate the build of a custom authentication mechanism for users in each country and support for customers and partners.
- C. Consider Third party Single Sign On solution supporting all user authentication including customer and partner.
- D. Evaluate Salesforce solution for customers and for partners, using third party solution for internal users.
- E. Evaluate Salesforce native authentication mechanism for all users including customers and partners.

Answer: A,B,E

NEW QUESTION # 55

An integration architect needs to build a solution that will be using the Streaming API, but the data loss should be minimized, even when the client re-connects every couple of days.

Which two types of Streaming API events should be considered?

Choose 2 answers

- A. Generic Events
- B. Change Data Capture Events
- C. PushTopic Events
- D. High Volume Platform Events

Answer: B,D

Explanation:

Explanation

The integration architect should consider Change Data Capture Events and High Volume Platform Events for using the Streaming API with minimal data loss. Change Data Capture Events capture changes to Salesforce records and deliver them as events to subscribers. High Volume Platform Events are custom events that can be published and consumed at a large scale. Both types of events support reliable event delivery, which means that events are stored for 72 hours and can be replayed by subscribers in case of connection loss or failure. This ensures that data loss is minimized, even when the client re-connects every couple of days¹²

NEW QUESTION # 56

A subscription-based media company's system landscape forces many subscribers to maintain multiple accounts and to log in more than once. An Identity and Access Management (IAM) system, which supports SAML and OpenId, was recently implemented to improve the subscriber experience through self-registration and single sign-on (SSO). The IAM system must integrate with Salesforce to give new self-service customers instant access to Salesforce Community Cloud.

Which requirement should Salesforce Community Cloud support for self-registration and SSO?

- A. OpenId Connect Authentication Provider and JIT provisioning
- B. SAML SSO and Registration Handler
- C. SAML SSO and Just-in-Time (JIT) provisioning

Answer: A

NEW QUESTION # 57

A large enterprise customer is implementing Salesforce. Current systems include ERP for invoicing /fulfillment and a Marketing solution for email. Associates need to view and log interactions in Salesforce.

Which system should be the system of record for customers and prospects?

- A. New Custom Database for customers and prospects
- B. Salesforce with relevant Marketing and ERP information
- C. ERP with all prospect data from Marketing and Salesforce

Answer: B

Explanation:

To achieve a "Customer 360" view where sales and service associates have the context needed for daily interactions, Salesforce is the logical System of Record (SoR) for customer and prospect engagement.

While the ERP remains the master for financial transactions (invoices) and the Marketing tool masters campaign analytics, Salesforce should house the core "Golden Record" of the customer. This is achieved by integrating relevant data from the ERP (order status, invoice history) and Marketing (lead source, email engagement) into Salesforce. This strategy (Option A) empowers associates to log interactions and view history in one place, fulfilling the primary goal of the CRM implementation while avoiding the complexity of a new custom database (Option B) or trying to force prospect-level engagement data into a rigid ERP (Option C).

NEW QUESTION # 58

Northern Trail Outfitters has recently implemented middleware for orchestration of services across platforms.

The Enterprise Resource Planning (ERP) system being used requires transactions be captured near real-time at a REST endpoint initiated in Salesforce when creating an Order object. Additionally, the Salesforce team has limited development resources and requires a low-code solution. Which option should fulfill the use case requirements?

- A. Use Remote Process Invocation fire and forget pattern on insert on the order object using Flow Builder.
- B. Use Lightning Flow to create a platform event, selecting the record type as the platform event name on insert of record.
- C. Implement Change Data Capture on the Order object and leverage the replay ID in the middleware solution.

Answer: A

Explanation:

To satisfy a requirement for near real-time REST updates with limited development resources, the architect should utilize Flow Builder. Flow Builder is Salesforce's primary low-code tool for automating complex business logic and outbound integrations. The Remote Process Invocation-Fire and Forget pattern is the most efficient way to signal an external system (or middleware) that a record was created without blocking the user. Using a Record-Triggered Flow on the Order object, the architect can configure an Action (such as an External Service or a simple HTTP Callout) to send the order data to the middleware's REST endpoint. Option A is slightly incorrect because creating a platform event is just one step in an event-driven flow; the "Fire and Forget" pattern more accurately describes the end-to-end intent. Option B (Change Data Capture) is a powerful tool, but it is considered a "pro-code" or high-configuration solution on the middleware side, requiring the middleware to manage Replay IDs and Bayeux subscriptions. Option C leverages the native strengths of Flow to fulfill the requirement declaratively, allowing the team to deliver a functional integration without writing Apex code while meeting the near-real-time performance expectations of the ERP.

NEW QUESTION # 59

.....

Our Integration-Architect prep material target all users and any learners, regardless of their age, gender and education background. We provide 3 versions for the clients to choose based on the consideration that all the users can choose the most suitable version to learn. The 3 versions each support different using method and equipment and the client can use the Integration-Architect Exam Dump on the smart phones, laptops or the tablet computers. The clients can choose the version which supports their equipment on their hands to learn.
