GitHub-Actions Test Questions | New GitHub-Actions Exam Book

Learning is sometimes extremely dull and monotonous, so few people have enough interest in learning, so teachers and educators have tried many ways to solve the problem. Research has found that stimulating interest in learning may be the best solution. Therefore, the GitHub-Actions prepare guide' focus is to reform the rigid and useless memory mode by changing the way in which the GitHub-Actions Exams are prepared. GitHub-Actions practice materials combine knowledge with the latest technology to greatly stimulate your learning power. By simulating enjoyable learning scenes and vivid explanations, users will have greater confidence in passing the qualifying exams.

GitHub Actions Certificate Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

As a developer, you are designing a workflow and need to communicate with the runner machine to set environment variables, output values used by other actions, add debug messages to the output logs, and other tasks. Which of the following options should you use?

- A. workflow commands
- B. self-hosted runners
- C. environment variables
- D. enable debug logging
- E. composite run step

Answer: A

Explanation:

Workflow commands are special commands that allow you to interact with the runner, set environment variables, output values, add debug messages, and perform other tasks within the workflow. These commands are used to modify the environment or influence the behavior of the GitHub Actions runner.

NEW QUESTION # 31

What is the right method to ensure users approve a workflow before the next step proceeds?

- A. granting users repository approval permissions
- B. adding users as required reviewers for an environment
- C. creating a branch protection rule and only allow certain users access
- D. granting users workflow approval permissions

Answer: B

Explanation:

GitHub Actions allows you to configure environment protection rules, where you can require specific users or teams to approve the deployment before the workflow proceeds to the next step. This ensures that the required reviewers approve the workflow before any sensitive actions (such as deployment) occur.

NEW QUESTION # 32

How many jobs will result from the following matrix configuration?

```
strategy:
  matrix:
    color: [green, pink]
    animal: [owl, magpie]
    include:
      - color: blue
        animal: owl
      - color: pink
        animal: magpie4
```

- A. 6 jobs
- B. 4 jobs
- C. 3 jobs
- D. 5 jobs

Answer: A

Explanation:

The matrix configuration specifies two variables: color and animal. The color variable has 2 values (green and pink), and the animal variable has 2 values (owl and magpie). This would result in 4 combinations (2 color values × 2 animal values). Additionally, the

include section introduces two more combinations (color: blue and animal: owl; color: pink and animal: magpie).

NEW QUESTION # 33

What is the smallest scope for an environment variable?

- A. the workflow settings
- B. a job
- C. a step
- D. the workflow env mapping

Answer: C

Explanation:

The smallest scope for an environment variable is within a step. Environment variables defined within a step are only accessible to that particular step, which makes it the smallest scope for a variable in a GitHub Actions workflow.

NEW QUESTION # 34

Which default GitHub environment variable indicates the name of the person or app that initiated a workflow?

- A. GITHUB_ACTOR
- B. GITHUB_USER
- C. ENV_ACTOR
- D. GITHUB_WORKFLOW_ACTOR

Answer: A

Explanation:

The GITHUB_ACTOR environment variable indicates the name of the person or app that initiated the workflow. This variable is automatically provided by GitHub in the workflow and can be used to identify the user or application triggering the workflow.

NEW QUESTION # 35

.....

If you are preparing for an exam, it may spend lots of time, but don't worry, if you are preparing for the GitHub-Actions exam, the product of our company will help you save your time.
