## Quiz 2026 CT-UT: ISTQB Certified Tester Usability Tester Latest Test Vce

It is an important process that filling in the correct mail address in order that it is easier for us to send our CT-UT study guide to you after purchase, therefore, this personal message is particularly important. We are selling virtual CT-UT learning dumps, and the order

of our CT-UT training materials will be immediately automatically sent to each purchaser's mailbox according to our system. It is very fast and convenient to have our CT-UT practice questions.

## ISTQB CT-UT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Selecting Appropriate Methods: This domain helps Test Managers make decisions on which usability evaluation methods to apply depending on project context, resources, and maturity. It discusses criteria for selecting usability, user experience, and accessibility evaluation methods suited to different stages of development and organizational needs, including agile development scenarios.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• User Surveys: This part assesses the ability of Usability Test Analysts to design and use surveys to gather user feedback on software usability. It describes how to prepare user surveys, select appropriate questionnaires, and analyze survey responses to measure user satisfaction and other quality attributes from the user's perspective.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Usability and Accessibility Standards: This part addresses the knowledge required by Compliance Officers regarding standards and guidelines that govern usability and accessibility. It introduces ISO standards like ISO 9241-110 and ISO 9241-171, manufacturer guidelines from major platforms, and web accessibility guidelines such as WCAG. It also touches on legislation relevant to accessibility requirements, such as the UK Equality Act and the Americans with Disabilities Act.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Risks in Usability, User Experience and Accessibility: This domain assesses the ability of Risk Analysts to identify and analyze common risks that can affect usability, user experience, and accessibility. It differentiates between product risks—such as users being unable to use a product effectively—and project risks, including lack of expertise or insufficient usability evaluation processes. Understanding these risks helps in planning effective usability testing and evaluation.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Usability Reviews: This domain evaluates the skills of Usability Testers in conducting reviews of software interfaces without user involvement. It differentiates informal reviews from expert reviews and introduces heuristic evaluation as a structured method. The section describes step-by-step approaches to preparing for and conducting reviews, emphasizing the importance of consensus and clear communication of findings.</li></ul>

## ISTQB Certified Tester Usability Tester Sample Questions (Q37-Q42):

### NEW QUESTION # 37

A "usability test participant" ...

- A. ... helps to set up the system used for the usability test.
- B. ... can be the organizer of a usability test.
- C. ... is a person who observes a usability test.
- D. ... is a representative user who solves typical tasks in a usability test.

**Answer: D**

Explanation:

A usability test participant is a person selected to represent the target user group and asked to perform specific tasks in a usability test. Their actions, reactions, and feedback help identify usability issues and evaluate the system's effectiveness, efficiency, and user satisfaction. This role is strictly observational and does not involve organizing, observing, or setting up the test. Options A, B, and C describe other roles (e.g., technical support, observers, or moderators). Only option D accurately reflects the definition of a usability test participant.

#####

## NEW QUESTION # 38

As an expert for usability, you're in charge of the usability part of the development of a business application for a large customer. You have worked as a usability expert with the development team for two years and are operating well together; the developers value your feedback and give their bests implementing your suggestions. The product is in an early stage, so there's only a rudimentary prototype available.

Given this information, what is the best approach to verify the usability at the current stage?

- A. Unmoderated usability test
- B. Usability maturity assessment
- **C. Usability review**
- D. Usability test in the lab

**Answer: C**

Explanation:

At an early development stage where only a rudimentary prototype exists, a usability review (e.g., expert or heuristic review) is the most effective method. It allows usability specialists to identify potential usability issues without the need for a fully functioning product. Reviews can provide immediate, actionable feedback to guide design improvements before moving into more resource-intensive usability testing. An unmoderated usability test (B) or lab test (D) may be impractical at this stage due to limited interactivity. A usability maturity assessment (C) evaluates organizational processes and is not applicable to evaluating a specific prototype.

## NEW QUESTION # 39

How can the approach for conducting user surveys be summarized best?

- A. Write survey plan, interview users and stakeholders, select questionnaire, recruit users, remind users, communicate
- **B. Write survey plan, interview users and stakeholders, select questionnaire, deploy questionnaire, analyze, communicate**
- C. Write survey plan, write schedule, select questionnaire, recruit users, analyze, communicate
- D. Write survey plan, write schedule, select questionnaire, recruit users, remind users, communicate

**Answer: B**

Explanation:

Conducting user surveys involves a structured approach that ensures data collection is effective, reliable, and meaningful. The process typically starts with writing a survey plan, which defines the objectives, scope, target population, and methodology. Next, interviewing users and stakeholders is important to gather qualitative insights, refine survey questions, and align the survey with business goals and user needs.

Selecting or designing the questionnaire follows, which includes crafting clear, unbiased questions to capture the desired data. After that, deploying the questionnaire to the recruited participants is essential; this can be done via email, online tools, or in-person, depending on the context. Once the data is collected, it must be analyzed to extract meaningful patterns, trends, and insights. Finally, communicating the findings to stakeholders completes the process by informing decision-making.

Other options miss critical steps such as deploying the questionnaire (Option C), or combine steps incorrectly (Options A and D). Importantly, the step of interviewing users and stakeholders prior to deployment ensures the survey is well-informed and targeted, enhancing the quality and relevance of data collected.

## NEW QUESTION # 40

Which of the following statements about usability test plans is true?

- A. It should be very elaborate and at least 10 pages
- B. It contains the results of the test sessions
- **C. It contains a schedule**

- D. It should contain the briefing instructions

**Answer: C**

Explanation:

A usability test plan is a foundational document created before conducting usability testing. It outlines the objectives, scope, methodology, participants, tasks, and schedule for the testing activities. One of its essential components is the schedule, which details when and how test sessions will occur to ensure proper resource allocation and time management. Including a schedule helps coordinate between test moderators, participants, observers, and stakeholders, making the testing process organized and efficient. While briefing instructions (Option B) may be related to the usability test, they are typically documented separately or included in participant materials rather than the formal test plan itself. The test plan should be concise and focused; it need not be overly elaborate or lengthy (Option C), as clarity and usability of the plan are more important than length. The results of the test sessions (Option D) are not included in the test plan but rather compiled afterward in a test report or analysis document.

Therefore, the correct statement is that the usability test plan contains a schedule, ensuring a structured timeline for the usability testing activities.

**NEW QUESTION # 41**

Which of the following is the correct distinction between formative and summative usability evaluation?

- A. Summative evaluations focus on improvement, formative evaluations assess the outcome
- B. **Summative evaluations assess the outcome, formative evaluations focus on improvement**
- C. Summative evaluations mostly rely on experts, formative evaluations require users
- D. Summative evaluations mostly rely on user tests, formative evaluations require experts

**Answer: B**

Explanation:

Formative usability evaluation is conducted during the development process to identify usability problems and improve the product iteratively. It is diagnostic and improvement-focused. Summative evaluation, on the other hand, is done after development to assess the final product's usability, measuring how well it meets defined usability goals. Therefore, the correct distinction is that formative evaluation focuses on improvement, and summative evaluation assesses the outcome. This distinction aligns with widely accepted models such as those defined by ISO 9241-210 and usability.gov.
