Latest 350-401 Test Pass4sure | 350-401 Valid Exam Pattern

350-401 practice questions are stable and reliable exam questions provider for person who need them for their exam. We have been staying and growing in the market for a long time, and we will be here all the time, because the excellent quality and high pass rate of our 350-401 training braindump. As for the safe environment and effective product, there are thousands of candidates are willing to choose our 350-401 study guide, why don't you have a try for our 350-401 study material, never let you down!

Cisco Implementing Cisco Enterprise Network Core Technologies (350-401 ENCOR) Sample Questions (Q250-Q255):

NEW QUESTION # 250

Which congestion queuing method on Cisco IOS based routers uses four static queues?

- A. low latency
- B. Priority
- C. weighted fair
- D. custom

Answer: B

Explanation:

Priority Queuing (PQ) - This type of queuing places traffic into one of four queues. Each queue has a different level of priority, and

higher-priority queues must be emptied before packets are emptied from lower-priority queues. This behavior can "starve out" lower-priority traffic.

NEW QUESTION # 251

Which two GRE features are configured to prevent fragmentation? (Choose two.)

- A. TCP window size
- B. MTU ignore
- C. PMTUD
- D. DF bit Clear
- E. IP MTU
- F. TCP MSS

Answer: C,F

NEW QUESTION # 252

Which tool is used in Cisco DNA Center to build generic configurations that are able to be applied on device with similar network settings?

- A. Application Policies
- B. Authentication Template
- C. Command Runner
- D. Template Editor

Answer: D

NEW QUESTION # 253

What NTP Stratum level is a server that is connected directly to an authoritative time source?

- A. Stratum 14
- B. Stratum 1
- C. Stratum 15
- D. Stratum 0

Answer: D

Explanation:

The stratum levels define the distance from the reference clock. A reference clock is a stratum 0 device that is assumed to be accurate and has little or no delay associated with it. Stratum 0 servers cannot be used on the network but they are directly connected to computers which then operate as stratum-1 servers. A stratum 1 time server acts as a primary network time standard.

A stratum 2 server is connected to the stratum 1 server; then a stratum 3 server is connected to the stratum 2 server and so on. A stratum 2 server gets its time via NTP packet requests from a stratum 1 server. A stratum 3 server gets its time via NTP packet requests from a stratum-2 server... A stratum server may also peer with other stratum servers at the same level to provide more stable and robust time for all devices in the peer group (for example a stratum 2 server can peer with other stratum 2 servers). NTP uses the concept of a stratum to describe how many NTP hops away a machine is from an authoritative time source. A stratum 1 time server typically has an authoritative time source (such as a radio or atomic clock, or a Global Positioning System (GPS) time source) directly attached, a stratum 2 time server receives its time via NTP from a stratum 1 time server, and so on.
