

Achieve your goals with ITIL-4-Practitioner-Deployment-Management actual dumps & Peoplecert ITIL-4-Practitioner-Deployment-Management exam pdf

The ActualTestsIT is committed to making the ITIL 4 Practitioner: Deployment Management ITIL-4-Practitioner-Deployment-Management exam questions the first preference of ITIL-4-Practitioner-Deployment-Management exam candidates. To achieve this objective the ActualTestsIT offers the real and updated ITIL-4-Practitioner-Deployment-Management dumps in three easy-to-use and compatible formats. These formats are ITIL 4 Practitioner: Deployment Management ITIL-4-Practitioner-Deployment-Management PDF dumps files, desktop practice test software, and web-based practice test software. All these three ITIL-4-Practitioner-Deployment-Management Practice Questions type are easy to install and smoothly work with all devices, operating systems, and browsers. So you rest assured that with all ITIL-4-Practitioner-Deployment-Management exam practice test questions you will get everything that you need to learn, prepare and pass the valuable ITIL-4-Practitioner-Deployment-Management certification with good scores.

It is well known that Peoplecert certification plays a big part in the IT field and obtaining it means you have access to the big companies and recognized by the authority. But the reality is that the ITIL-4-Practitioner-Deployment-Management Braindumps torrents are very difficult and the pass rate of ITIL-4-Practitioner-Deployment-Management practice test is low. So choosing our exam training materials are very necessary to every candidate.

>> ITIL-4-Practitioner-Deployment-Management Sample Questions <<

Peoplecert ITIL-4-Practitioner-Deployment-Management Reliable Test Sample | ITIL-4-Practitioner-Deployment-Management Test Simulator

You can conveniently test your performance by checking your score each time you use our Peoplecert ITIL-4-Practitioner-Deployment-Management practice exam software (desktop and web-based). It is heartening to announce that all ActualTestsIT users will be allowed to capitalize on a free Peoplecert ITIL-4-Practitioner-Deployment-Management Exam Questions demo of all three formats of the Peoplecert ITIL-4-Practitioner-Deployment-Management practice test.

Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions

(Q18-Q23):

NEW QUESTION # 18

[Apply Deployment Management Processes]

An organization is deploying new software and new servers to support a service that will be launched soon. Which TWO of these activities should the organization conduct as part of the 'verification of the service components' activity of the 'deployment lifecycle management' process?

Checking that the correct models of server have been supplied

Testing the software for defects

Creating a schedule for installing the new servers

Installing the new software to the newly installed servers

- A. 1 and 2
- B. 3 and 4
- C. 1 and 4
- D. 2 and 3

Answer: A

Explanation:

In ITIL 4, the 'verification of service components' activity within the deployment lifecycle management process ensures that delivered components meet specifications before deployment. The correct activities are:

Activity 1 (Checking that the correct models of server have been supplied): Part of verification, as it confirms that the hardware components match requirements.

Activity 2 (Testing the software for defects): Part of verification, as it ensures the software is functional and free of critical issues before deployment.

Activity 3 (Creating a schedule for installing the new servers): Incorrect, as scheduling is a planning activity, not verification.

Activity 4 (Installing the new software to the newly installed servers): Incorrect, as installation is part of the deployment execution, not verification.

NEW QUESTION # 19

[Apply Deployment Management Processes]

What should be done if a newly developed deployment model cannot be tested for technical reasons?

- A. Automate the activities of the new model before it is used
- B. Closely monitor the first few uses of the new model
- C. Carry out test deployments to see if the model works correctly
- D. Only use the new model after a way to test it has been found

Answer: B

Explanation:

When a newly developed deployment model cannot be tested due to technical limitations, ITIL 4 emphasizes a risk-based approach to deployment management to ensure stability and minimize disruption. Option C, closely monitoring the first few uses of the new model, aligns with ITIL 4's guidance to proceed cautiously when full testing is not feasible. This approach allows the organization to deploy the model in a controlled environment, observe its performance, and quickly address any issues, thereby reducing risk while gathering real-world data.

Option A (Only use the new model after a way to test it has been found): While testing is ideal, delaying deployment indefinitely until a testing method is found may not be practical, especially if business needs require timely deployment. This option is overly restrictive and does not balance risk with operational demands.

Option B (Carry out test deployments to see if the model works correctly): Conducting test deployments assumes testing is possible, which contradicts the question's premise that testing cannot be done for technical reasons. This makes the option invalid.

Option C (Closely monitor the first few uses of the new model): This is the most pragmatic approach, as it allows deployment with safeguards like monitoring to mitigate risks, aligning with ITIL's focus on value delivery and risk management.

Option D (Automate the activities of the new model before it is used): Automating an untested model could amplify risks, as automation without validation may propagate errors across environments.

NEW QUESTION # 20

[Understand the Key Concepts of Deployment Management]

Which is a key feature of continuous deployment which is not found in other CI/CD stages?

- A. It allows individual decisions about software releases
- B. It predominantly uses staging environments
- C. It automatically tests software code
- **D. It enables users to benefit immediately from changes**

Answer: D

Explanation:

Continuous deployment (CD) in ITIL 4 is the most advanced stage of the CI/CD pipeline, where every validated change is automatically deployed to production without manual intervention. The key feature unique to continuous deployment, not found in continuous integration or continuous delivery, is that it enables users to benefit immediately from changes (Option B), as changes reach production instantly after passing automated tests.

Option A (It automatically tests software code): Incorrect, as automated testing is a feature of continuous integration and continuous delivery, not unique to continuous deployment.

Option B (It enables users to benefit immediately from changes): Correct, as continuous deployment automatically pushes validated changes to production, delivering value to users without delay, unlike other CI/CD stages.

Option C (It predominantly uses staging environments): Incorrect, as continuous deployment minimizes reliance on staging environments, deploying directly to production.

Option D (It allows individual decisions about software releases): Incorrect, as continuous deployment eliminates manual release decisions, relying on automation for consistency.

NEW QUESTION # 21

[Use Tools and Techniques for Deployment]

An organization is facing errors and delays when deploying software. An investigation has shown that these are often caused by the need for unplanned manual configuration of the target environments. What is the BEST recommendation for the organization to improve the success rate of deployments?

- **A. Leverage Infrastructure as Code**
- B. Integrate build, test, and deployment activities
- C. Automate the CI/CD pipeline
- D. Use incremental deployments

Answer: A

Explanation:

The issue of errors and delays due to unplanned manual configuration of target environments points to inconsistent or poorly managed environments. ITIL 4 recommends leveraging Infrastructure as Code (IaC) (Option A) to address this, as IaC automates and standardizes environment provisioning, ensuring consistency and reducing manual errors.

Option A (Leverage Infrastructure as Code): Correct, as IaC (e.g., using tools like Terraform or Ansible) defines environments in code, enabling repeatable, error-free setups and directly addressing the problem of manual configuration errors.

Option B (Use incremental deployments): Incorrect, as incremental deployments focus on releasing smaller changes but do not address the root cause of environment configuration issues.

Option C (Integrate build, test, and deployment activities): Incorrect, as while integration improves pipeline flow, it does not specifically resolve manual configuration errors in target environments.

Option D (Automate the CI/CD pipeline): Incorrect, as automating the pipeline is a broader solution that may include IaC, but it is not specific enough to address the environment configuration issue directly.

NEW QUESTION # 22

[Measure and Improve Deployment Management]

An organization has an objective to create and use deployment approaches that would fit the needs of the organization and the context. How should the organization assess if this objective is achieved?

- A. By measuring percentage of deployments which did not follow the agreed policies and models
- B. By analyzing the adherence to deployment schedules
- **C. By asking stakeholders about their satisfaction with deployment lead times**
- D. By looking at the deployment backlog throughput

Answer: C

Explanation:

ITIL 4 emphasizes stakeholder satisfaction as a key indicator of whether a practice meets organizational needs and context, as it reflects the value delivered to users and the business. Option B, asking stakeholders about their satisfaction with deployment lead times, directly assesses whether deployment approaches are effective and aligned with expectations, making it the best method to evaluate the objective.

Option A (By looking at the deployment backlog throughput): Incorrect, as throughput measures efficiency but does not directly indicate whether the deployment approach fits the organization's needs or context.

Option B (By asking stakeholders about their satisfaction with deployment lead times): Correct, as stakeholder feedback on lead times reflects whether deployments are timely and valuable, aligning with ITIL 4's focus on value co-creation.

Option C (By measuring the percentage of deployments which did not follow the agreed policies and models): Incorrect, as non-compliance indicates process issues but does not directly assess fit with organizational needs or stakeholder satisfaction.

Option D (By analyzing the adherence to deployment schedules): Incorrect, as schedule adherence measures operational performance, not whether the approach meets broader contextual needs.

NEW QUESTION # 23

.....

In order to ensure the quality of ITIL-4-Practitioner-Deployment-Management actual exam, we have made a lot of efforts. Our company spent a great deal of money on hiring hundreds of experts and they formed a team to write the work. The qualifications of these experts are very high. They have rich knowledge and rich experience on ITIL-4-Practitioner-Deployment-Management study guide. These experts spent a lot of time before the ITIL-4-Practitioner-Deployment-Management Study Materials officially met with everyone. And we have made scientific arrangements for the content of the ITIL-4-Practitioner-Deployment-Management actual exam. You will be able to pass the ITIL-4-Practitioner-Deployment-Management exam with our excellent ITIL-4-Practitioner-Deployment-Management exam questions.

ITIL-4-Practitioner-Deployment-Management Reliable Test Sample: <https://www.actualtestsit.com/Peoplecert/ITIL-4-Practitioner-Deployment-Management-exam-prep-dumps.html>

Here are some vital points of our ITIL-4-Practitioner-Deployment-Management actual exam questions, If you choose the product of our company, passing the ITIL-4-Practitioner-Deployment-Management exam won't be a dream, If your time is tension, you can just rely on the ITIL-4-Practitioner-Deployment-Management sure study material for preparation, We sometimes are likely to be confronted with such a thing that we cannot get immediate reply or effective solution methods when asking help for our buyers about our ITIL-4-Practitioner-Deployment-Management Reliable Test Sample ITIL-4-Practitioner-Deployment-Management Reliable Test Sample - ITIL 4 Practitioner: Deployment Management test pdf vce, You may be touched to apply for ITIL-4-Practitioner-Deployment-Management exams and buy accurate actual test.

Wireless Frame Headers: A look at the headers used in wireless transmissions, We have free demos of the ITIL-4-Practitioner-Deployment-Management Exam Questions to download, Here are some vital points of our ITIL-4-Practitioner-Deployment-Management actual exam questions.

Excellent ITIL-4-Practitioner-Deployment-Management Sample Questions Help You to Get Acquainted with Real ITIL-4-Practitioner-Deployment-Management Exam Simulation

If you choose the product of our company, passing the ITIL-4-Practitioner-Deployment-Management exam won't be a dream, If your time is tension, you can just rely on the ITIL-4-Practitioner-Deployment-Management sure study material for preparation.

We sometimes are likely to be confronted with such a thing that we cannot ITIL-4-Practitioner-Deployment-Management get immediate reply or effective solution methods when asking help for our buyers about our ITIL Practitioner Level ITIL 4 Practitioner: Deployment Management test pdf vce.

You may be touched to apply for ITIL-4-Practitioner-Deployment-Management exams and buy accurate actual test.
