

ACP-120 PDF & ACP-120 Fragenpool

ATLASSIAN ACP-120 Jira Cloud Administrator 1

New Exam ATLASSIAN ACP-120 Braindumps & ACP-120 Certification Materials

The latest ACP-120 dumps collection covers everything you need to overcome the difficulty of real questions and certification exam. Accurate ACP-120 test answers are tested and verified by our professional experts with the high technical knowledge and rich experience. You may get answers from other vendors, but our [ACP-120 braindumps pdf](#) are the most reliable training materials for your exam preparation.

You will get your hands on the international ACP-120 certificate you want. Perhaps you can ask the people around you that ACP-120 study engine have really helped many people pass the exam. Of course, you can also experience it yourself. Next, allow me to introduce our [ACP-120 Training Materials](#). First, our ACP-120 practice braindumps have varied versions as the PDF, software and APP online which can satisfy different needs of our customers. Secondly, the price is quite favourable.

Die hervorragende Qualität von ATLASSIAN ACP-120 garantiert den guten Ruf der Pass4Test. Dank erlässliches Kundendienstes behalten wir viele Stammkunden. Viele davon haben ATLASSIAN ACP-120 Prüfungssoftware benutzt. Diese gut gekaufte Software ist eine unserer ausgezeichneten Produkte. ATLASSIAN ACP-120 Prüfung ist heutzutage sehr populär, weil das Zertifikat eine bedeutende Rolle in Ihrem Berufsleben im IT-Bereich spielt. Jetzt können Sie auf unserer offiziellen Webseite die neuesten Informationen über ATLASSIAN ACP-120 erfahren!

Um zertifiziert zu werden, müssen Einzelpersonen ein solides Verständnis der JIRA-Cloud-Verwaltung haben, einschließlich Benutzerverwaltung, Projektkonfiguration, Problemtypen, Workflows, Berechtigungen und Add-Ons. Die Prüfung wurde entwickelt, um das Wissen und die Erfahrung der Kandidaten in diesen Bereichen sowie ihre Fähigkeit zu testen, gemeinsame Jira -Cloud -Probleme zu beheben und zu lösen. Nachdem die Prüfung bestanden hat, erhalten die Kandidaten ein Zertifikat, das ihre Fähigkeiten in der Jira Cloud -Verwaltung nachweist, die dazu beitragen kann, ihre Karriereaussichten zu steigern und ihre Glaubwürdigkeit als Jira Cloud -Experte zu erhöhen.

Die ATLASSIAN ACP-120 (Jira Cloud Administrator) Prüfung ist eine wichtige Zertifizierung für Personen, die mit Jira Cloud arbeiten. Sie bietet einen anerkannten Standard für Kompetenz im Bereich der Jira Cloud-Verwaltung und kann dazu beitragen, das Fachwissen des Kandidaten potenziellen Arbeitgebern zu demonstrieren. Mit ihrer umfassenden Abdeckung von Jira Cloud-Verwaltungsthemen ist die ACP-120-Prüfung ein wichtiger Schritt für alle, die ein zertifizierter Jira Cloud-Administrator werden möchten.

ACP-120 Fragenpool - ACP-120 PDF Testsoftware

Nun ist die ATlassian ACP-120 Zertifizierungsprüfung eine beliebte Prüfung in der IT-Branche. Viele IT-Fachleute wollen das ATlassian ACP-120 Zertifikat erhalten. So ist die ATlassian ACP-120 Zertifizierungsprüfung eine beliebte Prüfung. Das ATlassian ACP-120 Zertifikat ist sehr hilfreich, um Ihre Arbeit in der IT-Industrie zu verbessern und Ihr Gehalt zu erhöhen und Ihrem Leben eine zuverlässige Garantie zu geben.

ATLASSIAN Jira Cloud Administrator ACP-120 Prüfungsfragen mit Lösungen (Q43-Q48):

43. Frage

A project has hundreds of old completed issues which are cluttering up the reports, searches, and dashboards. The project administrator has the following requirements:

1. He wants to hide the old issues.
2. He wants to unhide issues, if needed.
3. He wants to control whether he himself sees the hidden issues, so they do not clutter his own daily work.

Which three configurations, when combined, will meet these requirements? (Choose three.)

- A. project permission
- B. project role
- C. security level
- D. global permission
- E. workflow condition
- F. group

Antwort: A,B,F

44. Frage

You created a new "Create a new issue or add a comment to an existing issue" mail handler. What two fields have specific settings in the handler? (Choose two.)

- A. Custom Field
- B. Watchers
- C. Priority
- D. Reporter
- E. Epic Link

Antwort: C,D

Begründung:

The question pertains to configuring a "Create a new issue or add a comment to an existing issue" mail handler in Jira Software Cloud. Mail handlers process incoming emails to create issues or add comments, and certain fields can be specifically configured to control how the handler behaves. According to Jira Cloud documentation, the two fields with specific settings in this type of mail handler are Reporter and Priority.

* Explanation of the Correct Answers:

* Reporter (Option C):

* The Reporter field specifies the user who is set as the reporter of the issue created by the mail handler. In the mail handler configuration, you can define whether the reporter is set to a default user, derived from the email's "From" address (if the email address matches a Jira user), or another specified user.

* Exact Extract from Documentation:

Configuring an email handler

When setting up a mail handler like "Create a new issue or add a comment to an existing issue," you can configure the following settings:

- * Reporter: Specify the user who will be set as the reporter for new issues. Options include:
 - * The user associated with the email's "From" address (if they have a Jira account).
 - * A default user (e.g., a project lead or a specific user account).

* If no valid user is found, the handler can be configured to reject the email or use a fallback user. This setting ensures that the issue is attributed to the correct user as the reporter. (Source: Atlassian Support Documentation, "Configure email handlers in Jira Cloud")

* Why This Fits: The Reporter field is a critical setting in the mail handler, as it determines who is recorded as creating the issue, which affects permissions, notifications, and reporting.

* Priority (Option D):

* The Priority field allows you to set a default priority for issues created by the mail handler if the email does not explicitly specify a priority. This ensures that new issues have a consistent priority unless overridden by the email content.

* Exact Extract from Documentation:

Field settings for mail handlers

For the "Create a new issue or add a comment to an existing issue" handler, you can specify default values for certain fields, including:

* Priority: Set a default priority for new issues (e.g., Medium, High). If the email contains a specific priority value (e.g., via a keyword or mapping), it can override the default. These settings allow you to control the behavior of issue creation and ensure consistency in field values. (Source: Atlassian Support Documentation, "Configure email handlers in Jira Cloud")

* Why This Fits: The Priority field is explicitly configurable in the mail handler to ensure that new issues are assigned an appropriate priority, making it one of the two fields with specific settings.

* Why Other Options Are Incorrect:

* Epic Link (Option A):

* The Epic Link field is not specifically configurable in the mail handler settings. While you can map email content to fields like Epic Link using advanced configurations (e.g., regex or scripting in Automation), it is not a standard field with specific settings in the mail handler configuration interface.

* Extract from Documentation:

Mail handlers allow mapping of email content to standard fields like Summary, Description, or Priority. Advanced field mappings, such as Epic Link, require custom automation rules or third-party apps. (Source: Atlassian Support Documentation, "Automate email processing with Jira Automation")

* Custom Field (Option B):

* While custom fields can sometimes be populated via email content (e.g., through regex or automation), the mail handler's standard configuration does not provide specific settings for custom fields. The handler focuses on system fields like Reporter and Priority.

* Extract from Documentation:

Custom fields are not directly supported in the default mail handler settings. To populate custom fields, you may need to use Jira Automation or a third-party mail handler app. (Source: Atlassian Support Documentation, "Configure email handlers in Jira Cloud")

* Watchers (Option E):

* The Watchers field is not a configurable setting in the mail handler. You cannot specify default watchers or automatically add watchers based on email content in the standard mail handler configuration. Watchers are typically managed manually or via automation rules.

* Extract from Documentation:

Watchers are not a configurable field in mail handlers. To add watchers automatically, use Jira Automation or a workflow post function. (Source: Atlassian Support Documentation, "Configure notifications and watchers")

* Additional Notes:

* The "Create a new issue or add a comment to an existing issue" mail handler is one of several mail handler types in Jira Cloud. Its configuration focuses on ensuring that issues are created with the correct metadata (e.g., Reporter, Priority) and that comments are added to existing issues based on issue keys in the email subject.

* Configuring the Reporter and Priority fields ensures that issues created via email align with project workflows and notification schemes.

45. Frage

You renamed a value in the Resolution field from Done to Finished. What might need to be updated as a result?

- A. Saved filters
- B. Issue detail view
- C. Issues in team-managed projects
- D. Issue Statistics gadgets
- E. Workflow post functions

Antwort: A

Begründung:

Renaming a value in the Resolution field (from Done to Finished) changes its display name globally in Jira Software Cloud. This can impact configurations or features that reference the resolution value by name, particularly in JQL queries. The element most likely to need updating is saved filters (Option B), as they often use JQL queries that include resolution values.

* Explanation of the Correct Answer (Option B):

* Saved filters often use JQL queries that reference resolution values (e.g., resolution = Done). If the Resolution field value is renamed from Done to Finished, any filters using resolution = Done will no longer match issues with the renamed resolution (Finished), as the old value is no longer valid. These filters must be updated to use resolution = Finished to continue returning the correct issues.

* Exact Extract from Documentation:

Manage resolutions in Jira Cloud

Resolutions are global values used in the Resolution field to indicate an issue's resolution state.

Impact of renaming a resolution:

* JQL queries in filters, boards, or gadgets referencing the resolution name (e.g., resolution = Done) will no longer match issues if the value is renamed (e.g., to Finished). To update:

* Go to Issues > Manage filters.

* Edit filters to use the new resolution name (e.g., resolution = Finished). Note: Renaming a resolution affects all projects and requires updating JQL-based configurations. (Source:

Atlassian Support Documentation, "Manage resolutions in Jira Cloud")

* Why This Fits: Renaming a resolution value impacts saved filters that use JQL queries referencing the old value, requiring updates to maintain functionality, making Option B the correct answer.

* Why Other Options Are Incorrect:

* Workflow post functions (Option A):

* Workflow post functions can set the Resolution field (e.g., Set Issue Resolution to Done).

These post functions typically use the resolution's internal ID, not its display name, so renaming Done to Finished does not require changes to post functions.

* Extract from Documentation:

Post functions reference resolution IDs, not names. Renaming a resolution does not affect workflow configurations.

(Source: Atlassian Support Documentation, "Configure advanced work item workflows")

* Issue detail view (Option C):

* The issue detail view displays the Resolution field value as configured. Renaming Done to Finished updates the display automatically without requiring manual changes to the issue detail view or its configuration (e.g., issue layout).

* Extract from Documentation:

The issue detail view reflects the current resolution name automatically. No changes are needed after renaming a resolution.

(Source: Atlassian Support Documentation, "Configure issue layouts in Jira Cloud")

* Issue Statistics gadgets (Option D):

* Issue Statistics gadgets (e.g., on dashboards) can display data based on fields like Resolution. While gadgets may reference resolution values in their configuration, they typically use resolution IDs or dynamically update to reflect the renamed value. The impact is less direct than with saved filters, which rely on explicit JQL queries.

* Extract from Documentation:

Gadgets like Issue Statistics use field values or IDs. Renaming a resolution may not require gadget updates unless JQL queries are explicitly used.

(Source: Atlassian Support Documentation, "Manage dashboards in Jira Cloud")

* Issues in team-managed projects (Option E):

* Resolutions are global and apply to both company-managed and team-managed projects.

Renaming Done to Finished updates the value for all issues, including those in team-managed projects, without requiring changes to the issues themselves. The change is reflected automatically.

* Extract from Documentation:

Resolutions are global and apply to all projects. Renaming a resolution updates its display for all issues without requiring issue-level changes.

(Source: Atlassian Support Documentation, "Manage resolutions in Jira Cloud")

* Additional Notes:

* Renaming a resolution is done in Settings > Issues > Resolutions and requires Jira administrator privileges.

* Other JQL-based features (e.g., automation rules, boards) may also be impacted if they reference the resolution name, but saved filters are the most commonly affected.

* To minimize impacts, use resolution IDs in JQL queries (e.g., resolution = 10000), though this is less common.

46. Frage

Many projects share the same permission scheme and workflow scheme.

The requirements in those projects are:

- Only Translators should be able to use the Translation workflow transition.
- The same team of Translators work across all the projects.

How should Translators be configured to meet these requirements?

- A. As a Group custom field
- B. As single users
- C. As a User custom field
- D. As a group
- E. As a project role

Antwort: E

Begründung:

Reference: <https://confluence.atlassian.com/adminjiracloud/configuring-projects-776636280.html>

47. Frage

You are adding a user to Jira software using the invite users method in user management Which setting on the page guarantees the user access to Jira software (Choose one)

- A. Product access
- B. Group membership
- C. Email address
- D. Email domains

Antwort: A

48. Frage

.....

In den letzten Jahren ist die Konkurrenz in der IT-Branche immer heftiger geworden. IT-Zertifizierung ist ganz notwendig in der IT-Branche. Wenn Sie im Beruf eine gute Beförderungsmöglichkeit bekommen wollen, können Sie die Schulungsunterlagen zur ATlassian ACP-120 Zertifizierungsprüfung von Pass4Test wählen, um die ACP-120 Zertifizierungsprüfung zu bestehen. Unsere Schulungsunterlagen enthalten alle Fragen, die die ATlassian ACP-120 Zertifizierungsprüfung erfordert. So können Sie die ACP-120 Prüfung 100% bestehen.
