- papilloedema
- hard exudates
- cotton wool spots

TOD heart - - LVH

- CAD
- MI
- rhythm disorders
- aortic and PAD
- AAA

TOD kidneys - - CKD

As the talent competition increases in the labor market, it has become an accepted fact that the 2V0-16.25 certification has become an essential part for a lot of people, especial these people who are looking for a good job, because the certification can help more and more people receive the renewed attention from the leader of many big companies. So it is very important for a lot of people to gain the 2V0-16.25 certification. We must pay more attention to the certification and try our best to gain the 2V0-16.25 Certification. First of all, you are bound to choose the best and most suitable study materials for yourself to help you prepare for your exam. Now we would like to introduce the 2V0-16.25 certification guide from our company to you. We sincerely hope that our study materials will help you through problems in a short time.

Furthermore, applicants spend much time searching for VMware vSphere Foundation 9.0 Administrator 2V0-16.25 Dumps updated study material, or they waste time using outdated practice material. During VMware VMware vSphere Foundation 9.0 Administrator exam preparation, every second is valuable. If you prepare with our VMware vSphere Foundation 9.0 Administrator 2V0-16.25 Actual Dumps, we ensure that you will become capable to crack the VMware vSphere Foundation 9.0 Administrator 2V0-16.25 test within a few days. The VMware vSphere Foundation 9.0 Administrator 2V0-16.25 price is affordable.

2V0-16.25 Reliable Exam Vce - Dump 2V0-16.25 Collection

The 2V0-16.25 Exam is one of the best platforms that have been helping the VMware 2V0-16.25 exam candidates in their

preparation. Several VMware 2V0-16.25 exam candidates have already passed their VMware vSphere Foundation 9.0 Administrator exam with good scores. They all used the Exams. 2V0-16.25 Exam Questions and got success in the final VMware 2V0-16.25 exam easily.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
Topic 2	IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 3	VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.
Topic 4	Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 5	Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q17-Q22):

NEW QUESTION # 17

An administrator is tasked with deploying a VMware Cloud Foundation (VCF) Operations for Logs appliance into vSphere Foundation.

After downloading the .ova, which component does the administrator use to deploy the file?

- A. VCF Operations
- B. VCF Fleet Management
- C. vSphere Client
- D. VCF Automation

Answer: C

Explanation:

To deploy the VCF Operations for Logs OVA appliance:

- * The vSphere Client is used to deploy .ova and .ovf templates directly into a vCenter environment.
- * After deployment, the appliance can be configured and integrated with VCF.

Other options:

- * A. VCF Fleet Management# Used for multi-instance management, not OVA deployment.
- * C. VCF Automation# Provides automation workflows, not appliance deployment.
- * D. VCF Operations# Monitoring and analytics platform, not used for OVA installs.

References:

VMware Cloud Foundation 9.0 -Deploying VCF Operations for Logs Appliance VMware Docs: Deploy OVF/OVA Templates Using vSphere Client

NEW QUESTION # 18

An administrator is tasked to configure Service Discovery in VMware Cloud Foundation (VCF) Operations for Linux Guest Operating Systems. For security reasons a non-root user needs to be used and all required steps for the Guest OS have already been completed.

What are the two steps the administrator needs to take? (Choose two.)

- A. Deactivate Use Sudo in the Service Discovery instance.
- **B. Activate Use Sudo in the Service Discovery instance.**
- **C. Activate Service Discovery in the required VCF Operations vCenter instance.**
- D. Activate Use Sudo in the vCenter instance.
- E. Activate Service Discovery in the required VCF Operations NSX instance.

Answer: B,C

Explanation:

To configure Service Discovery for Linux Guest OS in VCF Operations using a non-root user:

- * Activate Service Discovery in the vCenter instance to start discovery operations. (B)
 - * Enable Use Sudo in the Service Discovery instance so the non-root account can run necessary privileged commands. (E)
- Other options:
- * A. Activate Use Sudo in vCenter instance# Wrong, this is configured in Service Discovery.
 - * C. Activate in NSX instance# Not applicable; Service Discovery integrates with vCenter.
 - * D. Deactivate Use Sudo# Opposite of required security setting.

References:

VMware Cloud Foundation 9.0 -Service Discovery Setup
VMware Docs: Service Discovery for VMs in vRealize Operations

NEW QUESTION # 19

An administrator is tasked to install a new VMware ESX host to an existing cluster. When the installation is completed, the host is not able to be reached from the vCenter.

When testing the host's management network, the default gateway, primary DNS, and secondary DNS are all unreachable, and the host name cannot be resolved. The VLAN for the management network is set correctly and the adapters are all connected.

What is the first step in troubleshooting this connectivity issue?

- **A. Verify the correct TCP/IP information is configured.**
- B. Reinstall ESX on the host.
- C. Verify the DVS configuration in vCenter.
- D. Disconnect and reconnect the physical network cable.

Answer: A

Explanation:

When a newly installed ESX host cannot be reached and all basic network tests (gateway, DNS, hostname resolution) fail:

- * The first troubleshooting step is to confirm that the management network TCP/IP configuration (IP address, subnet mask, default gateway, DNS servers) is correct.
- * If this is misconfigured, the host will not communicate with vCenter or resolve names.
- * B. Verify DVS configuration in vCenter# Requires host connectivity first.
- * C. Reinstall ESX# Too drastic without confirming networking basics.

* D. Disconnect/reconnect cable# Less likely since VLANs/adapters are reported as connected.

VMware vSphere 9.0 Documentation - Troubleshooting ESXi Network Connectivity VMware KB: ESXi Management Network Troubleshooting

NEW QUESTION # 20

What are the two methods to add a widget to a VMware Cloud Foundation (VCF) Operations for Logs dashboard? (Choose two.)

- A. Import the widget in the dashboard design pane.
- B. Open Management Pack Builder and clone the widget.
- **C. Drag and drop the widget in the dashboard design pane.**
- D. Clone the widget from an existing dashboard.
- **E. Create the widget in Explore Logs and click Add to Dashboard.**

Answer: C,E

Explanation:

Two supported methods exist for adding widgets to VCF Operations for Logs dashboards:

* From Explore Logs- Create a widget (e.g., query result) and select Add to Dashboard. (B)

* Dashboard Design Pane- Use the design interface to drag and drop widgets. (C) Other options:

* A. Clone widget from existing dashboard# Not a supported method.

* D. Import widget in design pane# Import is for dashboards, not individual widgets.

* E. Management Pack Builder# Not related to Logs dashboard widgets.

NEW QUESTION # 21

An administrator is tasked with importing a vSphere Lifecycle Manager image and applying it to a cluster containing six hosts, with two of the hosts in maintenance mode. The administrator uses the vSphere Client, navigates to the cluster, and edits the remediation settings to enable Parallel Remediation and clicks the Remediate All button to execute the remediation process.

What is the expected result of this remediation process?

- A. The image is remediated on the four hosts not in maintenance mode, in sequence. The hosts in maintenance mode are not remediated.
- B. The image is remediated on the hosts in maintenance mode in parallel, and when completed the hosts not in maintenance mode are remediated in parallel.
- **C. The image is remediated on the hosts in maintenance mode in parallel. The hosts not in maintenance mode are not remediated.**
- D. The image is remediated on the four hosts not in maintenance mode, in parallel. The hosts in maintenance mode are not remediated.

Answer: C

Explanation:

When using vSphere Lifecycle Manager (vLCM) with Parallel Remediation enabled, the following rules apply:

* Parallel remediation only applies to ESXi hosts that are already in Maintenance Mode.

* vLCM does not put hosts into Maintenance Mode automatically in this mode.

* Similarly, it does not exit Maintenance Mode automatically after remediation.

* Hosts not in Maintenance Mode are skipped.

* If Parallel Remediation is activated, vLCM remediates only those hosts that are already in Maintenance Mode.

* Any hosts that are not in Maintenance Mode remain untouched.

* Remediation happens in parallel for all eligible hosts.

* In this case, two of the six hosts are in Maintenance Mode. Those two hosts will be remediated in parallel.

* The remaining four hosts (not in Maintenance Mode) will not be remediated at all.

Why the other options are incorrect:

* A. Four hosts not in maintenance mode are remediated in parallel## Incorrect. Hosts must already be in Maintenance Mode to be remediated.

* B. Hosts in maintenance mode first, then non-maintenance hosts## Incorrect. Non-maintenance mode hosts are skipped, not

remediated after.

* C. Four hosts remediated sequentially, others skipped##Incorrect. Parallel Remediation does not touch non-maintenance mode hosts.

* D. Hosts in maintenance mode remediated in parallel; others skipped##Correct and matches VMware documentation.

NEW QUESTION # 22

.....

Our 2V0-16.25 practice questions are not famous for nothing. As long as you choose our 2V0-16.25 study guide, you will find that the exam questions and answers are always the most accurate and up-to-date. It is all due to the hard work of our professionals who always keep a close eye on the updating. The 2V0-16.25 learning braindumps are regularly updated in line with the changes introduced in the exam contents. You will always find our 2V0-16.25 exam simulating highly relevant to your needs.
