

Actual Amazon SAP-C02 Exam Dumps—Pass Exam With Good Scores

P.S. Free & New SAP-C02 dumps are available on Google Drive shared by ActualtestPDF: <https://drive.google.com/open?id=1z4evJarTA4J8azfCTX41OGOXaYRrpHH>

The rapid development of information will not infringe on the learning value of our SAP-C02 exam questions, because our customers will have the privilege to enjoy the free update for one year. You will receive the renewal of SAP-C02 study files through the email. And our SAP-C02 study files have three different version can meet your demands. Firstly, PDF version is easy to read and print. Secondly software version does not limit to the number of installed computers, and it simulates the real SAP-C02 Actual Test guide, but it can only run on Windows operating system. Thirdly, online version supports for any electronic equipment and also supports offline use at the same time. For the first time, you need to open SAP-C02 exam questions in online environment, and then you can use it offline. All in all, helping our candidates to pass the exam successfully is what we always looking for. SAP-C02 actual test guide is your best choice.

We own three versions of the SAP-C02 exam torrent for you to choose. They conclude PDF version, PC version and APP online version. You can choose the most convenient version of the SAP-C02 quiz torrent. The three versions of the SAP-C02 test prep boost different strengths and you can find the most appropriate choice. For example, the PDF version is convenient for download and printing and is easy and convenient for review and learning. It can be printed into papers and is convenient to make notes. You can learn the SAP-C02 Test Prep at any time or place and repeatedly practice. The version has no limit for the amount of the persons and times. The PC version of SAP-C02 quiz torrent is suitable for the computer with Windows system. It can simulate real operation exam atmosphere and simulate exams.

Realistic Pass SAP-C02 Exam - 100% Pass Amazon Valid AWS Certified Solutions Architect - Professional (SAP-C02) Test Review

We regularly update our valid Amazon SAP-C02 certification test preparation material to keep them in line with the current Amazon SAP-C02 exam content and industry standards. Professionals from different countries give us their valuable feedback to refine SAP-C02 Actual Dumps even more.

Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample

Questions (Q371-Q376):

NEW QUESTION # 371

Example Corp. has an on-premises data center and a VPC named VPC A in the Example Corp. AWS account. The on-premises network connects to VPC A through an AWS Site-To-Site VPN. The on-premises servers can properly access VPC A. Example Corp. just acquired AnyCompany, which has a VPC named VPC B. There is no IP address overlap among these networks. Example Corp. has peered VPC A and VPC B.

Example Corp. wants to connect from its on-premise servers to VPC B. Example Corp. has properly set up the network ACL and security groups.

Which solution will meet this requirement with the LEAST operational effort?

- A. Create a transit gateway. Attach the Site-to-Site VPN, VPC A, and VPC B to the transit gateway. Update the transit gateway route tables for all networks to add IP range routes for all other networks.
- B. Modify the Site-to-Site VPN's virtual private gateway definition to include VPC A and VPC B. Split the two routers of the virtual private gateway between the two VPCs.
- C. Create a transit gateway. Create a Site-to-Site VPN connection between the on-premises network and VPC B, and connect the VPN connection to the transit gateway. Add a route to direct traffic to the peered VPCs, and add an authorization rule to give clients access to the VPCs A and B.
- D. Update the route tables for the Site-to-Site VPN and both VPCs for all three networks. Configure BGP propagation for all three networks. Wait for up to 5 minutes for BGP propagation to finish.

Answer: A

Explanation:

This option will allow you to connect from the on-premises servers to VPC B with the least operational effort, as it utilizes the transit gateway to connect all networks and allows for easy updates to the route tables. BGP propagation is not necessary and the use of transit gateway will simplify the traffic routing.

NEW QUESTION # 372

A company is running an application in the AWS Cloud. The application collects and stores a large amount of unstructured data in an Amazon S3 bucket. The S3 bucket contains several terabytes of data and uses the S3 Standard storage class. The data increases in size by several gigabytes every day. The company needs to query and analyze the data. The company does not access data that is more than 1 year old. However, the company must retain all the data indefinitely for compliance reasons.

Which solution will meet these requirements MOST cost-effectively?

- A. Use an AWS Glue Data Catalog and Amazon Athena to query the data. Create an S3 Lifecycle policy to transition data that is more than 1 year old to S3 Glacier Deep Archive.
- B. Use S3 Select to query the data. Create an S3 Lifecycle policy to transition data that is more than 1 year old to S3 Glacier Deep Archive.
- C. Use Amazon Redshift Spectrum to query the data. Create an S3 Lifecycle policy to transition data that is more than 1 year old to S3 Glacier Deep Archive.
- D. Use Amazon Redshift Spectrum to query the data. Create an S3 Lifecycle policy to transition data that is more than 1 year old to S3 Intelligent-Tiering.

Answer: A

Explanation:

Generally, unstructured data should be converted structured data before querying them. AWS Glue can do that.

NEW QUESTION # 373

A company is running an application in the AWS Cloud. The core business logic is running on a set of Amazon EC2 instances in an Auto Scaling group. An Application Load Balancer (ALB) distributes traffic to the EC2 instances. Amazon Route 53 record `api.example.com` is pointing to the ALB.

The company's development team makes major updates to the business logic. The company has a rule that when changes are deployed, only 10% of customers can receive the new logic during a testing window. A customer must use the same version of the business logic during the testing window.

How should the company deploy the updates to meet these requirements?

- A. Create a second ALB, and deploy the new logic to a set of EC2 instances in a new Auto Scaling group. Configure the ALB to distribute traffic to the EC2 instances. Update the Route 53 record to use weighted routing, and point the record to both of the ALBs.
- **B. Create a second target group that is referenced by the ALB. Deploy the new logic to EC2 instances in this new target group. Update the ALB listener rule to use weighted target groups. Configure ALB target group stickiness.**
- C. Create a new launch configuration for the Auto Scaling group. Specify the launch configuration to use the AutoScalingRollingUpdate policy, and set the MaxBatchSize option to 10. Replace the launch configuration on the Auto Scaling group. Deploy the changes.
- D. Create a second Auto Scaling group that is referenced by the ALB. Deploy the new logic on a set of EC2 instances in this new Auto Scaling group. Change the ALB routing algorithm to least outstanding requests (LOR). Configure ALB session stickiness.

Answer: B

NEW QUESTION # 374

A data analytics company has an Amazon Redshift cluster that consists of several reserved nodes. The cluster is experiencing unexpected bursts of usage because a team of employees is compiling a deep audit analysis report. The queries to generate the report are complex read queries and are CPU intensive.

Business requirements dictate that the cluster must be able to service read and write queries at all times. A solutions architect must devise a solution that accommodates the bursts of usage. Which solution meets these requirements MOST cost-effectively?

- A. Deploy an AWS Lambda function to add capacity to the Amazon Redshift cluster by using a classic resize operation when the cluster's CPU metrics in Amazon CloudWatch reach 80%.
- **B. Turn on the Concurrency Scaling feature for the Amazon Redshift cluster.**
- C. Deploy an AWS Lambda function to add capacity to the Amazon Redshift cluster by using an elastic resize operation when the cluster's CPU metrics in Amazon CloudWatch reach 80%.
- D. Provision an Amazon EMR cluster. Offload the complex data processing tasks.

Answer: B

Explanation:

NEW QUESTION # 375

A solutions architect is migrating an existing workload to AWS Fargate. The task can only run in a private subnet within the VPC where there is no direct connectivity from outside the system to the application. When the Fargate task is launched, the task fails with the following error:

How should the solutions architect correct this error?

- A. Ensure the network mode is set to bridge in the Fargate task definition.
- B. Ensure the task is set to ENABLED for the auto-assign public IP setting when launching the task.
- **C. Ensure the task is set to DISABLED (or the auto-assign public IP setting when launching the task). Configure a NAT gateway in the public subnet in the VPC to route requests to the internet.**
- D. Ensure the task is set to DISABLED for the auto-assign public IP setting when launching the task. Configure a NAT gateway in the private subnet in the VPC to route requests to the internet.

Answer: C

NEW QUESTION # 376

.....

If you would like to use all kinds of electronic devices to prepare for the SAP-C02 exam, with the online app version of our SAP-C02 study materials, you can just feel free to practice the questions in our SAP-C02 training materials no matter you are using your

mobile phone, personal computer, or tablet PC. In addition, another strong point of the online app version is that it is convenient for you to use even though you are in offline environment. In other words, you can prepare for your SAP-C02 Exam with under the guidance of our SAP-C02 training materials anywhere at any time.
