CheckPoint 156-536 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Introduction to Harmony Endpoint: This section measures the skills of CheckPoint Security Administrators about the fundamental concepts of Harmony Endpoint. It introduces candidates to the capabilities of the Harmony Endpoint solution, which is designed to protect endpoint devices from various cyber threats.
Topic 2	<ul style="list-style-type: none">• Large-Scale Harmony Endpoint Deployment: This domain is aimed at Harmony Endpoint Security Professionals and addresses the challenges associated with deploying Harmony Endpoint at scale. Candidates will learn about strategies for efficient large-scale implementation while maintaining security standards across numerous devices.
Topic 3	<ul style="list-style-type: none">• Deploying Harmony Endpoint Data Security Protection: In this domain, CheckPoint Security Administrators will demonstrate their skills in deploying data security protections within Harmony Endpoint. This includes configuring data loss prevention strategies and ensuring data integrity across endpoints.
Topic 4	<ul style="list-style-type: none">• Harmony Endpoint Management as a Service: This section targets Harmony Endpoint Security Professionals, focusing on managing endpoint security as a service. It covers the cloud-based management capabilities of Harmony Endpoint, allowing for scalable deployment and policy management.
Topic 5	<ul style="list-style-type: none">• Advanced Threat Prevention: CheckPoint Security Administrators will be assessed in this area, which covers advanced techniques for preventing sophisticated threats. This includes leveraging threat intelligence and proactive measures to safeguard endpoints from emerging cyber risks.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which command in CLI session is used to check installed licenses on Harmony Endpoint Management server?

- A. show licenses all
- B. cplic add <license filename>
- C. cplic print +x
- D. cplic print-x

Answer: D

NEW QUESTION # 45

What does pre-boot authentication disable?

- A. Workarounds to computer security
- B. Weak passwords
- C. Identity theft
- D. Incorrect usernames

Answer: A

Explanation:

Pre-boot authentication in Harmony Endpoint disables workarounds to computer security. This is explicitly stated in

theCP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf on page 223, under "Authentication before the Operating System Loads (Pre-boot)," which explains: "only authorized users are given access to information stored on desktops and laptops" by requiring authentication before the OS loads. This prevents unauthorized access attempts that might bypass OS-level security measures, such as booting from alternative media or exploiting OS vulnerabilities-effectively disabling "workarounds to computer security."

* Option B ("Identity theft") is a broader security concern not specifically addressed by pre-boot authentication; it's a potential outcome, not a direct mechanism disabled.

* Option C ("Incorrect usernames") is a user error, not something pre-boot authentication disables; it simply rejects invalid credentials.

* Option D ("Weak passwords") relates to password policy enforcement (covered on page 264), not the function of pre-boot authentication itself.

* Option A ("Workarounds to computer security") is directly supported by the documentation, as pre-boot authentication ensures security at the earliest stage, blocking bypass attempts.

NEW QUESTION # 46

What are the benefits of the Check Point Consolidated Cyber Security Architecture?

- A. Decentralized management
- B. Consolidated network functions
- C. Single policy
- D. Consolidated security functions

Answer: D

Explanation:

The Check Point Consolidated Cyber Security Architecture is designed to integrate multiple security functions into a unified platform. This architecture provides "consolidated security functions," which is its primary benefit. This means it combines endpoint protection, data security, and threat prevention into a single, manageable system, improving efficiency and simplifying security administration for organizations. While

"Consolidated network functions" (A) might sound similar, it's too vague and not the focus of the architecture. "Single policy" (B) is not highlighted as a standalone benefit, and "Decentralized management" (C) contradicts the centralized approach of this architecture. Thus, "Consolidated security functions" (D) is the correct answer, as it aligns directly with the documented advantages.

NEW QUESTION # 47

Which of the following is not protected by the Full Disk Encryption (FDE) software

- 1) Client's user data
- 2) Operating system files
- 3) Temporary files
- 4) Erased files

- A. All of these are protected with FDE
- B. Temporary files
- C. Erased files
- D. Temporary and erased files

Answer: D

NEW QUESTION # 48

Before installing FDE on a client machine, what should administrators make sure of?

- A. That system volumes include at least 32 MB of continuous space
- B. That system volumes include at least 25 MB of continuous space

- C. That system volumes include at least 50 MB of continuous space
- D. That system volumes include at least 36 MB of continuous space

Answer: A

Explanation:

Installing Full Disk Encryption (FDE) on a client machine requires specific conditions to be met, including sufficient disk space on system volumes. The CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf provides an exact specification for this requirement. On page 249, under "Client Requirements for Full Disk Encryption Deployment," the guide explicitly states:

"Ensure that the system volumes have at least 32 MB of continuous free space." This precise requirement confirms that administrators must ensure the system volumes have at least 32 MB of continuous space, making Option A the correct answer. The other options (B, C, and D) list different space values (50 MB, 36 MB, and 25 MB, respectively), none of which are supported by the documentation. The use of "continuous" space emphasizes the need for an uninterrupted block, critical for FDE's operation, further solidifying Option A's accuracy.
