NEW QUESTION # 206
A company is implementing a customer service solution by using Dynamics 365 Customer Service. The company is extending the solution to meet additional business requirements.
The solution has the following requirements:
* Customers can log on to a secure website and view the progress of customer service tickets.
* Refund requests over a certain value can be automatically sent for managerial approval in Microsoft Teams.
* Create a custom page showing a gallery of pictures within the Dynamics 365 Customer Service app.
You need to use Microsoft Power Platform technologies to implement the solution.
Which technology should you use? To answer, drag the appropriate technologies to the correct requirements.
Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NEW QUESTION # 208

You are using Microsoft Copilot Studio to create a copilot for your Power Pages.

You need the copilot to start from the beginning of the conversation if user input is unrecognized.

What should you configure?

- **A. Fallback topic**
- B. Error message
- C. Trigger
- D. AI features

Answer: A

Explanation:

During a conversation, a Microsoft Copilot Studio agent triggers the appropriate topic based on the user's input. If the agent can't determine the user's intent, it prompts the user again. After two prompts, the custom or Copilot agent escalates to a live representative through a system topic called Escalate.

You can customize how the agent behaves when user input doesn't trigger any topic. For example, you can build a catchall topic to capture unrecognized user intent, create a topic to call back-end systems, or route a topic to existing services.

Customize the fallback topic and behavior in the default system Fallback topic.

A fallback topic triggers On Unknown Intent to capture the unrecognized input.
