## Adobe Commerce Developer Professional Sample Questions (Q130-Q135):

### NEW QUESTION # 130

How would a developer add a sensitive environment-specific configuration value on an Adobe Commerce Cloud project?

- A. Add sensitive Environment-specific variable in the Project Web Interface.
- B. Connect to the server using SSH and add the configuration in the app/etc/config.php file.
- C. Use the Cloud CLI for Commerce command Mgento-cloud configset to add the configuration

**Answer: A**

Explanation:

To add a sensitive environment-specific configuration value on an Adobe Commerce Cloud project, the developer should use the Project Web Interface. This interface allows for the secure entry of sensitive data, which is then encrypted and stored securely. This method ensures that sensitive information is not exposed in the codebase or version control.

### NEW QUESTION # 131

An Adobe Commerce developer has added an iframe and included a JavaScript library from an external domain to the website.

After that, they found the following error in the console:

Refused to frame [URL] because it violates the Content Security Policy directive.

In order to fix this error, what would be the correct policy ids to add to the csp\_whitelist.xml file?

- A. frame-ancestors and connect-src
- B. frame-src and script-src
- C. default-src and object-src

**Answer: B**

Explanation:

The Content Security Policy (CSP) in Adobe Commerce (Magento) restricts the types of content that can be loaded on a page to protect against malicious attacks, such as cross-site scripting (XSS). When an iframe is added, and a JavaScript library is loaded from an external source, these resources must be whitelisted explicitly using the csp\_whitelist.xml file.

In this specific case:

\* The frame-src directive controls the sources from which iframes can be embedded. Since the developer is embedding an iframe from an external domain, they need to whitelist this domain for frame-src.

\* The script-src directive controls the sources from which JavaScript files can be loaded. The external JavaScript library must be whitelisted under script-src to allow it to execute.

Therefore, the correct policy IDs to whitelist are:

\* frame-src: to allow the embedding of content from an external domain in an iframe.

\* script-src: to allow the loading and execution of JavaScript files from the external domain.

Here's how to update the csp\_whitelist.xml file with the correct directives:

```
<?xml version="1.0"?>
<whitelist
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsinamespaceSchemaLocation="urn:
magento:module:Magento_Csp/etc/csp_whitelist.xsd"
>
<policy id="frame-src">
<values>
<value id="your-external-domain.com"/>
</values>
</policy>
<policy id="script-src">
<values>
<value id="your-external-domain.com"/>
</values>
</policy>
</whitelist>
```

Replace your-external-domain.com with the actual domain of the external iframe and JavaScript source.

### NEW QUESTION # 132

What will happen if a developer fails to mention the start date in the "From" field when creating a price rule?

- A. The price rule will be saved, but it will not go into effect until the start date is added
- B. The price rule will not be saved.
- **C. The price rule will go into effect as soon as it is saved**

**Answer: C**

Explanation:

If a developer fails to mention the start date in the "From" field when creating a price rule, the price rule will be saved. However, the price rule will not go into effect until the start date is added.

If a developer fails to mention the start date in the "From" field when creating a price rule in Adobe Commerce, the system will default to the current date, and the price rule will go into effect as soon as it is saved. The absence of a start date means there is no delay in the activation of the rule, and it becomes effective immediately upon saving.

### NEW QUESTION # 133

A developer is tasked with creating a new feature in an Adobe Commerce Cloud project. The developer decides to create an integration environment for a better development process.

Which Cloud CLI for Commerce command would the developer use?

- A. `magento-cloud environment:create:branch environment-name > <parent-environment-ID>`
- B. `magento-cloud create:environment-branch <environment-name> <parent-environment-ID>`
- **C. `magento-cloud environment:branch <environment-name> <parent-environment-ID>`**

**Answer: C**

Explanation:

The Cloud CLI for Commerce command that a developer would use to create an integration environment for a better development process is `magento-cloud environment:branch <environment-name> <parent-environment-ID>`. This command creates a new branch in the Git repository and a new environment in the Cloud project, using the specified parent environment as a base. The new environment inherits the code, data, and media files from the parent environment.

To create a new integration environment for development in an Adobe Commerce Cloud project, the developer would use the Cloud CLI for Commerce command: `magento-cloud environment:branch <environment-name> <parent-environment-ID>`. This command creates a new environment by branching from the specified parent environment, providing a separate environment for developing new features or testing without affecting the live site.

### NEW QUESTION # 134

ECE-Tools provides a set of tools that can be used to manage and maintain your Adobe Commerce Cloud environment. What are some of the features provided by ECE-Tools?

- A. Fastly configuration, Applies custom patches and Dump configuration for static content deployment.
- **B. Builds application, Applies custom patches and Dump configuration for static content deployment.**
- C. Builds application, Applies custom patches, and Shows the list of S3 backup tar.gz files.

**Answer: B**

Explanation:

Some of the features provided by ECE-Tools are building application, applying custom patches, and dumping configuration for static content deployment. ECE-Tools is a set of scripts and tools designed to manage and deploy Adobe Commerce Cloud projects. It provides commands for building application code, applying patches for Magento core issues or custom modules, and dumping configuration settings for static content deployment optimization. Verified References: [Magento 2.4 DevDocs] 2 The ECE-Tools package for Adobe Commerce Cloud provides a range of tools and scripts to manage and streamline deployment and maintenance tasks. Among its key features:

\* Application Builds:

\* ECE-Tools handles the build process, which includes compiling the code, preparing static content, and configuring deployment.

\* Applying Custom Patches:

\* It includes capabilities for managing and applying custom patches to the Adobe Commerce application during deployment, which is essential for customization and bug fixes.

\* Dump Configuration for Static Content Deployment:

\* ECE-Tools can dump configuration for static content deployment, optimizing the static content deployment process by handling

configurations and assets efficiently.

\* Why Option A is Correct:

\* Option A lists these core functionalities provided by ECE-Tools. Option B incorrectly includes Fastly configuration, which is managed separately. Option C mentions S3 backups, which are not directly handled by ECE-Tools.
