Free AD0-E724 Test Questions & AD0-E724 Valid Test Voucher

PrepAwayTest offers AD0-E724 actual exam dumps in easy-to-use PDF format. It is a portable format that works on all smart devices. Questions in the AD0-E724 PDF can be studied at any time from any place. Furthermore, Commerce Developer Professional (AD0-E724) PDF exam questions are printable. It means you can avoid eye strain by preparing real questions in a hard copy.

Adobe Commerce Developer Professional Sample Questions (Q35-Q40):

NEW QUESTION # 35

What are the only writeable folders in the application root on a remote Adobe Commerce Cloud project?

• A.

• B.

• C.

Answer: A

Explanation:

For an Adobe Commerce Cloud project, the only writeable folders in the application root on a remote environment are essential for the application to run correctly and store temporary and dynamic data. Among the options given, Option B lists directories that are typically writable: m2-hotfixes, var, pub/static, and app/etc. The m2-hotfixes directory is specifically for Magento Commerce Cloud and is used for applying hotfixes that are executed during the build phase. The var directory contains various logs, sessions, and reports. The pub/static directory holds the compiled static view files, and app/etc contains configuration files that can be modified by the application at runtime.

NEW QUESTION # 36

An Adobe Commerce developer is asked to implement a 15% surcharge for all users from a 'Wholesale' customer group. Keeping best practices in mind, what is a correct to accomplish this?

- A. Create a Cart Price Rule that applies only to the 'Wholesale' group. Specify no conditions for the rule, and in the Actions section, specify for the rule to apply a "Percent of product price discount", with the "Discount Amount" field set to -15.
- B. Declare a new total collector class to calculate the modified total if the current user is in the group, register it in the module's etc/sales .xml file, modify the checkout_cart_index.xml and checkout_index_index.xml layouts to include a new child in the totals block.
- C. Create an Observer to the catalog_product_get_final_price event. Check if the current customer is in the 'Wholesale' group, and if so, retrieve the product from the \$observer->getEventC() data and Call \$product->setData('final_price', \$product->getData('final_price') * 1.15).

Answer: B

Explanation:

The best practice to add a surcharge in Magento is to create a custom total collector that calculates and applies the surcharge. This approach integrates smoothly with Magento's sales and checkout processes.

* Total Collector for Surcharge:

* Creating a new total collector class allows Magento to calculate a custom surcharge and display it in the appropriate sections of the checkout and order summaries.

* Registering this in etc/sales.xml ensures that Magento includes this total during order processing and ensures it's displayed properly on the frontend and backend.

* Why Option A is Correct:

* This approach follows Magento's framework for managing additional charges. It ensures the surcharge is correctly applied and

displayed.

* Options B and C involve less maintainable and less integrated approaches. Option B misuses a Cart Price Rule, and Option C uses an observer, which does not fit well with Magento's total calculation architecture.

NEW QUESTION # 37

A Project Architect needs to add a new developer who needs to be able to push code in an Adobe Commerce Cloud project. No integration with a third-party repository provider is setup.

What two actions would be required to ensure the developer has access? (Choose Two.)

- A. The Adobe Commerce admin user must be created and the developer's SSH public key must be added on their local system
- B. The developer's SSH public key must be added into a file named ~/.ssh/authorized_keys
- C. The developer needs to add SSH public key in the Cloud Account dashboard settings
- D. The developer's email must be added under Users in the Cloud Project Web UI

Answer: C,D

Explanation:

To ensure the developer has access to push code in an Adobe Commerce Cloud project, the developer's email must be added under Users in the Cloud Project Web UI and the developer needs to add SSH public key in the Cloud Account dashboard settings. The Cloud Project Web UI is a web interface that allows managing and configuring Adobe Commerce Cloud projects and environments. The developer's email must be added under Users to grant them access to the project and assign them a role and permissions. The Cloud Account dashboard settings is a web interface that allows managing and configuring Adobe Commerce Cloud accounts and SSH keys. The developer needs to add SSH public key in the settings to enable secure connection to the project and environments via SSH. Verified References: [Magento 2.4 DevDocs]

NEW QUESTION # 38

There is the task to create a custom product attribute that controls the display of a message below the product title on the cart page, in order to identify products that might be delivered late.

The new EAV attribute is `is_delayed` has been created as a boolean and is working correctly in the admin panel and product page.

What would be the next implementation to allow the `is_delayed` EAV attribute to be used in the `.phtml` cart page such as `$block->getProduct()->getIsDelayed()`?

A)

Create a new file `etc/catalog_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Catalog:etc/catalog_attributes.xsd">
    <group name="quote_item">
        <attribute name="is_delayed" />
    </group>
</config>
```

B)

Create a new file `etc/extension_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:framework:Api/etc/extension_attributes.xsd">
    <extension attributes for="Magento\Catalog\Api\Data\ProductRenderInterface">
        <attribute code="is_delayed" type="bool" />
    </extension_attributes>
</config>
```

C)

Create a new file `etc/eav_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Eav:etc/eav_attributes.xsd">
    <entity type="quote_item">
        <attribute code="is_delayed">
            <field code="is_visible" locked="true" />
        </attribute>
    </entity>
</config>
```

- A. Option C
- B. Option B
- C. Option A

Answer: C

Explanation:

To allow the `is_delayed` EAV attribute to be used in the `.phtml` cart page, the developer needs to create a new file called `etc/catalog_attributes.xml`. This file will contain the definition of the `is_delayed` attribute.

The following code shows how to create the `etc/catalog_attributes.xml` file:

XML

```
<?xml version="1.0"?>
<catalog_attributes>
<attribute code="is_delayed" type="int">
<label>Is Delayed</label>
<note>This attribute indicates whether the product is delayed.</note>
<sort_order>10</sort_order>
<required>>false</required>
</attribute>
</catalog_attributes>
```

Once the `etc/catalog_attributes.xml` file has been created, the `is_delayed` attribute will be available in the .phtml cart page. The attribute can be accessed using the `getIsDelayed()` method of the `Product` class.

PHP

```
$product = $block->getProduct();
```

```
$isDelayed = $product->getIsDelayed();
```

The `isDelayed` variable will contain the value of the `is_delayed` attribute. If the value of the attribute is 1, then the product is delayed. If the value of the attribute is 0, then the product is not delayed.

NEW QUESTION # 39

An Adobe Commerce developer has created a process that exports a given order to some external accounting system. Launching this process using the Magento CLI with the command `php bin/magento my_module:`

`order:process --order_id=<order_id>` is required.

Example: `php bin/magento my_module:order:process --order_id=1245.`

What is the correct way to configure the command?

- A.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addArgument('order_id', InputArgument::REQUIRED, 'Order ID');
    parent::configure();
}
```

- B.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    parent::configure();
}

protected function values()
{
    return [new InputValue('order_id', InputValue::REQUIRED, 'Order ID')];
}
```

- C.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addOption('order_id', null, InputOption::VALUE_REQUIRED, 'Order ID');
    parent::configure();
}
```

- D.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addOption('order_id', null, InputOption::VALUE_REQUIRED, 'Order ID');

    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addArgument('order_id', InputArgument::REQUIRED, 'Order ID');
    parent::configure();
}
```

Answer: A

Explanation:

To properly configure a Magento CLI command that includes a required argument, such as `--order_id`, which is mandatory for processing an order, the best approach is to use the `addArgument` method within the `configure` function. This method defines required arguments for the command, ensuring the user provides the necessary data.

Option D is correct for the following reasons:

* Using `addArgument` for Required Inputs: The `addArgument` method is used here to declare `order_id` as a required argument. This is more appropriate than `addOption` when the parameter is essential for command execution and should not be omitted. By specifying `InputArgument::REQUIRED`, the command ensures that the `order_id` must be provided by the user.

* Explanation: `addArgument` is ideal for required data that the command cannot function without, while `addOption` is typically used for optional parameters. `order_id` is essential to identify which order to process, making `addArgument` the suitable choice here.

NEW QUESTION # 40

.....

After our unrelenting efforts, AD0-E724 learning guide comes in everybody's expectation. Our professional experts not only have simplified the content and grasp the key points for our customers, but also recompiled the AD0-E724 preparation materials into simple language so that all of our customers can understand easily no matter which countries they are from. In such a way, you will get a leisure study experience as well as a doomed success on your coming AD0-E724 Exam.

Free AD0-E724 Test Questions: <https://www.prepawaytest.com/Adobe/AD0-E724-practice-exam-dumps.html>

Adobe AD0-E724 Reliable Dumps Pdf Why am I still being charging for 2 or 3 USD after my payment, In addition, our company has helped many people who participate in the Free AD0-E724 Test Questions - Commerce Developer Professional actual valid questions for the first time to obtain the Adobe Free AD0-E724 Test Questions Free AD0-E724 Test Questions - Commerce Developer Professional certificate, Besides, score comparison and improvement check is available by Free AD0-E724 Test Questions - Commerce Developer Professional test engine, that is to say, you will get score and after each test, then you can do the next study plan according to your weakness and strengths.

Customize a Gantt chart view, This application is intended as a complete AD0-E724 Valid Test Voucher learning application that uses many of the features presented in the book, Why am I still being charging for 2 or 3 USD after my payment?

Quiz Perfect AD0-E724 - Commerce Developer Professional Reliable Dumps Pdf

In addition, our company has helped many people who participate Reliable AD0-E724 Exam Answers in the Commerce Developer Professional actual valid questions for the first time to obtain the Adobe Commerce Developer Professional certificate.

Besides, score comparison and improvement check is available by Commerce Developer Professional AD0-E724 Test Engine, that is to say, you will get score and after each test, then you can do the next study plan according to your weakness and strengths.
