Adobe Commerce Developer Expert Sample Questions (Q13-Q18):

NEW QUESTION # 13

A Developer discovers that inline scripts are no longer working. This issue occurred after upgrading to the latest version of Adobe Commerce. When checking the console, the errors indicate that the scripts are not allowed to execute. The following is an example script:

```
<div id="action-div" onclick="someComponent('title')">Action</div>
```

How should the Developer adapt the script to run properly according to security practices?

- A. `<?php echo $block->renderAllowedElement('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`
- B. `<?php echo $escaper->renderSecureTag('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`
- C. `<?php echo $secureRenderer->renderEventListenerAsTag('onclick', 'someComponent(\'title\')', '#action- div'); ?>`

Answer: C

NEW QUESTION # 14

A Developer is working on a new controller in admin panel. Per requirements, it must be accessible only for specific admin users. According to best practices, how should the Developer secure access to the new controller?

- A. Override `ADMIN_RESOURCE` constant with a value for a custom access control list (ACL) resource.
- B. Implement `isAllowed` method from `AuthorizationInterface` and check the result for a custom access control list (ACL) resource.
- C. Override `_isAllowed` method and check the authorization result for a custom access control list (ACL) resource.

Answer: A

NEW QUESTION # 15

A Developer is integrating a custom third-party gift card system into the Adobe Commerce checkout. During the checkout process, a customer enters a store-bought gift card for payment, and depending on external API checks, the gift card is verified and allowed to be used on the order.

Which approach should be used for the internal processing of such functionality?

- A. Directly subtract the gift card amount from the order, keeping no history of the discount transaction.
- B. Create a unique voucher code for each gift card usage request which grants a discount on the order's total.
- C. Create an Adobe Commerce gift card account and manage the account using the gift card repositories.

Answer: B

NEW QUESTION # 16

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

- A. Install the `cweagans/composer-patches` module and edit the `composer.json` file to apply the custom patch.
- B. Update the `quality-patches` module and list the required patch in the `magento-ce-patch.yaml` file.
- C. Install only official patches supplied by them to maintain upgradability.

Answer: A

NEW QUESTION # 17

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Prevent users from accessing certain areas of the website based on their IP address.
- B. Restrict which resources (scripts, styles, images) are allowed to load on the website.
- C. Ensure that all user input is sanitized before being processed by the application.

Answer: B

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

- * Which scripts can be executed (script-src).
- * Which stylesheets can be applied (style-src).
- * Which images and media can be loaded (img-src, media-src).
- * Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded."- Adobe Commerce DevDocs: Content Security Policy

* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts."- Adobe Commerce Security Guide
