

AD0-E902 actual exam torrent & AD0-E902 practice materials & AD0-E902 valid practice material

BONUS!!! Download part of VerifiedDumps AD0-E902 dumps for free: <https://drive.google.com/open?id=1KRvLQM6dz5j9gt679VrBAaXWdVdrQfv1>

You can get three different versions for AD0-E902 exam dumps. The AD0-E902 pdf file is the common version which many candidates want to choose. The AD0-E902 pdf dumps can be printed into papers, which is convenient to reviewing and remember. The AD0-E902 PC test engine is suitable for any windows system, which can simulate the actual test. While the AD0-E902 Online Test engine can be installed on any electronic device, supporting off-line study. You can choose the proper version as your needs for AD0-E902 test preparation.

Adobe AD0-E902 Exam Syllabus Topics:

Topic	Details
Topic 1	• Testing and Error Handling: This section of the exam measures the skills of Quality Assurance Engineers and evaluates the principles of testing and error handling in Fusion. Candidates must define test plans and test cases, identify directives for handling unreliable services, and configure custom error handling mechanisms. One specific skill tested is applying the correct error-handling directive to manage service disruptions.
Topic 2	• Foundational Technical Concepts: This section of the exam measures the skills of Fusion Developers and covers core technical concepts related to data transformation, function nesting, and expression formation in Fusion. Candidates must understand how to modify field formats, use appropriate functions, and work with data manipulation techniques. One key skill evaluated is selecting the correct function to transform data between different formats.

Topic 3	Scenario Design and Architecture: This section of the exam measures the skills of Solution Architects and focuses on designing and structuring Fusion scenarios efficiently. Candidates must determine the correct steps to parse JSON, perform data lookups, and distinguish between different triggers. Understanding system limitations, module selection, and timezone handling is also essential. One key skill assessed is identifying the appropriate method for uploading documents while managing access controls.
Topic 4	Working with APIs: This section of the exam measures the skills of Integration Specialists and assesses knowledge of API interactions within Fusion. Candidates must handle rate-limiting errors, identify ways to integrate third-party APIs and determine the correct module types when built-in functionalities are unavailable. One critical skill evaluated is implementing a solution for API rate limits to ensure seamless integration.

Quiz AD0-E902 - Fantastic New Adobe Workfront Fusion Professional Exam Cram

Our AD0-E902 exam simulation is accumulation of knowledge about the exam strictly based on the syllabus of the exam. They give users access to information and exam, offering simulative testing environment when you participate it like in the classroom. Besides, contents of AD0-E902 study guide are selected by experts which are appropriate for your practice in day-to-day life. It is especially advantageous for busy workers who lack of sufficient time to use for passing the AD0-E902 Preparation materials. And as the high pass rate of more than 98%, you will pass for sure with it.

Adobe Workfront Fusion Professional Sample Questions (Q51-Q56):

NEW QUESTION # 51

A CSV export from another system provides columns of information about Purchase Orders. The graphic below includes information from each column and an example of data from one row:

The customer wants this information in the title of their Workfront projects in the following order:

1. PO#
2. Name
3. PO Fulfillment Date
4. If a discount was given, include the Discount% and the Approver's Last Name.

Ex. 2837 - Compendium-Premium Running Shoes - 21 /02/16 -15% Discount - UserLast Which expression below represents the project name that the customer wants?

- A.

- B.
- C.

- D.

Answer: C

Explanation:

- * Understanding the Requirement:
- * The project name in Workfront must include:
- * Purchase Order Number (PO#).
- * Name of the product.
- * PO Fulfillment Date (formatted as YY/MM/DD).
- * If a discount is provided, append the discount percentage and the approver's last name in the format: 15% Discount - UserLast.
- * Example Output:

sql

Copy

2837 - Compendium-Premium Running Shoes - 21/02/16 - 15% Discount - UserLast

- * Why Option A is Correct:
 - * The expression in Option A achieves the desired result step-by-step:
 - * 3.PO#: Includes the PO number.
 - * 3.Name: Appends the name of the product.
 - * formatDate(3.PO Fulfillment Date, YY/MM/DD): Formats the PO Fulfillment Date in the desired YY/MM/DD format.
 - * if(3.Discount Provided? = "Yes", "- " + 3.Discount % + " Discount - " + 3.Approver Last Name):
 - * Uses the if function to check if a discount was provided.
 - * If "Yes," it appends the discount percentage (3.Discount %) and approver's last name (3.Approver Last Name) with the required format.
 - * Why the Other Options are Incorrect:
 - * Option B:
 - * The expression is incorrect because it places if(3.Discount Provided?...) directly after PO Fulfillment Date without using formatDate for date formatting. This results in an unformatted date.
 - * Option C:
 - * Uses parseDate instead of formatDate, which is incorrect in this context. parseDate is used to interpret strings as dates, not to format dates for output.
 - * Option D:
 - * The expression does not include any conditional logic for checking if a discount is provided. It simply appends Discount - Approver Last Name regardless of whether a discount was given.
 - * Steps to Use the Expression in Workfront Fusion:
 - * Place the expression in the module that defines the project title in Workfront.
 - * Map the fields (PO#, Name, PO Fulfillment Date, etc.) to the respective columns from the CSV data.
 - * Test the scenario to ensure the output matches the desired format.
 - * Final Expression (Option A):
3.PO# + "- " + 3.Name + "- " + formatDate(3.PO Fulfillment Date; YY/MM/DD) + if(3.Discount Provided? = "Yes", "- " + 3.Discount % + " Discount - " + 3.Approver Last Name)

NEW QUESTION # 52

A Fusion scenario uses an HTTP module to create a new record.
Which response code indicates that the connection was successful?

- A. 0
- B. GREEN
- C. 1
- **D. 2**

Answer: D

Explanation:

- * Understanding HTTP Response Codes: HTTP response codes are standardized codes that indicate the result of a request made to a server:
- * 2xx (Success): Indicates that the request was successfully received, understood, and processed by the server.
- * 200 OK: Specifically means that the request was successful, and the response contains the requested data or confirms the operation's success.

* Response Code for Creating a Record:

* When using an HTTP module in Fusion to create a new record, a response code of 200 confirms that the request to the server was successfully processed and the record creation was successful.

* Why Not Other Options?

* A. GREEN: This is not a valid HTTP response code. It might represent a status in some systems but is unrelated to HTTP standards.

* C. 402: This code indicates a payment required error, meaning the request cannot be fulfilled until payment is made.

* D. 500: This is a server-side error, indicating that something went wrong on the server during processing.

NEW QUESTION # 53

A Fusion scenario is triggered by a project status update. The scenario then updates the status, causing repeated execution of the scenario.

Which action should a user take to keep this from happening?

- **A. Create a filter after the instant trigger that only passes records that have not been updated by Fusion**
- B. Schedule the instant trigger to only run at intervals to prevent Fusion from thinking the record has been updated after each run
- C. When using instant triggers, finish the scenario with the Break directive to prevent the record from being updated again

Answer: A

NEW QUESTION # 54

A Fusion user notices that a third-party web service is sometimes returning a connection error - "

"service is not reachable". However, the module executes successfully a few minutes later in a new execution.

Which action increases the success rate of the executions?

- A. Adding an error handler that will notify the system owner
- B. Adding a Break directive to the module
- **C. Making use of the default error handling**

Answer: C

Explanation:

When dealing with intermittent errors, such as "service is not reachable," the default error handling in Adobe Workfront Fusion is often sufficient to improve execution success rates.

* Default Error Handling:

* Fusion automatically retries operations when transient errors, such as network or connection issues, occur.

* By leveraging this built-in functionality, the system will attempt to re-execute the failing module after a brief delay, which is often enough for the external service to become reachable again.

* Why Not Other Options?

* A. Adding an error handler that will notify the system owner: While notifying the owner can be useful for monitoring purposes, it does not directly address improving the success rate of executions.

* C. Adding a Break directive to the module: Adding a Break directive will stop the execution entirely, which is counterproductive in this case, as the service typically becomes reachable again after a short time.

NEW QUESTION # 55

A custom API call to a web service is used inside of a high volume iteration. The module that calls the web service sometimes returns an error - 429: Too many requests.

Which two actions may be used to address this error? (Choose two.)

- **A. Add a sleep module just prior to the module generating the error**

- B. Add a module to test the service for errors
- C. Use a break directive on the module generating the error
- D. Use an ignore directive on the module generating the error

Answer: A,B

Explanation:

When encountering the error 429: Too many requests, which indicates the web service is being overwhelmed by requests, the following actions can help:

* A. Add a Sleep Module:

* Adding a sleep module introduces a delay between iterations, reducing the frequency of API calls.

* By slowing down the rate of requests, you avoid hitting the rate limits of the web service, thus reducing the chances of receiving a 429 error.

* This approach is useful for managing high-volume iterations without overloading the external service.

* C. Add a Module to Test the Service for Errors:

* Adding a module to test the service's response before making a call can help prevent the 429 error by checking if the service is ready to handle requests.

* This preemptive check allows the scenario to conditionally execute, ensuring that it doesn't overwhelm the service and respects the API rate limits.

* Why Not Other Options?

* B. Use an Ignore Directive: Ignoring errors can be risky because it would cause the scenario to ignore 429 errors, possibly leading to failed API calls that are not addressed. Ignoring an error doesn't solve the issue of too many requests being sent to the service.

* D. Use a Break Directive: The break directive would stop the execution, which is counterproductive when trying to resolve the issue by reducing the rate of requests. It would not address the root cause of too many requests.

NEW QUESTION # 56

.....

The whole payment process on our AD0-E902 exam braindumps only lasts a few seconds as long as there has money in your credit card. Then our system will soon deal with your orders according to the sequence of payment. Usually, you will receive the AD0-E902 Study Materials no more than five minutes. Then you can begin your new learning journey of our AD0-E902 preparation questions. All in all, our payment system and delivery system are highly efficient.
