

# AD0-E902: Adobe Workfront Fusion Professional PDF - Testinsides AD0-E902 actual - AD0-E902 test dumps

**AD0-E902 Adobe Workfront**  
**Fusion Professional Exam**  
**5 Free Questions with Explanations**

2025 Latest Easy4Engine AD0-E902 PDF Dumps and AD0-E902 Exam Engine Free Share: [https://drive.google.com/open?id=1HUpD\\_IqdTm5BwVLzAg7H0vVLy7iPRLOE](https://drive.google.com/open?id=1HUpD_IqdTm5BwVLzAg7H0vVLy7iPRLOE)

If you are determined to get the certification, our AD0-E902 question torrent is willing to give you a hand; because the study materials from our company will be the best study tool for you to get the certification. Now I am going to introduce our AD0-E902 Exam Question to you in detail, please read our introduction carefully, we can make sure that you will benefit a lot from it. If you are interest in it, you can buy it right now.

You may doubt about such an amazing data, which is unimaginable in this industry. But our AD0-E902 exam questions have made it. You can imagine how much efforts we put into and how much we attach importance to the performance of our AD0-E902 study materials. We use the 99% pass rate to prove that our AD0-E902 practice materials have the power to help you go through the exam and achieve your dream. Most candidates show their passion on our AD0-E902 guide materials, because we guarantee all of the customers that you will pass for sure with our AD0-E902 exam questions.

## Adobe AD0-E902 Exam Engine, AD0-E902 Real Exam Answers

AD0-E902 study material is suitable for all people. Whether you are a student or an office worker, whether you are a veteran or a rookie who has just entered the industry, AD0-E902 test answers will be your best choice. For office workers, AD0-E902 test dumps provide you with more flexible study time. You can download learning materials to your mobile phone and study at anytime, anywhere. And as an industry rookie, those unreadable words and expressions in professional books often make you feel mad, but AD0-E902 Study Materials will help you to solve this problem perfectly.

## Adobe AD0-E902 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Testing and Error Handling: This section of the exam measures the skills of Quality Assurance Engineers and evaluates the principles of testing and error handling in Fusion. Candidates must define test plans and test cases, identify directives for handling unreliable services, and configure custom error handling mechanisms. One specific skill tested is applying the correct error-handling directive to manage service disruptions.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Foundational Technical Concepts: This section of the exam measures the skills of Fusion Developers and covers core technical concepts related to data transformation, function nesting, and expression formation in Fusion. Candidates must understand how to modify field formats, use appropriate functions, and work with data manipulation techniques. One key skill evaluated is selecting the correct function to transform data between different formats.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Working with APIs: This section of the exam measures the skills of Integration Specialists and assesses knowledge of API interactions within Fusion. Candidates must handle rate-limiting errors, identify ways to integrate third-party APIs and determine the correct module types when built-in functionalities are unavailable. One critical skill evaluated is implementing a solution for API rate limits to ensure seamless integration.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Scenario Design and Architecture: This section of the exam measures the skills of Solution Architects and focuses on designing and structuring Fusion scenarios efficiently. Candidates must determine the correct steps to parse JSON, perform data lookups, and distinguish between different triggers. Understanding system limitations, module selection, and timezone handling is also essential. One key skill assessed is identifying the appropriate method for uploading documents while managing access controls.</li> </ul>

## Adobe Workfront Fusion Professional Sample Questions (Q32-Q37):

### NEW QUESTION # 32

A user queried Salesforce for user information, and it returned a name, email address, and user ID. The user would like to assign a task in Workfront.

Which steps are required to assign the task?

- A. Query Workfront for user based on email address > assign task using returned ID**
- B. Assign the task using the provided user ID > add the user ID to the assignment field
- C. Query Workfront based on the user's name > assign task using returned email address

**Answer: A**

Explanation:

- \* Step 1: Query Workfront for User Based on Email Address
- \* Salesforce provides the email address of the user. Since Workfront uses user IDs for task assignments, the email address can be used as a unique identifier to query Workfront's database.
- \* A query module in Workfront Fusion retrieves the corresponding Workfront user ID using the provided email address.
- \* Step 2: Assign Task Using Returned ID
- \* After retrieving the Workfront user ID, use it in the assignment field of the task module in Fusion.
- \* The task assignment process requires a valid user ID, ensuring proper linkage and assignment within Workfront.
- \* Why Not Other Options?
- \* A. Assign the task using the provided user ID > add the user ID to the assignment field: The Salesforce user ID is not recognized by Workfront. It is necessary to query Workfront to convert the email into a Workfront-compatible user ID.
- \* C. Query Workfront based on the user's name > assign task using returned email address:

Workfront uses user IDs, not email addresses, for task assignments. Names are also not unique and could cause assignment errors.

References:

- \* Adobe Workfront Fusion Documentation: Task Assignments Using User IDs
- \* Experience League Community: Mapping Salesforce Data to Workfront Tasks

### NEW QUESTION # 33

A Fusion user must archive the last five versions of a scenario for one year.

What should the user do?

- A. Find previous versions using the History tab
- B. Save the scenario frequently
- C. Download the scenario blueprints**
- D. Clone the scenario anytime the design changes

**Answer: C**

Explanation:

Step by Step Comprehensive Detailed Explanation:

\* Understanding the Requirement:

- \* The user needs to archive the last five versions of a scenario for one year.
- \* Archiving ensures there is a record of previous versions in case rollback or review is needed.

- \* Option Analysis:
  - \* A. Save the scenario frequently:
    - \* Incorrect. While frequent saving ensures changes are not lost, it does not provide an archival mechanism for version history.
  - \* B. Download the scenario blueprints:
    - \* Correct. Downloading blueprints of the scenario allows the user to store version snapshots externally. Blueprints include the complete design and settings of the scenario, making them ideal for archival purposes.
  - \* C. Clone the scenario anytime the design changes:
    - \* Incorrect. Cloning creates duplicates of the scenario but does not inherently manage or track version history for archival purposes.
  - \* D. Find previous versions using the History tab:
    - \* Incorrect. The History tab only shows recent edits and logs but does not provide a long-term archiving solution.
- \* Why Downloading Blueprints is Best:
  - \* External Storage: Blueprints can be downloaded and stored securely for long-term use.
  - \* Restoration: A saved blueprint can be re-imported into Fusion to restore a scenario exactly as it was.
  - \* Version Control: Allows the user to manually manage and organize multiple scenario versions over time.
- \* Implementation Steps:
  - \* Go to the scenario in Workfront Fusion.
  - \* Use the Download Blueprint option to save a copy of the scenario.
  - \* Label and organize the blueprints by version and date for easy retrieval later.

#### NEW QUESTION # 34

Which module must a user select to upload a document into Workfront and attach it to a task?

- A. Create Record of Document type while setting the related record
- B. Miscellaneous Action to attach document to a task
- **C. Upload Document while setting the related record**
- D. Create Record for Document Version after Create Record for the document on the task

#### Answer: C

Explanation:

\* Understanding the Requirement:

- \* The user wants to upload a document into Workfront and attach it to a specific task.
- \* This action involves creating a document in Workfront and associating it with a task as a related record.

\* Why Option B is Correct:

- \* The Upload Document module is specifically designed for uploading files into Workfront.
- \* It includes the ability to set a related record (e.g., a task, project, or issue) to which the document will be attached.
- \* This ensures the document is uploaded and correctly linked to the task in a single operation.

\* Why the Other Options are Incorrect:

\* Option A ("Create Record for Document Version after Create Record for the document on the task"):

- \* This involves multiple steps, which are unnecessary. The Upload Document module already handles both the upload and the attachment in one action.

\* Option C ("Create Record of Document type while setting the related record"):

- \* The Create Record module is not designed for file uploads. It only creates metadata records, not the actual document.

\* Option D ("Miscellaneous Action to attach document to a task"):

- \* There is no Miscellaneous Action specifically for attaching a document to a task. The Upload Document module is the appropriate choice.

\* Steps to Upload a Document in Workfront Fusion:

- \* Add the Upload Document module to the scenario.
- \* Specify the file to upload (e.g., from a previous module like Google Drive or an HTTP request).
- \* Set the related record to the target task by providing its ID.
- \* Run the scenario to upload and attach the document to the task.

References and Supporting Documentation:

\* Adobe Workfront Fusion: Upload Document Module

- \* Workfront Community: Best Practices for Document Management in Fusion The Upload Document module is the most efficient and accurate method for uploading and attaching a document to a task in Workfront.

#### NEW QUESTION # 35

Which two statements about working with incomplete executions are true? (Choose two.)

- A. Incomplete executions are not stored by default. This option must be enabled in the scenario settings in each scenario
- B. When incomplete executions are toggled, a user must review the History tab to understand the error and then manually run the entire scenario to resolve
- C. Incomplete executions should be avoided because they only give visibility into better scenario design
- D. When resolving an incomplete execution, the scenario will process the bundle of data through the remainder of the scenario not yet executed

**Answer: A,D**

Explanation:

- \* B. Incomplete Executions Are Not Stored by Default:  
By default, Workfront Fusion does not store incomplete executions unless this setting is explicitly enabled in the scenario's settings.
- \* This feature needs to be activated for troubleshooting and manually resolving incomplete executions later.
- \* D. Resolving Incomplete Executions:  
When an incomplete execution is resumed, the scenario picks up from the point of failure and processes the remaining steps with the data bundle that caused the error.  
This ensures that the scenario completes its intended process without restarting entirely.
- \* Why Not Other Options?  
A. When incomplete executions are toggled, a user must review the History tab to understand the error and then manually run the entire scenario to resolve: This is incorrect because incomplete executions do not require restarting the entire scenario; they continue from the point of failure.  
C. Incomplete executions should be avoided because they only give visibility into better scenario design: This statement is misleading. Incomplete executions are often inevitable and provide critical insights into handling errors and improving scenarios.

- \* Adobe Workfront Fusion Documentation: Working with Incomplete Executions
- \* Experience League Community: How to Enable and Manage Incomplete Executions in Fusion

## NEW QUESTION # 36

A Fusion scenario is making too many requests to a third-party API, which returns a 429 "Too Many Requests" error. Which technique reduces the number of API requests?

- A. Using a Search module to get record IDs and then read those IDs with a Read Record module to pull other data
- B. Adding a Retry error handling directive to the Fusion scenario
- C. Moving Search and GET modules earlier in the scenario instead of pulling more data about the same record multiple times

**Answer: C**

Explanation:

- \* Understanding the Issue:  
The scenario is making too many API requests, causing the third-party API to return a 429 "Too Many Requests" error, which indicates that the rate limit has been exceeded.
- \* The solution needs to reduce unnecessary or redundant API requests to prevent hitting the API limits.
- \* Why Option B is Correct:  
\* Avoid Redundant Requests:  
Placing Search and GET modules earlier in the scenario ensures that all required data is retrieved in one batch or in fewer requests, rather than repeatedly querying the same record later in the scenario.  
This technique reduces the overall number of API requests sent to the third-party system.
- \* Efficient Data Flow:  
By structuring the scenario to retrieve all necessary data at the beginning, subsequent modules can reuse the retrieved data instead of making additional API calls.
- \* Why the Other Options are Incorrect:  
\* Option A ("Using a Search module and then a Read Record module"):  
This approach can increase API requests, as the Search module retrieves record IDs, and the Read Record module makes separate API requests for each record. This often results in more requests than necessary.  
\* Option C ("Adding a Retry error handling directive"):  
Adding a Retry directive does not reduce the number of requests. Instead, it retries failed requests, which could worsen the problem by increasing API traffic.
- \* Best Practices to Reduce API Requests:  
\* Consolidate data retrieval into a single module or a smaller number of requests.  
\* Use caching or intermediate storage (like Fusion Data Stores) to avoid re-fetching the same data.

\* Limit the scope of Search modules by using filters or pagination to process smaller, relevant data sets.

## NEW QUESTION # 37

.....

Our AD0-E902 prepare questions are suitable for people of any culture level, whether you are the most basic position, or candidates who have taken many exams, is a great opportunity for everyone to fight back. According to different audience groups, our products for the examination of the teaching content of a careful division, so that every user can find a suitable degree of learning materials. More and more candidates choose our AD0-E902 Quiz guide, they are constantly improving, so what are you hesitating about? As long as users buy our products online, our Adobe Workfront Fusion Professional practice materials will be shared in five minutes, so hold now, but review it! This may be the best chance to climb the top of your life.
