

# AD0-E902 Reliable Exam Materials - AD0-E902 Exam Cram Review

2025 Latest Valid VCE AD0-E902 PDF Dumps and AD0-E902 Exam Engine Free Share: <https://drive.google.com/open?id=1Rqje5g3MUGRBo-jISIM6fTgtXjhuMC1>

Through years of efforts and constant improvement, our AD0-E902 study materials stand out from numerous study materials and become the top brand in the domestic and international market. Our company controls all the links of AD0-E902 study materials which include the research, innovation, survey, production, sales and after-sale service strictly and strives to make every link reach the acme of perfection. Our company pays close attentions to the latest tendency among the industry and the clients' feedback about our AD0-E902 Study Materials.

The Adobe AD0-E902 practice tests have customizable time and AD0-E902 exam questions feature so that the students can set the time and AD0-E902 exam questions according to their needs. The Adobe AD0-E902 practice test questions are getting updated on the daily basis and there are also up to 1 year of free updates. Earning the Adobe AD0-E902 Certification Exam is the way to grow in the modern era with high-paying jobs. The 24/7 support system is available for the customers so that they can get the solution to every problem they face and pass Adobe Workfront Fusion Professional (AD0-E902) exam. You can also evaluate the AD0-E902 prep material with a free demo.

## 2025 Accurate AD0-E902: Adobe Workfront Fusion Professional Reliable Exam Materials

These Adobe AD0-E902 dumps are real, updated, and error-free. It provides you with the essential Adobe AD0-E902 exam knowledge that you need to prepare and pass the Adobe AD0-E902 certification test with high scores. You can easily use all these three Adobe AD0-E902 Exam Questions format. These formats are compatible with all devices, operating systems, and the latest browsers.

### Adobe AD0-E902 Exam Syllabus Topics:

--

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Scenario Design and Architecture: This section of the exam measures the skills of Solution Architects and focuses on designing and structuring Fusion scenarios efficiently. Candidates must determine the correct steps to parse JSON, perform data lookups, and distinguish between different triggers. Understanding system limitations, module selection, and timezone handling is also essential. One key skill assessed is identifying the appropriate method for uploading documents while managing access controls.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Foundational Technical Concepts: This section of the exam measures the skills of Fusion Developers and covers core technical concepts related to data transformation, function nesting, and expression formation in Fusion. Candidates must understand how to modify field formats, use appropriate functions, and work with data manipulation techniques. One key skill evaluated is selecting the correct function to transform data between different formats.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Testing and Error Handling: This section of the exam measures the skills of Quality Assurance Engineers and evaluates the principles of testing and error handling in Fusion. Candidates must define test plans and test cases, identify directives for handling unreliable services, and configure custom error handling mechanisms. One specific skill tested is applying the correct error-handling directive to manage service disruptions.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Working with APIs: This section of the exam measures the skills of Integration Specialists and assesses knowledge of API interactions within Fusion. Candidates must handle rate-limiting errors, identify ways to integrate third-party APIs and determine the correct module types when built-in functionalities are unavailable. One critical skill evaluated is implementing a solution for API rate limits to ensure seamless integration.</li> </ul>

## Adobe Workfront Fusion Professional Sample Questions (Q13-Q18):

### NEW QUESTION # 13

What are two required elements of a test case? (Choose two.)

- A. Source code being tested
- **B. Clear procedure for completing the test**
- C. Name of test owner
- **D. Expected outcome of test**

**Answer: B,D**

Explanation:

- \* A. Expected Outcome of Test
- \* A test case must clearly state what the expected outcome is, providing a standard against which the results can be measured.
- \* This ensures testers can validate whether the scenario behaves as intended.
- \* C. Clear Procedure for Completing the Test
- \* A well-defined procedure outlines the exact steps required to execute the test, ensuring consistent and repeatable testing.
- \* This reduces ambiguity and helps identify whether errors are due to the scenario configuration or improper test execution.
- \* Why Not Other Options?
- \* B. Name of Test Owner: While helpful for accountability, the name of the test owner is not a required component of the test case itself.
- \* D. Source Code Being Tested: Fusion scenarios do not typically involve source code. Instead, the focus is on workflow execution and configuration, making this element irrelevant.

References:

- \* Workfront Training Materials: Test Case Design Best Practices
- \* Adobe Workfront Fusion Documentation: Testing and Debugging Scenarios

### NEW QUESTION # 14

Which module must a user select to upload a document into Workfront and attach it to a task?

- A. Miscellaneous Action to attach document to a task
- B. Create Record for Document Version after Create Record for the document on the task
- **C. Upload Document while setting the related record**
- D. Create Record of Document type while setting the related record

**Answer: C**

Explanation:

- \* Understanding the Requirement:
- \* The user wants to upload a document into Workfront and attach it to a specific task.
- \* This action involves creating a document in Workfront and associating it with a task as a related record.
- \* Why Option B is Correct:
- \* The Upload Document module is specifically designed for uploading files into Workfront.
- \* It includes the ability to set a related record (e.g., a task, project, or issue) to which the document will be attached.
- \* This ensures the document is uploaded and correctly linked to the task in a single operation.
- \* Why the Other Options are Incorrect:
- \* Option A ("Create Record for Document Version after Create Record for the document on the task"):
  - \* This involves multiple steps, which are unnecessary. The Upload Document module already handles both the upload and the attachment in one action.
- \* Option C ("Create Record of Document type while setting the related record"):
  - \* The Create Record module is not designed for file uploads. It only creates metadata records, not the actual document.
- \* Option D ("Miscellaneous Action to attach document to a task"):
  - \* There is no Miscellaneous Actions specifically for attaching a document to a task. The Upload Document module is the appropriate choice.
- \* Steps to Upload a Document in Workfront Fusion:
- \* Add the Upload Document module to the scenario.
- \* Specify the file to upload (e.g., from a previous module like Google Drive or an HTTP request).
- \* Set the related record to the target task by providing its ID.
- \* Run the scenario to upload and attach the document to the task.

References and Supporting Documentation:

- \* Adobe Workfront Fusion: Upload Document Module
- \* Workfront Community: Best Practices for Document Management in Fusion The Upload Document module is the most efficient and accurate method for uploading and attaching a document to a task in Workfront.

## NEW QUESTION # 15

A user notices that all task due dates for an organization are in the wrong time zone.

What is the simplest way to change the time zone so that it applies to all dates used in the organization's scenarios?

- A. Set a variable for every date in the scenario that formats the date to the desired time zone by using the formatDate function
- B. Change the scenario's time zone default
- **C. Change the Fusion organization's time zone**
- D. Change the time zone in the computer's localization settings

**Answer: C**

Explanation:

- \* Understanding the Issue:
- \* The user observes that all task due dates are incorrect due to a mismatch in the time zone.
- \* The solution must ensure that the correct time zone is applied universally across all scenarios and dates within the organization's Fusion instance.
- \* Why Option B is Correct:
- \* Fusion Organization's Time Zone Setting:
- \* Changing the time zone at the organization level ensures that all scenarios within the organization adopt the updated time zone setting.
- \* This change applies globally, making it the simplest and most efficient method to ensure consistency across all dates and scenarios.
- \* This adjustment prevents the need for scenario-specific or localized changes, saving time and reducing errors.
- \* Why the Other Options are Incorrect:
- \* Option A ("Set a variable for every date using formatDate"):
  - \* While the formatDate function can adjust time zones for individual dates, applying this approach to every date in every scenario is highly inefficient and error-prone. It does not offer a global solution.

- \* Option C ("Change the scenario's time zone default"):
- \* Scenarios in Fusion do not have a specific "time zone default" setting. The organization's time zone setting is the controlling factor.
- \* Option D ("Change the time zone in the computer's localization settings"):
- \* Fusion scenarios run on cloud servers, not the user's local machine. Changing the computer's time zone would have no effect on the scenarios' behavior.
- \* Steps to Change the Organization's Time Zone:
- \* Log in to Adobe Workfront Fusion.
- \* Navigate to the Organization Settings:
- \* Go to the Admin Panel or the organization settings section.
- \* Locate the Time Zone setting.
- \* Select the desired time zone from the dropdown list.
- \* Save the changes.
- \* All scenarios will now adopt the updated time zone setting.
- \* How This Solves the Problem:
- \* Changing the organization's time zone applies a consistent time zone across all dates used in scenarios. This ensures accuracy without requiring individual scenario adjustments or manual interventions.
- References and Supporting Documentation:
- \* Adobe Workfront Fusion Official Documentation: Organization Settings
- \* Workfront Community: Best Practices for Time Zone Configuration

### NEW QUESTION # 16

A user needs to find a fields options within a custom form field. The details for the request are shown in the image below:

Which option is applicable for the URL text box?

- A. A screenshot of a computer Description automatically generated

- B. A screenshot of a web page Description automatically generated

URL

PARAM/search

Using

Method

GET

map: ☐

- C. A screenshot of a web browser Description automatically generated

URL

`https://wfdomain.workfront.com/attask/api/v12.0/PARAM/search`

Using

Method

GET

map: ☐

**Answer: C**

Explanation:

Step-by-Step Explanation

\* Purpose of the Query:

\* The task is to retrieve field options from a custom form field. This operation involves fetching data, not creating or modifying it, which requires a GET method.

\* Correct API Structure:

\* The URL must follow Workfront's API structure:

ruby

Copy

`https://{your-workfront-domain}/attask/api/{version}/{endpoint}`

\* Option B follows this standard structure, where:

\* `wfdomain.workfront.com` is the placeholder for the Workfront instance.

\* `/attask/api/v12.0` specifies the API version.

\* `/PARAM/search` is the endpoint to search for parameters or fields.

\* Why Not Other Options?

\* A: The use of POST is incorrect because it is meant for creating or updating resources, not retrieving data. Additionally, the URL structure is incorrect and includes unnecessary query strings (username, password) not relevant for this operation.

\* C: While the method GET is correct, the URL (PARAM/search) is incomplete and lacks the required Workfront API structure, making it invalid.

### NEW QUESTION # 17

REST APIs commonly implement CRUD operations, including Create, Read, Update, and Delete.

Which two actions is an object ID generally required to be provided as an input? Choose two.

- A. Respond
- B. Update
- C. Delete
- D. Create

**Answer: B,C**

Explanation:

\* Object ID in CRUD Operations: REST APIs commonly use CRUD operations to interact with resources. The Object ID serves as a unique identifier for the resource and is generally required for the following actions:

\* A. Update:

\* To update a specific resource, the API must know which resource to modify. The Object ID is used to identify the exact resource that should be updated.

\* Example: A PUT or PATCH request typically requires the Object ID in the URL or body of the request.

\* URL Example:

PUT /tasks/{id}

\* B. Delete:

\* Similarly, when deleting a specific resource, the Object ID is needed to ensure the correct resource is removed.

\* Example: A DELETE request requires the Object ID in the URL to target the specific resource.

\* URL Example:

DELETE /tasks/{id}

\* Why Not Other Options?

\* C. Respond: This is not a standard CRUD operation in REST APIs and does not involve an Object ID.

\* D. Create: The Create operation (typically POST) does not require an Object ID because the resource does not yet exist.

Instead, the API usually generates the Object ID after creation.
