

AD0-E902 Ressourcen Prüfung - AD0-E902 Prüfungsguide & AD0-E902 Beste Fragen

2025 Die neuesten Pass4Test AD0-E902 PDF-Versionen Prüfungsfragen und AD0-E902 Fragen und Antworten sind kostenlos verfügbar: https://drive.google.com/open?id=1vTuEqU1FdLhsaHv2DYk87-8z2upo6_5Y

Es ist uns allen klar, dass das Hauptproblem in der IT-Branche ein Mangel an Qualität und Funktionalität ist. Pass4Test stellt Ihnen alle notwendigen Schulungsunterlagen zur Adobe AD0-E902 Prüfung zur Verfügung. Ähnlich wie die reale Zertifizierungsprüfung verhelfen die Multiple-Choice-Fragen Ihnen zum Bestehen der Prüfung. Die Adobe AD0-E902 Prüfung Schulungsunterlagen von Pass4Test sind überprüfte Prüfungsmaterialien. Alle diesen Fragen und Antworten zeigen unsere praktische Erfahrungen und Spezialisierung.

Adobe AD0-E902 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Scenario Design and Architecture: This section of the exam measures the skills of Solution Architects and focuses on designing and structuring Fusion scenarios efficiently. Candidates must determine the correct steps to parse JSON, perform data lookups, and distinguish between different triggers. Understanding system limitations, module selection, and timezone handling is also essential. One key skill assessed is identifying the appropriate method for uploading documents while managing access controls.
Thema 2	Working with APIs: This section of the exam measures the skills of Integration Specialists and assesses knowledge of API interactions within Fusion. Candidates must handle rate-limiting errors, identify ways to integrate third-party APIs and determine the correct module types when built-in functionalities are unavailable. One critical skill evaluated is implementing a solution for API rate limits to ensure seamless integration.
Thema 3	Testing and Error Handling: This section of the exam measures the skills of Quality Assurance Engineers and evaluates the principles of testing and error handling in Fusion. Candidates must define test plans and test cases, identify directives for handling unreliable services, and configure custom error handling mechanisms. One specific skill tested is applying the correct error-handling directive to manage service disruptions.
Thema 4	Foundational Technical Concepts: This section of the exam measures the skills of Fusion Developers and covers core technical concepts related to data transformation, function nesting, and expression formation in Fusion. Candidates must understand how to modify field formats, use appropriate functions, and work with data manipulation techniques. One key skill evaluated is selecting the correct function to transform data between different formats.

Echte und neueste AD0-E902 Fragen und Antworten der Adobe AD0-E902 Zertifizierungsprüfung

Die Adobe AD0-E902 Zertifizierungsprüfungen werden normalerweise von den IT-Spezialisten gemäß ihren Berufserfahrungen bearbeitet. So ist es auch bei Pass4Test. Die IT-Experten bieten Ihnen Adobe AD0-E902 Prüfungsfragen und Antworten (Adobe Workfront Fusion Professional), mit deren Hilfe Sie die Prüfung erfolgreich bestehen können. Die Genauigkeit von unseren Prüfungsfragen und Antworten beträgt 100%. Mit Pass4Test Produkten können Sie ganz leicht die Adobe AD0-E902 Zertifikate bekommen, was Ihnen eine große Beförderung in der IT-Branche ist.

Adobe Workfront Fusion Professional AD0-E902 Prüfungsfragen mit Lösungen (Q11-Q16):

11. Frage

A scenario is too large, with too many modules. Which technique can reduce the number of modules?

- A. Nesting multiple mapping panel functions instead of setting and resetting variables when transforming data in more than one way
- B. Setting the scenario to Auto Commit in scenario settings
- C. Using a Compose a string module to combine variables and module output. Then use the Text Parser to parse the data and assign to variables

Antwort: A

Begründung:

Step by Step Comprehensive Detailed Explanation:

* Problem Summary:

* The scenario has become too large due to the high number of modules.

* The goal is to reduce the number of modules by optimizing how data is transformed.

* Option Analysis:

* A. Nesting multiple mapping panel functions:

* Nesting multiple functions in the mapping panel (e.g., using `if()`, `concat()`, `replace()`) eliminates the need for separate modules to set and reset variables for each transformation.

* This is a highly efficient technique to transform data in fewer modules, making it the correct answer.

* B. Using a Compose a string module and Text Parser:

* This involves additional modules (Compose a string + Text Parser) instead of reducing the number of modules. It is not an optimal solution to this problem.

* C. Setting the scenario to Auto Commit:

* The Auto Commit setting helps with transactional control and does not reduce the number of modules in a scenario.

* Why Nesting Mapping Functions is Effective:

* Efficiency: Complex transformations can be performed inline within a single mapping panel.

* Readability: Proper nesting and naming conventions make it easier to understand the logic without adding unnecessary modules.

* Scalability: This approach keeps the scenario compact and reduces complexity as the scenario grows.

* How to Implement:

* Open the mapping panel in relevant modules.

* Use multiple nested functions like `if()`, `concat()`, `add()`, etc., within the mapping expressions.

* Test the mapping thoroughly to ensure correctness.

12. Frage

REST APIs commonly implement CRUD operations, including Create, Read, Update, and Delete.

Which two actions is an object ID generally required to be provided as an input? Choose two.

- A. Respond
- B. Create
- C. Update
- D. Delete

Antwort: C,D

Begründung:

* Object ID in CRUD Operations: REST APIs commonly use CRUD operations to interact with resources. The Object ID serves as a unique identifier for the resource and is generally required for the following actions:

* A. Update:

* To update a specific resource, the API must know which resource to modify. The Object ID is used to identify the exact resource that should be updated.

* Example: A PUT or PATCH request typically requires the Object ID in the URL or body of the request.

* URL Example:

PUT /tasks/{id}

* B. Delete:

* Similarly, when deleting a specific resource, the Object ID is needed to ensure the correct resource is removed.

* Example: A DELETE request requires the Object ID in the URL to target the specific resource.

* URL Example:

DELETE /tasks/{id}

* Why Not Other Options?

* C. Respond: This is not a standard CRUD operation in REST APIs and does not involve an Object ID.

* D. Create: The Create operation (typically POST) does not require an Object ID because the resource does not yet exist. Instead, the API usually generates the Object ID after creation.

13. Frage

Which action in Fusion enables resource sharing, such as connections, data stores, and keys?

- A. Create a new group
- **B. Create a new team**
- C. Create a new organization

Antwort: B

Begründung:

* Understanding the Requirement:

* The user wants to enable resource sharing in Fusion, including connections, data stores, and keys.

* Resource sharing is necessary to allow multiple scenarios or users to access shared resources efficiently within the same Fusion environment.

* Why Option B ("Create a new team") is Correct:

* Teams in Fusion:

* Teams are a feature in Adobe Workfront Fusion designed to group users together within an organization.

* By creating a team, you can enable shared access to resources such as API connections, data stores, and authentication keys, streamlining collaboration and avoiding duplication.

* Resource Sharing with Teams:

* All members of the team can access shared resources (e.g., connections), allowing consistent and collaborative scenario development and execution.

* Example: If multiple users within a team need to use the same API connection, creating a team allows the connection to be configured once and shared among all team members.

* Why the Other Options are Incorrect:

* Option A ("Create a new group"):

* Groups in Fusion are used primarily for organizing scenarios or categorizing users but do not inherently allow sharing of resources like connections or keys. Groups lack the resource-sharing functionality of teams.

* Option C ("Create a new organization"):

* Organizations in Fusion represent the highest-level administrative entity. While creating an organization allows resource sharing among all users within the organization, it is not the recommended solution for managing resource sharing in smaller or more focused groups, such as project teams.

* Steps to Create a New Team and Share Resources:

* Log in to Adobe Workfront Fusion.

* Navigate to the Admin Panel or Team Management section.

* Select Create a New Team and provide a name for the team.

* Assign users to the team by adding their Fusion accounts.

* Configure shared resources (e.g., connections, data stores, keys) to be accessible by the team.

* Save the settings, and all team members will now have access to the shared resources.

* How This Solves the Problem:

* Creating a team ensures that all resources, such as connections, data stores, and keys, are accessible to team members without requiring individual duplication or configuration. It simplifies collaboration and promotes consistency across scenarios.

14. Frage

A Fusion Developer receives frequent notifications that a specific Scenario has been stopped. Upon investigation, the developer notes that there is nothing wrong with the data or process in the scenario, but that the error always occurs on a specific module that calls a third-party system. The error recorded is consistently a service unavailable error, particularly during times of high network traffic to the target system.

Which action should the Fusion Developer take to reduce the number of times the scenario is automatically stopped by Fusion?

- A. Add an additional route after the failing module with a repeater to retry errors.
- B. Add an error handler to the Module and select a Break directive.
- C. Update the Module settings to automatically ignore failed executions.
- D. Update the Scenario settings to automatically retry failed executions.

Antwort: D

Begründung:

In this scenario, the error consistently arises due to the unavailability of a third-party service during high traffic times. This is a temporary issue and does not indicate a problem with the data or process. The recommended approach in such cases is to configure the scenario to retry failed executions:

* Update Scenario Settings:

* In Workfront Fusion, you can configure scenarios to automatically retry a failed execution.

* This option ensures that temporary issues, like service unavailability, are retried after a delay, reducing the chances of the scenario being stopped permanently.

* This is particularly useful when dealing with network traffic spikes or third-party API throttling.

* Why Not Other Options?

* B. Update the Module settings to automatically ignore failed executions: Ignoring failed executions would cause incomplete or incorrect data to flow through the scenario, leading to potential downstream issues.

* C. Add an error handler to the Module and select a Break directive: While error handlers are useful, the Break directive stops the scenario from processing further, which is not ideal for a temporary issue.

* D. Add an additional route after the failing module with a repeater: Adding a repeater increases complexity and is unnecessary when the retry option is already available in scenario settings.

15. Frage

A user needs to dynamically create custom form field options in two customer environments.

Given this image, which type of Workfront module is referenced in the formula with the parameterID value?

- A. Read Related Records
- B. Search
- **C. Custom API Call**
- D. Misc Action

Antwort: C

Begründung:

- * Understanding the Image and Context:
- * The image provided represents an HTTP module in Workfront Fusion with a URL that dynamically references various data points (e.g., parameterID, customer.domain, emailAddr).
- * The structure of the URL indicates a call to the Workfront API (/api/v1.0/), using parameters to pass dynamic data such as parameterID, username, and password.
- * Why Option A ("Custom API Call") is Correct:
- * The HTTP module shown in the image is a custom API call because it interacts with Workfront's API endpoints by passing dynamic parameters through the URL.
- * Custom API Call modules allow users to manually configure requests to endpoints in cases where no predefined Workfront Fusion module exists for the operation. This is evident in the example, where specific fields like parameterID, customer.domain, and others are manually mapped to the API URL.
- * Example Use Case: Dynamically creating custom form field options by sending a POST/PUT request to the Workfront API with specific parameters (like label and value) for each environment.
- * Why the Other Options are Incorrect:
- * Option B ("Misc Action"): This refers to predefined actions in Workfront Fusion for handling simple tasks. The HTTP module is not categorized under Misc Actions as it involves direct API interaction.
- * Option C ("Read Related Records"): This module is used to fetch data related to Workfront objects (e.g., related tasks or documents). It doesn't allow dynamic parameter passing or URL customization as seen here.
- * Option D ("Search"): The Search module is used for querying Workfront objects based on specific criteria but does not involve making direct API calls or sending HTTP requests with custom parameters.
- * Steps to Configure a Custom API Call in Workfront Fusion:
- * Add the HTTP Module to your scenario.
- * Select the appropriate HTTP method (e.g., GET, POST, PUT). In this case, a POST or PUT method would be used to create or update custom form fields.
- * Enter the API endpoint in the URL field, as shown in the image.
- * Map dynamic values to the parameters by referencing fields from previous modules in the scenario. For instance:
- * customer.domain: Extracted from prior steps.
- * parameterID, label, and value: Dynamically passed based on input data.
- * Authenticate the request using a username and password or an API token.
- * Test the module to ensure the API call works as expected.
- * How This Solves the Problem:
- * By using a Custom API Call (via the HTTP module), the user can dynamically interact with the Workfront API to create or modify custom form field options across multiple customer environments, passing the required parameters programmatically.
- References and Supporting Documentation:
- * Adobe Workfront Fusion HTTP Module Documentation
- * Workfront API Documentation

16. Frage

.....

Die Adobe AD0-E902 Zertifizierungsprüfung ist eine sehr populäre Prüfung. Obwohl es sehr schwierig zu bestehen ist, können Sie diese Prüfung leichter bestehen, wenn Sie die richtige Methode finden. Und Wir Pass4Test sind Ihre beste Wahl. Mit der 100%-Hitrate Prüfungsunterlagen von Pass4Test können Sie alle Probleme in der Adobe AD0-E902 Zertifizierungsprüfung auslösen. Wenn Sie die Prüfungsfragen und Testantworten ernst lernen, gibt es keine Probleme für Sie. Und nach dem Kauf können Sie einjährigen kostenlosen Aktualisierungsservice bekommen. (innerhalb einem Jahr) Sie können über die gewünschten Adobe AD0-E902 Schulungsunterlagen beherrschen, wenn Sie auf jeden Fall die neueste Version bekommen. Probieren Sie sofort, bitte.
