100% Pass Google - Associate-Data-Practitioner–Valid Exam Format

P.S. Free & New Associate-Data-Practitioner dumps are available on Google Drive shared by Actual4test: https://drive.google.com/open?id=1UBcdh0AUdB4ZduqaQc73FPQ9380abSCc

As you can find that there are three versions of our Associate-Data-Practitioner exam questions: the PDF, Software and APP online. Among them, the Software version has the function to stimulate the exam which can help the learners be adjusted to the atmosphere, pace and environment of the Real Associate-Data-Practitioner Exam. So our Software version of our Associate-Data-Practitioner learning guide can help you learn the study materials and prepare for the test better if you already know all the information about the real exam.

There are more opportunities for possessing with a certification, and our Associate-Data-Practitioner study tool is the greatest resource to get a leg up on your competition, and stage yourself for promotion. When it comes to our time-tested Associate-Data-Practitioner latest practice dumps, for one thing, we have a professional team contains a lot of experts who have devoted themselves to the research and development of our Associate-Data-Practitioner Exam Guide, thus we feel confident enough under the intensely competitive market. For another thing, conforming to the real exam our Associate-Data-Practitioner study tool has the ability to catch the core knowledge. So our customers can pass the exam with ease.

Google Cloud Associate Data Practitioner Latest Material Can Help You Save Much Time - Actual4test

You can practice all the difficulties and hurdles which could be faced in an actual Google exam. It also assists you in boosting confidence and reducing problem-solving time. The Pass4future designs Associate-Data-Practitioner desktop-based practice software for desktops, so you can install it from a website and then use it without an internet connection. You only need an internet connection to verify the license of the products. No other plugins are required to employ it.

Google Cloud Associate Data Practitioner Sample Questions (Q20-Q25):

NEW QUESTION # 20
You work for a healthcare company. You have a daily ETL pipeline that extracts patient data from a legacy system, transforms it, and loads it into BigQuery for analysis. The pipeline currently runs manually using a shell script. You want to automate this process and add monitoring to ensure pipeline observability and troubleshooting insights. You want one centralized solution, using open-source tooling, without rewriting the ETL code. What should you do?

- A. Create a direct acyclic graph (DAG) in Cloud Composer to orchestrate a pipeline trigger daily. Monitor the pipeline's

execution using the Apache Airflow web interface and Cloud Monitoring.
- B. Create a Cloud Run function that runs the pipeline daily. Monitor the functions execution using Cloud Monitoring.
- C. Configure Cloud Dataflow to implement the ETL pipeline, and use Cloud Scheduler to trigger the Dataflow pipeline daily. Monitor the pipelines execution using the Dataflow job monitoring interface and Cloud Monitoring.
- D. Use Cloud Scheduler to trigger a Dataproc job to execute the pipeline daily. Monitor the job's progress using the Dataproc job web interface and Cloud Monitoring.

Answer: A

Explanation:
Comprehensive and Detailed in Depth Explanation:
Why A is correct:Cloud Composer is a managed Apache Airflow service, which is a popular open-source workflow orchestration tool.
DAGs in Airflow can be used to automate ETL pipelines.
Airflow's web interface and Cloud Monitoring provide comprehensive monitoring capabilities.
It also allows you to run existing shell scripts.
Why other options are incorrect:B: Dataflow requires rewriting the ETL pipeline using its SDK.
C: Dataproc is for big data processing, not orchestration.
D: Cloud Run functions are for stateless applications, not long-running ETL pipelines.

NEW QUESTION # 21
Your company uses Looker as its primary business intelligence platform. You want to use LookML to visualize the profit margin for each of your company's products in your Looker Explores and dashboards. You need to implement a solution quickly and efficiently. What should you do?

- A. Create a derived table that pre-calculates the profit margin for each product, and include it in the Looker model.
- B. Apply a filter to only show products with a positive profit margin.
- C. Define a new measure that calculates the profit margin by using the existing revenue and cost fields.
- D. Create a new dimension that categorizes products based on their profit margin ranges (e.g., high, medium, low).

Answer: C

Explanation:
Comprehensive and Detailed in Depth Explanation:
Why B is correct:Defining a new measure in LookML is the most efficient and direct way to calculate and visualize aggregated metrics like profit margin.
Measures are designed for calculations based on existing fields.
Why other options are incorrect:A: Filtering doesn't calculate or visualize the profit margin itself.
C: Dimensions are for categorizing data, not calculating aggregated metrics.
D: Derived tables are more complex and unnecessary for a simple calculation like profit margin, which can be done using a measure.

NEW QUESTION # 22
Your company has several retail locations. Your company tracks the total number of sales made at each location each day. You want to use SQL to calculate the weekly moving average of sales by location to identify trends for each store. Which query should you use?

- A. ☐
- B. ☐
- C. ☐
- D. ☐

Answer: B

Explanation:
To calculate the weekly moving average of sales by location:
* The query must group bystore_id(partitioning the calculation by each store).
* TheORDER BY dateensures the sales are evaluated chronologically.
* TheROWS BETWEEN 6 PRECEDING AND CURRENT ROWspecifies a rolling window of 7 rows (1 week if each row represents daily data).

* The AVG(total_sales) computes the average sales over the defined rolling window.

Chosen query meets these requirements:

PARTITION BY store_id groups the calculation by each store.

☐

ORDER BY date orders the rows correctly for the rolling average.

☐

ROWS BETWEEN 6 PRECEDING AND CURRENT ROW ensures the 7-day moving average.

Extract from Google Documentation: From "Analytic Functions in BigQuery" (https://cloud.google.com /bigquery/docs/reference/standard-sql/analytic-function-concepts):"Use ROWS BETWEEN n PRECEDING AND CURRENT ROW with ORDER BY a time column to compute moving averages over a fixed number of rows, such as a 7-day window, partitioned by a grouping key like store_id."

NEW QUESTION # 23

Your company has developed a website that allows users to upload and share video files. These files are most frequently accessed and shared when they are initially uploaded. Over time, the files are accessed and shared less frequently, although some old video files may remain very popular.

You need to design a storage system that is simple and cost-effective. What should you do?

- A. Create a single-region bucket with Archive as the default storage class.
- B. Create a single-region bucket with custom Object Lifecycle Management policies based on upload date.
- C. Create a single-region bucket. Configure a Cloud Scheduler job that runs every 24 hours and changes the storage class based on upload date.
- D. Create a single-region bucket with Autoclass enabled.

Answer: B

Explanation:

Creating a single-region bucket with custom Object Lifecycle Management policies based on upload date is the most appropriate solution. This approach allows you to automatically transition objects to less expensive storage classes as their access frequency decreases over time. For example, frequently accessed files can remain in the Standard storage class initially, then transition to Nearline, Coldline, or Archive storage as their popularity wanes. This strategy ensures a cost-effective and efficient storage system while maintaining simplicity by automating the lifecycle management of video files.

NEW QUESTION # 24

Your organization uses a BigQuery table that is partitioned by ingestion time. You need to remove data that is older than one year to reduce your organization's storage costs. You want to use the most efficient approach while minimizing cost. What should you do?

- A. Create a view that filters out rows that are older than one year.
- B. Set the table partition expiration period to one year using the ALTER TABLE statement in SQL.
- C. Create a scheduled query that periodically runs an update statement in SQL that sets the "deleted" column to "yes" for data that is more than one year old. Create a view that filters out rows that have been marked deleted.
- D. Require users to specify a partition filter using the alter table statement in SQL.

Answer: B

Explanation:

Setting the table partition expiration period to one year using the ALTER TABLE statement is the most efficient and cost-effective approach. This automatically deletes data in partitions older than one year, reducing storage costs without requiring manual intervention or additional queries. It minimizes administrative overhead and ensures compliance with your data retention policy while optimizing storage usage in BigQuery.

Extract from Google Documentation: From "Managing Partitioned Tables in BigQuery" (https://cloud. google.com/bigquery/docs/partitioned-tables#expiration):"Set a partition expiration time using ALTER TABLE to automatically remove partitions older than a specified duration, reducing storage costs efficiently for ingestion-time partitioned tables."

NEW QUESTION # 25

......

Since the cost of signing up for the Google Cloud Associate Data Practitioner Associate-Data-Practitioner exam dumps is considerable, your main focus should be clearing the Google Cloud Associate Data Practitioner Associate-Data-Practitioner exam

on your first try. Utilizing quality Google Associate-Data-Practitioner Exam Questions is the key to achieving this. Buy the Google Cloud Associate Data Practitioner Associate-Data-Practitioner Exam Dumps created to avoid the stress of searching for tried-and-true Google Associate-Data-Practitioner certification exam preparation.
