2026 Latest Prep4cram DEA-C01 PDF Dumps and DEA-C01 Exam Engine Free Share: <https://drive.google.com/open?id=1sLhfund551Y0BybHuOeluSsV2dy5NfiG>

We can proudly say that our DEA-C01 exam questions are global. So no matter what kinds of DEA-C01 test torrent you may ask, our after sale service staffs will help you to solve your problems of DEA-C01 practice braindump in the most professional way. Since our customers aiming to DEA-C01 study tool is from different countries in the world, and there is definitely time difference among us, we will provide considerate online after-sale service on our DEA-C01 training guide twenty four hours a day, seven days a week, please just feel free to contact with us anywhere at any time.

If you can get a certification, it will be help you a lot, for instance, it will help you get a more job and a better title in your company than before, and the DEA-C01 certification will help you get a higher salary. We believe that our company has the ability to help you successfully pass your exam and get a DEA-C01 certification by our DEA-C01 exam torrent. We can promise that you would like to welcome this opportunity to kill two birds with one stone. If you choose our DEA-C01 Test Questions as your study tool, you will be glad to study for your exam and develop self-discipline, our DEA-C01 latest question adopt diversified teaching methods, and we can sure that you will have passion to learn by our products.

## Exam DEA-C01 Practice | Knowledge DEA-C01 Points

In light of the truth that different people have various learning habits, we launch three DEA-C01 training questions versions for your guidance. In addition, you can freely download the demo of DEA-C01 learning materials for your consideration. We promise there will be no extra charges for such a try, on the contrary, we sincerely suggest you to try the demos of our DEA-C01 Exam Questions and make a well-content choice. You will find that our DEA-C01 training guide is worthy to buy for you time and money!

## Snowflake DEA-C01 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> <li>• <b>Performance Optimization:</b> This topic assesses the ability to optimize and troubleshoot underperforming queries in Snowflake. Candidates must demonstrate knowledge in configuring optimal solutions, utilizing caching, and monitoring data pipelines. It focuses on ensuring engineers can enhance performance based on specific scenarios, crucial for Snowflake Data Engineers and Software Engineers.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Security:</b> The Security topic of the DEA-C01 test covers the principles of Snowflake security, including the management of system roles and data governance. It measures the ability to secure data and ensure compliance with policies, crucial for maintaining secure data environments for Snowflake Data Engineers and Software Engineers.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Data Movement:</b> Snowflake Data Engineers and Software Engineers are assessed on their proficiency to load, ingest, and troubleshoot data in Snowflake. It evaluates skills in building continuous data pipelines, configuring connectors, and designing data sharing solutions.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Data Transformation:</b> The SnowPro Advanced: Data Engineer exam evaluates skills in using User-Defined Functions (UDFs), external functions, and stored procedures. It assesses the ability to handle semi-structured data and utilize Snowpark for transformations. This section ensures Snowflake engineers can effectively transform data within Snowflake environments, critical for data manipulation tasks.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Storage and Data Protection:</b> The topic tests the implementation of data recovery features and the understanding of Snowflake's Time Travel and micro-partitions. Engineers are evaluated on their ability to create new environments through cloning and ensure data protection, highlighting essential skills for maintaining Snowflake data integrity and accessibility.</li> </ul>

## Snowflake SnowPro Advanced: Data Engineer Certification Exam Sample Questions (Q13-Q18):

### NEW QUESTION # 13

A retail company has a customer data hub in an Amazon S3 bucket. Employees from many countries use the data hub to support company-wide analytics. A governance team must ensure that the company's data analysts can access data only for customers who are within the same country as the analysts.

Which solution will meet these requirements with the LEAST operational effort?

- A. Load the data into Amazon Redshift. Create a view for each country. Create separate IAM roles for each country to provide access to data from each country. Assign the appropriate roles to the analysts.
- B. Move the data to AWS Regions that are close to the countries where the customers are. Provide access to each analyst based on the country that the analyst serves.
- **C. Register the S3 bucket as a data lake location in AWS Lake Formation. Use the Lake Formation row-level security features to enforce the company's access policies.**
- D. Create a separate table for each country's customer data. Provide access to each analyst based on the country that the analyst serves.

**Answer: C**

Explanation:

<https://docs.aws.amazon.com/lake-formation/latest/dg/register-data-lake.html>

<https://docs.aws.amazon.com/lake-formation/latest/dg/registration-role.html>

### NEW QUESTION # 14

At what isolation level are Snowflake streams?

- A. Read committed
- **B. Repeatable read**
- C. Read uncommitted
- D. Snapshot

**Answer: B**

Explanation:

Explanation

The isolation level of Snowflake streams is repeatable read, which means that each transaction sees a consistent snapshot of data that does not change during its execution. Streams use time travel internally to provide this isolation level and ensure that queries on streams return consistent results regardless of concurrent transactions on their source tables.

### NEW QUESTION # 15

A company wants to migrate an application and an on-premises Apache Kafka server to AWS.

The application processes incremental updates that an on-premises Oracle database sends to the Kafka server. The company wants to use the replatform migration strategy instead of the refactor strategy.

Which solution will meet these requirements with the LEAST management overhead?

- A. Amazon Kinesis Data Firehose
- B. Amazon Kinesis Data Streams
- C. Amazon Managed Streaming for Apache Kafka (Amazon MSK) provisioned cluster
- **D. Amazon Managed Streaming for Apache Kafka (Amazon MSK) Serverless**

**Answer: D**

### NEW QUESTION # 16

Company A and Company B both have Snowflake accounts. Company A's account is hosted on a different cloud provider and region than Company B's account. Companies A and B are not in the same Snowflake organization.

How can Company A share data with Company B? (Select TWO).

- A. Create a share within Company A's account, and create a reader account that is a recipient of the share. Grant Company B access to the reader account.
- **B. Create a share within Company A's account and add Company B's account as a recipient of that share.**
- **C. Create a separate database within Company A's account to contain only those data sets they wish to share with Company B. Create a share within Company A's account and add all the objects within this separate database to the share. Add Company B's account as a recipient of the share.**
- D. Create a new account within Company A's organization in the same cloud provider and region as Company B's account. Use database replication to replicate Company A's data to the new account. Create a share within the new account and add Company B's account as a recipient of that share.
- E. Use database replication to replicate Company A's data into Company B's account. Create a share within Company B's account and grant users within Company B's account access to the share.

**Answer: B,C**

Explanation:

Explanation

The ways that Company A can share data with Company B are:

Create a share within Company A's account and add Company B's account as a recipient of that share:

This is a valid way to share data between different accounts on different cloud platforms and regions.

Snowflake supports cross-cloud and cross-region data sharing, which allows users to create shares and grant access to other accounts regardless of their cloud platform or region. However, this option may incur additional costs for network transfer and storage replication.

Create a separate database within Company A's account to contain only those data sets they wish to share with Company B. Create a share within Company A's account and add all the objects within this separate database to the share. Add Company B's account as a recipient of the share: This is also a valid way to share data between different accounts on different cloud platforms and regions.

This option is similar to the previous one, except that it uses a separate database to isolate the data sets that need to be shared. This can improve security and manageability of the shared data. The other options are not valid because:

Create a share within Company A's account, and create a reader account that is a recipient of the share. Grant Company B access to the reader account: This option is not valid because reader accounts are not supported for cross-cloud or cross-region data sharing. Reader accounts are Snowflake accounts that can only consume data from shares created by their provider account. Reader accounts must be on the same cloud platform and region as their provider account.

Use database replication to replicate Company A's data into Company B's account. Create a share within Company B's account and grant users within Company B's account access to the share: This option is not valid because database replication cannot be used for cross-cloud or cross-region data sharing.

Database replication is a feature in Snowflake that allows users to copy databases across accounts within the same cloud platform

and region. Database replication cannot copy databases across different cloud platforms or regions.

Create a new account within Company A's organization in the same cloud provider and region as Company B's account Use database replication to replicate Company A's data to the new account Create a share within the new account and add Company B's account as a recipient of that share: This option is not valid because it involves creating a new account within Company A's organization, which may not be feasible or desirable for Company A. Moreover, this option is unnecessary, as Company A can directly share data with Company B without creating an intermediate account.

### NEW QUESTION # 17

When would a Data engineer use table with the flatten function instead of the lateral flatten combination?

- A. When table with FLATTEN is acting like a sub-query executed for each returned row
- **B. When TABLE with FLATTEN requires another source in the from clause to refer to**
- C. When TABLE with FLATTEN requires no additional source in the from clause to refer to
- D. When the LATERAL FLATTEN combination requires no other source in the from clause to refer to

**Answer: B**

Explanation:

Explanation

The TABLE function with the FLATTEN function is used to flatten semi-structured data, such as JSON or XML, into a relational format. The TABLE function returns a table expression that can be used in the FROM clause of a query. The TABLE function with the FLATTEN function requires another source in the FROM clause to refer to, such as a table, view, or subquery that contains the semi-structured data. For example:

SELECT t.value:city::string AS city, f.value AS population FROM cities t, TABLE(FLATTEN(input => t.value:population)) f; In this example, the TABLE function with the FLATTEN function refers to the cities table in the FROM clause, which contains JSON data in a variant column named value. The FLATTEN function flattens the population array within each JSON object and returns a table expression with two columns: key and value.

The query then selects the city and population values from the table expression.

### NEW QUESTION # 18

.....

Choosing to participate in Snowflake certification DEA-C01 exam is a wise choice, because if you have a Snowflake DEA-C01 authentication certificate, your salary and job position will be improved quickly and then your living standard will provide at the same time. But passing Snowflake certification DEA-C01 exam is not very easy, it need to spend a lot of time and energy to master relevant IT professional knowledge. Prep4cram is a professional IT training website to make the training scheme for Snowflake Certification DEA-C01 Exam. At first you can free download part of exercises questions and answers about Snowflake certification DEA-C01 exam on [www.Prep4cram.com](http://www.Prep4cram.com) as a try, so that you can check the reliability of our product. Generally, if you have tried Prep4cram's products, you'll very confident of our products.
