## Identity-and-Access-Management-Architect Exam Pass Guide | 100% Free Professional Latest Salesforce Certified Identity and Access Management Architect Training

Our system is high effective and competent. After the clients pay successfully for the Identity-and-Access-Management-Architect certification material the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the Identity-and-Access-Management-Architect prep guide materials immediately. It takes only a few minutes for you to make the successful payment for our Identity-and-Access-Management-Architect learning file. Our system will automatically send the updates of the Identity-and-Access-Management-Architect learning file to the clients as soon as the updates are available. So our system is wonderful.

### Salesforce Certified Identity and Access Management Architect Sample Questions (Q102-Q107):

NEW QUESTION # 102

A public sector agency is setting up an identity solution for its citizens using a Community built on Experience Cloud and requires the new user registration functionality to capture first name, last name, and phone number. The phone number will be used for identity verification. Which feature should an identity architect recommend to meet the requirements?

- A. Use Login Discovery
- B. Use an external Identity Provider
- C. Create a custom Lightning Web Component
- D. Integrate with social websites (Facebook, LinkedIn, Twitter)

**Answer: A**

Explanation:  
Explanation

Login Discovery allows the administrator to configure a custom login page that collects additional information from users, such as phone number, and use it for identity verification. Login Discovery can also be used to route users to different identity providers based on their input. References: Login Discovery, Customize Your Experience Cloud Site Login Process

### NEW QUESTION # 103

Universal Containers (UC) uses middleware to integrate multiple systems with Salesforce. UC has a strict, new requirement that usernames and passwords cannot be stored in any UC system. How can UC's middleware authenticate to Salesforce while adhering to this requirement?

- A. Create a Connected App that supports the Web Server OAuth Flow.
- B. Create a Connected App that supports the JWT Bearer Token OAuth Flow.
- C. Create a Connected App that supports the User-Agent OAuth Flow.
- D. Create a Connected App that supports the Refresh Token OAuth Flow

**Answer: B**

### NEW QUESTION # 104

IT security at Universal Containers (UC) is concerned about recent phishing scams targeting its users and wants to add additional layers of login protection. What should an Architect recommend to address the issue?

- A. Use the Salesforce Authenticator mobile app with two-step verification
- B. Increase Password complexity requirements in Salesforce.
- C. Implement Single Sign-on using a corporate Identity store.
- D. Lock sessions to the IP address from which they originated.

**Answer: A**

Explanation:  
Explanation

The Salesforce Authenticator mobile app adds an extra layer of security for online accounts with two-factor authentication. It allows users to respond to push notifications or use location services to verify their logins and other account activity<sup>1</sup>. This can help prevent phishing scams and unauthorized access.

References: Salesforce Authenticator, Salesforce Authenticator: Mobile App Security Features, Salesforce Authenticator

### NEW QUESTION # 105

Universal Containers (UC) has decided to use identity connect as its identity provider. UC uses active directory (AD) and has a team that is very familiar and comfortable with managing AD groups. UC would like to use AD groups to help configure Salesforce users. Which three actions can AD groups control through identity connect? Choose 3 answers

- A. Custom permission assignment
- B. Role Assignment
- C. Public Group Assignment
- D. Granting report folder access
- E. Permission sets assignment

**Answer: B,C,E**

Explanation:

AD groups can control public group assignment, role assignment, and permission set assignment through Identity Connect. Identity Connect is a tool that integrates Microsoft Active Directory (AD) user accounts with Salesforce user records<sup>1</sup>. It allows Salesforce admins to leverage the existing user data and group memberships in AD to automate user provisioning and deprovisioning in Salesforce. Identity Connect can map AD groups to Salesforce public groups, roles, and permission sets, and assign them to users based on their group membership<sup>2</sup>. This way, AD groups can control the access level and visibility of users in Salesforce.

AD groups cannot control granting report folder access or custom permission assignment through Identity Connect. These are not supported features of Identity Connect. Report folder access is controlled by the folder sharing settings in Salesforce. Custom permission assignment is controlled by the custom permission settings in Salesforce. References: Get to Know Identity Connect, Map Your Data, [Folder Sharing], [Custom Permissions]

### NEW QUESTION # 106

Northern Trail Outfitters (NTO) leverages Microsoft Active Directory (AD) for management of employee usernames, passwords, permissions, and asset access. NTO also owns a third-party single sign-on (SSO) solution. The third-party SSO solution is used for all corporate applications, including Salesforce.

NTO has asked an architect to explore Salesforce Identity Connect for automatic provisioning and deprovisioning of users in Salesforce.

What role does Identity Connect play in the outlined requirements?

- A. Single Sign-On
- B. Identity Provider
- C. Service Provider
- **D. User Management**

**Answer: D**

Explanation:

Identity Connect can synchronize several Salesforce security constructs from Active Directory-driven administration, particularly the identity and authorization artifacts attached to users. Profiles and permission sets are directly relevant because they define user capabilities in Salesforce. Roles also matter because they shape record access and hierarchy behavior. Public groups can participate in permission design and assignment patterns as well. By contrast, sharing rules and permission set licenses are not the core mapping focus in the same way. The main architectural takeaway is that Identity Connect is about translating directory-based user management into Salesforce access structures, especially those that determine who a user is, what they can do, and where they sit in the org's access model. This is why option D is the best answer in Salesforce terms.

### NEW QUESTION # 107

.....

In order to better meet users' need, our Identity-and-Access-Management-Architect study questions have set up a complete set of service system, so that users can enjoy our professional one-stop service. We not only in the pre-sale for users provide free demo, when buy the user can choose in we provide in the three versions, at the same time, our Identity-and-Access-Management-Architect Training Materials also provides 24-hour after-sales service. Such a perfect one-stop service of our Identity-and-Access-Management-Architect test guide, believe you will not regret your choice, and can better use your time, full study, efficient pass the Identity-and-Access-Management-Architect exam.
