As long as you are willing to exercise on a regular basis, the exam will be a piece of cake, because what our AWS-Solutions-Architect-Associate practice questions include are quintessential points about the exam. They are almost all the keypoints and the latest information contained in our AWS-Solutions-Architect-Associate Study Materials that you have to deal with in the real exam. And we have high pass rate of our AWS-Solutions-Architect-Associate exam questions as 98% to 100%. It is hard to find in the market.

According to different kinds of questionnaires based on study condition among different age groups, we have drawn a conclusion that the majority learners have the same problems to a large extent, that is low-efficiency, low-productivity, and lack of plan and periodicity. As a consequence of these problem, our AWS-Solutions-Architect-Associate test prep is totally designed for these study groups to improve their capability and efficiency when preparing for Amazon exams, thus inspiring them obtain the targeted AWS-Solutions-Architect-Associate certificate successfully. There are many advantages of our AWS-Solutions-Architect-Associate question torrent that we are happy to introduce you and you can pass the exam for sure.

Recently, AWS-Solutions-Architect-Associate exam certification, attaching more attention from more and more people in IT industry, has become an important standard to balance someone's IT capability. Many IT candidates are confused and wonder how to prepare for AWS-Solutions-Architect-Associate exam, but now you are lucky if you read this article because you have found the best method to prepare for the exam from this article. You will ensure to get AWS-Solutions-Architect-Associate Exam Certification after using our AWS-Solutions-Architect-Associate exam software developed by our powerful DumpsValid IT team. If you still hesitate, try to download our free demo of AWS-Solutions-Architect-Associate exam software.

The AWS Certified Solutions Architect - Associate (SAA-C02) exam is designed for individuals who want to validate their knowledge and skills in designing and deploying scalable, highly available, and fault-tolerant systems on Amazon Web Services (AWS). AWS Certified Solutions Architect - Associate (SAA-C03) certification is one of the most popular and in-demand credentials in the cloud computing industry today. Successful completion of the exam demonstrates the ability to identify and define requirements for AWS-based applications, as well as the ability to provide guidance on architectural best practices.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q86-Q91):

NEW QUESTION # 86

A company hosts a website analytics application on a single Amazon EC2 On-Demand Instance. The analytics application is highly resilient and is designed to run in stateless mode.

The company notices that the application is showing signs of performance degradation during busy times and is presenting 5xx errors. The company needs to make the application scale seamlessly.

Which solution will meet these requirements MOST cost-effectively?

- **A. Create an Amazon Machine Image (AMI) of the web application. Apply the AMI to a launch template. Create an Auto Scaling group that includes the launch template. Configure the launch template to use a Spot Fleet. Attach an Application Load Balancer to the Auto Scaling group.**
- B. Create an Amazon Machine Image (AMI) of the web application. Use the AMI to launch a second EC2 On-Demand Instance. Use an Application Load Balancer to distribute the load across the two EC2 instances.
- C. Create an Amazon Machine Image (AMI) of the web application. Use the AMI to launch a second EC2 On-Demand Instance. Use Amazon Route 53 weighted routing to distribute the load across the two EC2 instances.
- D. Create an AWS Lambda function to stop the EC2 instance and change the instance type. Create an Amazon CloudWatch alarm to invoke the Lambda function when CPU utilization is more than 75%.

Answer: A

Explanation:

Auto Scaling is the most effective solution for ensuring seamless scalability of a stateless application. Key points:

Leverages Auto Scaling with a Spot Fleet for cost efficiency and attaches an ALB to distribute traffic.

A and B do not provide automated scaling and would require manual intervention to add more instances.

C changes the instance type but does not scale out horizontally, which is required here.

NEW QUESTION # 87

A company has an application that uses Amazon CloudFront for content that is hosted on an Amazon S3 bucket. After an unexpected refresh, the users are still seeing old content.

Which step should the Solutions Architect take to ensure that new content is displayed?

- A. Create a new cache behavior path with the updated content.
- B. Perform an invalidation on the CloudFront distribution that is serving the content.
- **C. Change the TTL value for removing the old objects**
- **D. Perform a cache refresh on the CloudFront distribution that is serving the content.**

Answer: C,D

NEW QUESTION # 88

A solutions architect needs to optimize a large data analytics job that runs on an Amazon EMR cluster. The job takes 13 hours to finish. The cluster has multiple core nodes and worker nodes deployed on large, compute-optimized instances.

After reviewing EMR logs, the solutions architect discovers that several nodes are idle for more than 5 hours while the job is running. The solutions architect needs to optimize cluster performance.

Which solution will meet this requirement MOST cost-effectively?

- A. Migrate the analytics job core nodes to a memory-optimized instance type to reduce the total job runtime.
- B. Migrate the analytics job to a set of AWS Lambda functions. Configure reserved concurrency for the functions.
- **C. Use the EMR managed scaling feature to automatically resize the cluster based on workload.**
- D. Increase the number of core nodes to ensure there is enough processing power to handle the analytics job without any idle time.

Answer: C

Explanation:

EMR managed scaling dynamically resizes the cluster by adding or removing nodes based on the workload.

This feature helps minimize idle time and reduces costs by scaling the cluster to meet processing demands efficiently.

Option A: Increasing the number of core nodes might increase idle time further, as it does not address the root cause of underutilization.

Option C: Migrating the job to Lambda is infeasible for large analytics jobs due to resource and runtime constraints.

Option D: Changing to memory-optimized instances may not necessarily reduce idle time or optimize costs.

NEW QUESTION # 89

A company wants to durably store data in 8 KB chunks. The company will access the data once every few months. However, when the company does access the data, it must be done with as little latency as possible.

Which AWS service should a Solutions Architect recommend if cost is NOT a factor?

- A. Amazon ElastiCache
- **B. Amazon DynamoDB**
- C. Amazon EBS Cold HDD Volumes
- D. Amazon EBS Throughput Optimized HDD Volumes

Answer: B

NEW QUESTION # 90

A gaming company is building an application that uses a database to store user data. The company wants the database to have an active-active configuration that allows data writes to a secondary AWS Region. The database must achieve a sub-second recovery point objective (RPO).

Options:

- **A. Deploy an Amazon DynamoDB table in the primary Region. Configure global tables for the secondary Region.**
- B. Deploy an Amazon DynamoDB table in the primary Region and the secondary Region. Configure Amazon DynamoDB Streams to invoke an AWS Lambda function to write changes from the table in the primary Region to the table in the secondary Region.
- C. Deploy an Amazon ElastiCache (Redis OSS) cluster. Configure a global data store for disaster recovery. Configure the ElastiCache cluster to cache data from an Amazon RDS database that is deployed in the primary Region.
- D. Deploy an Amazon Aurora MySQL database in the primary Region. Configure a global database for the secondary Region.

Answer: A

Explanation:

A). ElastiCache:Provides in-memory caching, not suitable for persistent, scalable databases.

B). DynamoDB Streams + Lambda:Manages replication manually, increasing latency and operational complexity.

C). Aurora Global Database:Provides high availability but does not support active-active configuration.

D). DynamoDB Global Tables:Provides active-active configuration and sub-second RPO.
