

100% Pass Quiz 2026 Useful NCP-DB-6.10: Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Latest Test Practice

Quality of NCP-DB-6.10 learning quiz you purchased is of prior importance for consumers. Our NCP-DB-6.10 practice materials make it easier to prepare exam with a variety of high quality functions. The quality function of our NCP-DB-6.10 exam questions is observably clear once you download them. We have three kinds of NCP-DB-6.10 Real Exam moderately priced for your reference: the PDF, Software and APP online. And you can choose any version according to your interests and hobbies.

The Nutanix NCP-DB-6.10 pdf questions learning material provided to the customers from ExamTorrent is in three different formats. The first format is PDF format which is printable and portable. It means it can be accessed from tablets, laptops, and smartphones to prepare for the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 exam. The Nutanix NCP-DB-6.10 Pdf Format can be used offline, and candidates can even prepare for it in the classroom or library by printing questions or on their smart devices.

2026 Nutanix Unparalleled NCP-DB-6.10 Latest Test Practice Pass Guaranteed

While Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam preparing for the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam, candidates have to pay extra money when Nutanix introduces new changes. With ExamTorrent you can save money in this scenario as up to 365 days of free updates are available. You can also download a free demo to understand everything about ExamTorrent NCP-DB-6.10 Exam Material before buying. While there are many NCP-DB-6.10 exam question preparation guides available online, it's crucial to be vigilant while making purchases due to the prevalence of online scams. ExamTorrent offers Nutanix NCP-DB-6.10 exam questions for the best exam preparation experience.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q250-Q255):

NEW QUESTION # 250

An administrator created an NDB managed VLAN called PGSQLVLAN40. After deploying PostgreSQL HA, it was noticed that the databases were able to communicate with everything on VLAN 40 only. What can the administrator do to fix the current issue and going forward?

- A. Engage the networking team as this is a network related issue.
- B. Change the Default Gateway on the PostgreSQL servers and update NDB for VLAN PGSQLVLAN40.
- C. Delete the data base servers, VLAN name PGSQLVLAN40 and redeploy the same information under a different VLAN name.
- D. Use VLAN 1 for the PostgreSQL deployment.

Answer: A

Explanation:

The scenario describes a PostgreSQL HA deployment managed by NDB, where an NDB- managed VLAN (PGSQLVLAN40) restricts database communication to only within VLAN 40. This indicates a network isolation issue, likely due to VLAN segmentation or routing misconfiguration, preventing communication with external networks or other VLANs. Since NDB manages the VLAN and assigns it to the database VMs, the issue lies beyond NDB's direct control and involves the underlying network infrastructure (e.g., switches, routers, or Prism Element network settings).

NEW QUESTION # 251

An administrator needs to apply a minor version upgrade of the PostgreSQL software to an Era provisioned instance. Which step should the administrator take before applying the patch?

- A. Create a new software profile.
- B. Migrate a new software profile.
- C. Go to the Software Profile Version widget and click update.
- D. Put the database instance into maintenance mode.

Answer: A

Explanation:

Nutanix Database Service (NDB) supports automated minor version upgrades for PostgreSQL.

Before applying the patch, the administrator should create a new software profile. This is because the software profile contains the database engine binaries and other software required to run the database engine. Therefore, to apply a minor version upgrade, a new software profile with the updated binaries needs to be created. Once the new software profile is created, it can be used to patch the PostgreSQL database.

NEW QUESTION # 252

Refer to the exhibit. An administrator has configured unencrypted Active Directory access as shown in the exhibit. Which port should be allowed through the firewall to ensure NDB can communicate with Active Directory?

Configure Active Directory Access

Configuration Name: [text box]

Domain: [text box]

Primary URL: ldap : [text box] - [text box] + [text box]

Secondary URL: ldap : IP Address - x.x.x.x - [text box] + [text box]

Service Account Username: administrator

Service Account Password: [password box]

Verify [checkbox] NUTANIX

Cancel Save

- A. 0

- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

The exhibit shows the configuration of unencrypted Active Directory (AD) access in NDB, with the "Primary URL" set to ldap:// (indicating LDAP rather than LDAPS). Unencrypted LDAP communication uses port 389 by default. For NDB to communicate with Active Directory, this port must be allowed through the firewall to enable the NDB server to perform authentication and directory lookups using the specified service account (e.g., administrator).

NEW QUESTION # 253

What are two of the required steps to provision a new network in Clusters and extend it to Era?
(Choose two.)

- A. Add the new network in Era Multi-Cluster Management
- B. Add a new subnet to the correct VPC.
- C. Add the new subnet and VLAN in Network Configuration in PE.
- D. Add the new VLAN in Era Networks.

Answer: C,D

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, to provision a new network in Clusters and extend it to Era, you need to:

Add the new subnet and VLAN in Network Configuration in PE.

Add the new VLAN in Era Networks.

These steps ensure that the new network is properly configured in both the Nutanix environment and Era, allowing for seamless communication and operation. Please refer to the official Nutanix documentation and training materials for more detailed information.

NEW QUESTION # 254

An administrator wants to manage an additional database on an existing database server VM.
What field should the administrator look in for this new database?

- A. Unregistered Databases
- B. Registered Databases
- C. Database Name in NDB
- D. Database Server VM

Answer: A

Explanation:

When an administrator wants to manage an additional database on an existing database server VM in NDB, the first step is to identify if the database is already recognized by NDB. The

"Unregistered Databases" field or section within the NDB interface lists databases that are present on a registered database server VM but have not yet been registered with NDB. This allows the administrator to discover and register the new database, enabling full management capabilities (e.g., provisioning, cloning, or patching). Once registered, the database will move to the "Registered Databases" section.

NEW QUESTION # 255

.....

Passing Nutanix real exam is not so simple. Choose right NCP-DB-6.10 exam prep is the first step to your success. The valid braindumps of ExamTorrent is a good guarantee to your success. If you choose our latest practice exam, it not only can 100% ensure you pass NCP-DB-6.10 Real Exam, but also provide you with one-year free updating exam pdf.

New NCP-DB-6.10 Dumps Pdf: <https://www.examtorent.com/NCP-DB-6.10-valid-vce-dumps.html>

This could be high level secret or proprietary data, or simply data that someone NCP-DB-6.10 wasn't authorized to see, When I started teaching, it was painfully obvious I had never given animation enough thought to give meaningful critique.

It means you can take this mock test via any browser like MS Edge, Firefox, Chrome, Internet Explorer, and Safari, If you really want to pass Nutanix Nutanix Certified Professional (NCP) exams for sure, you had better purchase the whole NCP-DB-6.10 Dumps PDF.

Also, it needs to run on Java environment.
