

100% Pass 2026 Salesforce Mule-Dev-202: Salesforce Certified MuleSoft Hyperautomation Developer Updated Valid Test Labs

DOWNLOAD the newest Test4Cram Mule-Dev-202 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=17DU12d13-WhlHZg30xw4HZnbL3-fO2AX>

We try our best to provide the most efficient and intuitive learning methods to the learners and help them learn efficiently. Our Mule-Dev-202 study materials provide the instances, simulation and diagrams to the clients so as to they can understand them intuitively. Based on the consideration that there are some hard-to-understand contents we insert the instances to our Mule-Dev-202 Study Materials to concretely demonstrate the knowledge points and the diagrams to let the clients understand the inner relationship and structure of the knowledge points.

The Mule-Dev-202 exam practice test questions are designed and verified by experienced and qualified Salesforce Mule-Dev-202 exam trainers. They check and verify all Salesforce Mule-Dev-202 exam dumps one by one and offer the best possible answers to a particular Salesforce Mule-Dev-202 Exam Questions. So you will find each Salesforce Mule-Dev-202 exam questions and their respective answers correct and error-free and assist to complete the Mule-Dev-202 exam preparation quickly.

Features of Test4Cram Salesforce Mule-Dev-202 Web-Based Practice Exam

With the rapid market development, there are more and more companies and websites to sell Mule-Dev-202 guide question for learners to help them prepare for exam, but many study materials have very low quality and low pass rate, this has resulting in many candidates failed the exam, some of them even loss confidence of their exam. As for the safe environment and effective product, why don't you have a try for our Mule-Dev-202 Test Question, never let you down! Before your purchase, there is a free demo for you. You can know the quality of our Mule-Dev-202 guide question earlier.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q50-Q55):

NEW QUESTION # 50

AnyAirlines wants to create a new marketing campaign that sends customers special offers every month based on their accrued loyalty points. There is an existing integration for customer data using MuleSoft's API-led three-tier strategy. Loyalty information exists in an external system that can be accessed via an HTTP endpoint provided by the system, but has no current integration. The external ID used will be email address.

The desired output is a CSV file containing customers that includes only the top 10 percent of loyalty point holders. What is the most efficient way to meet this requirement?

- A. 1. Create a MuleSoft Composer flow that utilizes the current Customer integration to select all customers.2. Create an additional MuleSoft Composer flow that retrieves all the Loyalty information.3. Create a MuleSoft Composer flow that combines the two previous results and outputs the top 10 percent to a CSV file.

- B. 1. Have the MuleSoft team develop a new integration that includes a System API to the Loyalty system and uses the existing Customer System API.2. Create a Process API to output the final results.3. Create an Experience API for the business consumers to initiate the integration.
- C. 1. Create a Salesforce Flow that retrieves the Contact data.2. Create a Salesforce Flow that retrieves the Loyalty data.3. Create a Flow Orchestration that uses the two flows and outputs the result to a CSV file.
- D. 1. Have the MuleSoft team develop a new integration that includes a new System API to both the Customer and Loyalty systems.2. Create a Process API to output the final results.3. Create an Experience API for the business consumers to initiate the integration.

Answer: B

Explanation:

Develop System API for Loyalty System:The first step is to develop a new System API that integrates with the Loyalty system. This API will handle communication with the external system via the provided HTTP endpoint.

Reference:MuleSoft API-led Connectivity

Utilize Existing Customer System API:Use the existing System API for customer data to retrieve necessary customer information. Combining these APIs ensures a modular approach and reuse of existing assets.

Reference:API-led Connectivity

Create Process API:Develop a Process API that combines data from both the Customer and Loyalty System APIs. This API will process the data, apply business logic to filter the top 10 percent of loyalty point holders, and format the results.

Reference:Designing Process APIs

Create Experience API:Develop an Experience API to serve the business consumers. This API will provide a user-friendly interface for initiating the integration and retrieving the results as a CSV file.

Reference:API Experience Layer

NEW QUESTION # 51

A MuleSoft developer at AnyAirlines wants to retrieve customer data from an external system.

Before designing a new integration, what should they use to determine if the integration exists and can be reused?

- A. Design Center
- B. Anypoint Studio
- C. MuleSoft Composer
- D. Anypoint Exchange

Answer: D

Explanation:

To determine if an integration exists and can be reused, the MuleSoft developer should use Anypoint Exchange:

Anypoint Exchange:

Anypoint Exchange is a repository where developers can publish, share, and discover reusable assets such as APIs, connectors, templates, and examples. It serves as a centralized location for all reusable components within the MuleSoft ecosystem.

By searching Anypoint Exchange, the developer can find existing integrations or assets that might fulfill the requirements for retrieving customer data, avoiding the need to design and develop a new integration from scratch.

Anypoint Exchange Documentation

NEW QUESTION # 52

Northern Trail Outfitters evaluates multiple standards for the exit criteria of a stage in their Flow Orchestration. Based on their criteria, they want the flow to go down one of three paths.

How should this be built in Flow Orchestration to meet this requirement?

- A. Create two evaluation flows, and execute the second evaluation flow if the first evaluation flow returns false.
- B. Evaluate the criteria for the first two paths in an evaluation flow. Then, use the default path functionality of the decision element for the third path.
- C. Have the evaluation flow return a number variable, and use a decision element to determine which path to execute.
- D. Use the evaluation flow to determine the exit criteria for the current stage. Then, use a separate evaluation flow to determine the entry criteria for each of the three paths.

Answer: C

Explanation:

To implement branching logic based on multiple criteria in Flow Orchestration, you can use the following approach:

Evaluation Flow Returns a Number Variable:

Create an evaluation flow that assesses the exit criteria for the current stage and returns a number variable indicating which path to take (e.g., 1, 2, or 3).

Decision Element:

Use a decision element in Flow Orchestration to evaluate the number variable returned by the evaluation flow.

Based on the value of the variable, the decision element will determine which path to execute next.

This approach allows for clear and maintainable branching logic, ensuring that the flow can proceed down one of three paths based on the defined criteria.

NEW QUESTION # 53

Northern Trail Outfitters needs to update multiple systems outside of Salesforce based on record updates within Salesforce. A hyperautomation practitioner needs to configure Salesforce to call several APIs created by the MuleSoft development team from within a Salesforce flow.

What specifications must be imported into Salesforce to make external services available to a Salesforce flow that enables external invocable actions?

- A. RAML API specifications
- B. External API specifications
- C. Open API specifications
- D. Anypoint API specifications

Answer: C

Explanation:

To enable Salesforce to call external services within a flow, the appropriate specifications must be imported to make these external services available as invocable actions. The correct specification is Open API specifications. OpenAPI Specification (formerly known as Swagger) is a standard for defining APIs which can be easily imported into Salesforce to facilitate the integration and invocation of external services.

Import OpenAPI Specifications: Salesforce allows the import of OpenAPI specifications, which define the available endpoints and operations of an API, making them accessible as invocable actions in a Salesforce flow.

Creating External Services: By importing an OpenAPI definition into Salesforce, it creates an External Service, which you can then use within Flow to interact with the defined APIs.

Flow Integration: Once imported, these services can be integrated into Salesforce Flows to automate processes that require interaction with external systems.

Salesforce External Services and API Integrations

NEW QUESTION # 54

The current date and time is September 28, 2022, at 9:00 a.m.

A process running in a single Secured Session is scheduled to start September 28, 2022, at 10:00 a.m., and run every 45 minutes.

If the process takes one hour to complete when it runs for the first time, when will it run for the second time?

- A. September 28, 2022, at 10:45 a.m.
- B. September 28, 2022, at 10:30 a.m.
- C. September 28, 2022, at 11:30 a.m.
- D. After the first execution is complete

Answer: D

Explanation:

The process running in a single Secured Session is scheduled to start at 10:00 a.m. and run every 45 minutes.

If the process takes one hour to complete the first time, it will start the next run only after the current execution finishes because it's within a single secured session:

First Run:

Scheduled to start at 10:00 a.m.

Takes 1 hour to complete, finishing at 11:00 a.m.

Next Run:

Since the first run takes 1 hour, the next execution can only start after the first one completes.

The subsequent run will then start 45 minutes after the completion of the first run, which is at 11:00 a.m. + 45 minutes = 11:45 a.m.

So, the process will run for the second time at 11:45 a.m.
