Reliable CDP-3002 Exam Cram, CDP-3002 Pass4sure Dumps Pdf

DOWNLOAD the newest VCE4Dumps CDP-3002 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1xCHZQty0OEMlZjSryJSJMcP9vaFoXvr7

The desktop CDP Data Engineer - Certification Exam (CDP-3002) practice test software is similar to the web-based CDP-3002 format as far as its features are concerned. But it works offline only on the Windows operating system. The offline CDP-3002 practice exam can be taken easily just by just installing the software on your Windows laptop or computer. All three CDP Data Engineer - Certification Exam (CDP-3002) formats of VCE4Dumps are according to the latest content of the Cloudera CDP-3002 examination.

No matter you are exam candidates of high caliber or newbies, our CDP-3002 exam quiz will be your propulsion to gain the best results with least time and reasonable money. Not only because the outstanding content of CDP-3002 real dumps that produced by our professional expert but also for the reason that we have excellent vocational moral to improve our CDP-3002 Learning Materials quality. We would like to create a better future with you hand in hand, and heart with heart.

Hot Reliable CDP-3002 Exam Cram | Amazing Pass Rate For CDP-3002 Exam | Trusted CDP-3002: CDP Data Engineer - Certification Exam

They work together and put all their efforts to ensure the top standard of Cloudera CDP-3002 exam practice test questions. The CDP-3002 exam practice test questions are being offered in three different formats. These Cloudera CDP-3002 Exam Questions formats are PDF dumps files, desktop practice test software, and web-based practice test software.

Cloudera CDP Data Engineer - Certification Exam Sample Questions (Q114-Q119):

NEW QUESTION # 114
Consider a PySpark application that calculates the count of rows in a CSV file. The main application file is 'count_rows.py', and it uses a custom library 'data_utils.py'. After packaging, which 'spark-submit' command correctly submits this job including the custom library?

- A. 'spark-submit -py-files data utils.py count_rows.py'
- B. 'spark-submit --files data_utils.py count_rows.py'
- C. 'spark-submit --archives data_utils.py count_rows.py'
- D. 'spark-submit --jars data utils.py count_rows.py'

Answer: A

Explanation:
When submitting a PySpark job that relies on additional Python files (like custom libraries), the '-py-files' option is used to include these files. In this case, 'data utils.py' is a Python file needed by 'count_rows.py', so the correct command is 'spark-submit --py- files data utils.py count_rows.py'.

NEW QUESTION # 115
An Airflow DAG is designed to ingest data from multiple sources, transform it, and load it into a data warehouse. The transformation step is resource-intensive and should not run during peak hours (9 AM to 5 PM). How can you configure the DAG to meet this requirement?

- A. Set the max_active_runs parameter to limit executions during peak hours.
- B. Use the time_sensor operator to delay the transformation task until off-peak hours.
- C. Configure the DAG's schedule interval and use the TimeDelta sensor for precise timing.
- D. Utilize the BranchPythonOperator to dynamically skip the transformation task during peak hours.

Answer: D

Explanation:
The BranchPythonOperator can be used to implement conditional logic within a DAG, allowing tasks to be dynamically skipped based on certain conditions, such as the current time. This operator can evaluate if the current time is within peak hours and, based on that, choose a path that either skips or proceeds with the resource-intensive transformation task. While time_sensor and TimeDelta are not standard Airflow components for this purpose, and max_active_runs controls concurrent runs rather than timing, the BranchPythonOperator offers a direct way to control task flow based on time-based conditions.

NEW QUESTION # 116
For a dataset that is used multiple times in different transformations but is not large enough to warrant disk storage, which caching level in Apache Spark is most appropriate?

- A. MEMORY ONLY
- B. DISK ONLY
- C. MEMORY AND DISK SER
- D. MEMORY ONLY SER

Answer: A

Explanation:
For datasets that are used multiple times across transformations and are not large enough to require disk storage, MEMORY_ONLY is the most appropriate caching level. This level stores the dataset in memory without serialization, offering fast access for subsequent transformations, making it ideal for small to moderately sized datasets that fit entirely in memory.

NEW QUESTION # 117
How does setting the "priority_weight" parameter in Airflow tasks influence the scheduler's behavior?

- A. It determines the order in which tasks are executed within the same DAG.
- B. It allocates more CPIJ and memory resources to tasks with higher priority weights.
- C. It influences the order in which tasks are selected for execution across multiple DAGs competing for resources.
- D. It sets a fixed time slot during which the task must be executed, overriding the scheduler's automatic timing.

Answer: C

Explanation:
The "priority_weight" parameter in Airflow tasks is used to influence the scheduler's decision-making when multiple tasks across different DAGs are competing for execution resources. Tasks with higher priority weights are more likely to be selected for execution first. This parameter does not affect the execution order of tasks within the same DAG or allocate more computational resources to tasks; it primarily affects the scheduler's prioritization of tasks across DAGs.

NEW QUESTION # 118
How does Airflow handle task dependencies?

- A. By specifying dependencies through the depends_on_past parameter in task definitions
- B. By using the set_upstream() or set_downstream() methods, or the bitshift operators (]] and [[)
- C. By using the ExternalTaskSensor to pause execution until an external condition is met
- D. By manually triggering tasks in the correct order

Answer: B

Explanation:
Airflow handles task dependencies by allowing users to define the relationships between tasks directly in the code. This can be done using the set_upstream() and set_downstream() methods, or more commonly, with the bitshift operators (J] for downstream and [I for upstream). While depends_on_past controls whether a task can run based on the success of its previous run and the ExternalTaskSensor waits for a condition outside of the DAG, it's the direct task-to-task dependencies that are primarily managed through these methods or operators.

NEW QUESTION # 119
......

The modern Cloudera world is changing its dynamics at a fast pace. To stay and compete in this challenging market, you have to learn and enhance your in-demand skills. Fortunately, with the CDP Data Engineer - Certification Exam (CDP-3002) certification exam you can do this job nicely and quickly. To do this you just need to enroll in the CDP Data Engineer - Certification Exam (CDP-3002) certification exam and put all your efforts to pass the CDP Data Engineer - Certification Exam (CDP-3002) certification exam.
