NEW QUESTION # 109

A customer has recently placed check scanners in some of their branches across Europe. The scanners send the scanned images of the checks to the bank's data center through a web service that goes through an F5 load balancer. The images then go through the bank's Apache web servers and are processed by an application server named ImageSmart. Eventually, the images are stored in a cluster of Oracle databases.

The bank's tellers log into ImageSmart through a Citrix Portal and have the capability to review the checks and approve them.
