Advanced HPE Storage Integrator Solutions Written Exam (HPE7-J02) prep material there is. The 3 kinds of HP HPE7-J02 preparation formats ensure that there are no lacking points in a student when he attempts the actual HPE7-J02 exam. The Advanced HPE Storage Integrator Solutions Written Exam (HPE7-J02) exam registration fee varies between 100\$ and 1000\$, and a candidate cannot risk wasting his time and money, thus we ensure your success if you study from the updated HP HPE7-J02 practice material. We offer the demo version of the actual Advanced HPE Storage Integrator Solutions Written Exam (HPE7-J02) questions so that you may confirm the validity of the product before actually buying it, preventing any sort of regret.

No matter where you are, we will ensure that you can use our HPE7-J02 guide quiz at any time. We have provided you with three versions for your choice: the PDF, Software and APP online. At home, you can use the Software. Outside, you can use the APP version of our HPE7-J02 Study Materials. If you like the aroma of paper, you can choose the PDF version. You can carry the printed material with you and write your own notes on it. If you want to know more about them, just free download the demos of our HPE7-J02 exam questions.

As long as you are willing to buy our HPE7-J02 preparation exam, coupled with your careful preparation, we can guarantee that you will get the HPE7-J02 certification for sure for we have been the brand in this field and welcomed by tens of thousands of our customers. Not only save you a lot of time and energy, but also can make your mood no longer anxious on the coming HPE7-J02 Exam. So, for your future development, please don't hesitate to use our HPE7-J02 actual exam.

HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

You are analyzing a customer environment with two Alletra 6000 arrays in a VMware stretched cluster. Application latency differs slightly depending on whether the VM is on Datastore01 or Datastore02.

Question: Based on this scenario, what would you recommend to equalize latency for the workload?

- A. Issue pinning option for Datastore02 for lower latency.
- B. Issue handover to the volume collection hosting Datastore01.

- C. Relocate the workload on Datastore01 to a volume collection shared with Datastore02.
- D. Relocate the workload on Datastore02 to a volume collection shared with Datastore01.

Answer: D

NEW QUESTION # 24

Your customer is a regional bank with branches in two different cities. Each branch is run as an isolated independent business and IT manages their SANs as separate fabrics to limit the scope of any failure. They use B-Series Switches. The customer has requested a disaster recovery option that will allow replication between the two sites without merging the fabrics. Which SAN technology meets the requirements?

- A. FCIP
- B. Fabric partitioning
- C. FC-FC routing
- D. NPIV

Answer: C

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

FC-FC routing (also known as Fibre Channel Routing / LSANs on B-Series switches) allows replication between separate SAN fabrics without merging them. This supports disaster recovery scenarios while preserving fabric isolation, exactly matching the bank's requirement.

Distractors:

A: FCIP tunnels extend Fibre Channel over IP networks, but this typically merges SAN domains.

C: NPIV (N_Port ID Virtualization) allows multiple virtual WWNs per port, not cross-fabric replication.

D: Fabric partitioning is zoning and segmentation within a single fabric, not between independent fabrics.

Key Concept: FC-FC routing on Brocade (B-Series) for SAN isolation with replication.

Reference: HPE B-Series SAN Design Guide, Brocade FCR/LSAN Concepts.

NEW QUESTION # 25

You are meeting with a customer who wants to replace their current file storage system. You plan to recommend HPE GreenLake for File Storage. The customer asks whether the solution can provide cross- protocol access to the same data using both NFS and SMB simultaneously.

What is the impact on your design?

- A. This is perfectly possible with HPE GreenLake for File Storage by creating two file shares (one for each protocol) and setting up replication
- B. A 3rd-party SDS solution such as Qumulo or Scality should be discussed since the HPE GreenLake for File Storage does not support this
- C. Two different IP pools are required, one for each access protocol. The virtual IP pool address enables cross-protocol functionality
- D. HPE GreenLake for File Storage supports native cross-protocol access with NFS, SMB, and S3. You must enable both protocols per share

Answer: D

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE GreenLake for File Storage, powered by VAST Data software, natively supports cross-protocol access (NFS, SMB, and S3) to the same dataset. This means a file written via NFS can be accessed via SMB or S3 without replication. For cross-protocol access, both protocols must be enabled at the share/bucket level.

This is a core differentiator of HPE's GreenLake for File Storage solution.

Distractors:

A: Wrong, because GreenLake for File Storage already has native multi-protocol support - no need for 3rd party SDS.

C: Incorrect, as replication between separate shares is not required; it is a native capability.

D: Misleading - IP pools are used for load balancing and client connectivity, but not required to enable cross- protocol access.

Key Concept: Multi-protocol access in HPE GreenLake for File Storage (NFS/SMB/S3).

NEW QUESTION # 26

Your customer is beginning to convert their applications to cloud-native apps on Kubernetes. They are considering HPE GreenLake for Containers.

Which statement about this platform is true?

- A. Supports only cloud-native applications.
- **B. Provides open-source Kubernetes with simplified management.**
- C. Supports legacy virtualization technologies with manual configuration for containers.
- D. Provides tools for orchestration of containers without microservices support.

Answer: B

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE GreenLake for Containers delivers an enterprise-grade Kubernetes platform, leveraging open- source Kubernetes but with simplified lifecycle management, monitoring, and integration with HPE infrastructure. It provides full support for containerized workloads, whether cloud-native or modernized traditional applications.

Distractors:

A: Incorrect - not about legacy virtualization.

B: Incorrect - microservices are supported; orchestration is Kubernetes-native.

D: Incorrect - it supports both cloud-native and modernized workloads.

Key Concept: GreenLake for Containers = Kubernetes with simplified enterprise management.

Reference: HPE GreenLake for Containers Overview.

NEW QUESTION # 27

A pool of Microsoft SQL servers started to use the Alletra 6000 family array six months ago. The data growth has been higher than expected, and the performance of the databases is facing some latency issues.

Which method would allow both capacity and performance to grow when expanding the array, while keeping the management simple?

- A. By initially selecting the timeless storage option for the array.
- **B. By adding more arrays and capacity to a single scale-out group.**
- C. By selecting more flash to cache ratio on the expansion shelves.
- D. By including more NIC cards to load balance host traffic.

Answer: B

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE Alletra 6000 is a scale-out architecture array. Adding more arrays to a single scale-out group increases both performance (IOPS, throughput) and capacity, while maintaining single-pane management via HPE Data Services Cloud Console. This is the most efficient way to address both capacity growth and latency reduction for SQL workloads.

Distractors:

B: Adding NICs may help with throughput but not backend latency or capacity scaling.

C: Flash-to-cache ratios can optimize read caching but don't fundamentally increase system-wide performance.

D: Timeless storage is a procurement/licensing option, not a performance/capacity scaling method.

Key Concept: Alletra 6000 scale-out clustering for balanced growth of capacity and performance.
