Everyone is not willing to fall behind, but very few people take the initiative to change their situation. Take time to make a change and you will surely do it. Our Professional-Cloud-Network-Engineer actual test guide can give you some help. Our company aims to help ease the pressure on you to prepare for the exam and eventually get a certificate. Obtaining a certificate is equivalent to having a promising future and good professional development. Our Professional-Cloud-Network-Engineer Study Materials have a good reputation in the international community and their quality is guaranteed. Why don't you there have a brave attempt? You will certainly benefit from your wise choice.

The price for Professional-Cloud-Network-Engineer study materials is quite reasonable, no matter you are a student at school or an employee in the company, you can afford it. Just think that you just need to spend some money, you can get the certificate. What's more, Professional-Cloud-Network-Engineer exam materials are compiled by skilled professionals, and they cover the most knowledge points and will help you pass the exam successfully. We have online and offline chat service stuff, they have the professional knowledge about Professional-Cloud-Network-Engineer Exam Dumps, and you can have a chat with them if you have any questions.

Google Professional-Cloud-Network-Engineer Exam Questions - 100% Success

Our company has a professional team of experts to write Professional-Cloud-Network-Engineer preparation materials and will constantly update it to ensure that it is synchronized with the exam content. In addition to the high quality, reasonable price and so on, we have many other reasons to make you choose our Professional-Cloud-Network-Engineer Actual Exam. There are three versions of our Professional-Cloud-Network-Engineer exam questions: PDF, Software and APP online which can provide you the varied study experiences.

Google Cloud Certified - Professional Cloud Network Engineer Sample Questions (Q218-Q223):

NEW QUESTION # 218

You are using a 10-Gbps direct peering connection to Google together with the gsutil tool to upload files to Cloud Storage buckets from on-premises servers. The on-premises servers are 100 milliseconds away from the Google peering point. You notice that your uploads are not using the full 10-Gbps bandwidth available to you. You want to optimize the bandwidth utilization of the connection. What should you do on your on-premises servers?

- A. Remove the -m flag from the gsutil command to enable single-threaded transfers.
- B. Use the perfdiag parameter in your gsutil command to enable faster performance: gsutil perfdiag gs://[BUCKET NAME].
- C. Tune TCP parameters on the on-premises servers.
- D. Compress files using utilities like tar to reduce the size of data being sent.

Answer: C

Explanation:

<https://cloud.google.com/blog/products/gcp/5-steps-to-better-gcp-network-performance?hl=nl>

NEW QUESTION # 219

You are configuring the firewall endpoints as part of the Cloud Next Generation Firewall (Cloud NGFW) intrusion prevention service in Google Cloud. You have configured a threat prevention security profile, and you now need to create an endpoint for traffic inspection. What should you do?

- A. Attach the profile to the VPC network, create a firewall endpoint within the zone, and use a firewall policy rule to apply the L7 inspection.
- B. Create a firewall endpoint within the zone, associate the endpoint to the VPC network, and use a firewall policy rule to apply the L7 inspection.
- C. Create a Private Service Connect endpoint within the zone, associate the endpoint to the VPC network, and use a firewall policy rule to apply the L7 inspection.
- D. Create a firewall endpoint within the region, associate the endpoint to the VPC network, and use a firewall policy rule to apply the L7 inspection.

Answer: B

Explanation:

Explanation: To apply Layer 7 (L7) inspection for intrusion prevention, you must create a firewall endpoint within the zone where the traffic inspection is required. This endpoint is then associated with the VPC network, and a firewall policy rule is applied for the L7 inspection.

NEW QUESTION # 220

You are designing the architecture for your organization so that clients can connect to certain Google APIs. Your plan must include a way to connect to Cloud Storage and BigQuery. You also need to ensure the traffic does not traverse the internet. You want your solution to be cloud-first and require the least amount of configuration steps. What should you do?

- A. Configure Private Google Access on the VPC resource. Create a default route to the internet.
- B. Configure Cloud NAT and remove the default route to the internet.

- C. Configure a global Secure Web Proxy and remove the default route to the internet.
- **D. Configure Private Google Access on the subnet resource. Create a default route to the internet.**

Answer: D

Explanation:

Enabling Private Google Access on the subnet allows VMs to access Google APIs (like Cloud Storage and BigQuery) directly, without routing traffic over the internet. This approach is cloud-native and involves minimal setup, aligning with a cloud-first strategy.

NEW QUESTION # 221

You are responsible for designing a new connectivity solution between your organization's on-premises data center and your Google Cloud Virtual Private Cloud (VPC) network. Currently, there is no end-to-end connectivity. You must ensure a service level agreement (SLA) of 99.99% availability. What should you do?

- A. Use HA VPN. Configure one tunnel from each interface of the VPN gateway to connect to the corresponding interfaces on the peer gateway on-premises. Configure one Cloud Router and enable global routing in the VPC.
- **B. Use a Direct Peering connection between your on-premises data center and Google Cloud. Configure Classic VPN with two tunnels and one Cloud Router.**
- C. Use one Dedicated Interconnect connection in a single metropolitan area. Configure one Cloud Router and enable global routing in the VPC.
- D. Use two Dedicated Interconnect connections in a single metropolitan area. Configure one Cloud Router and enable global routing in the VPC.

Answer: B

NEW QUESTION # 222

You need to create a new VPC network that allows instances to have IP addresses in both the 10.1.1.0/24 network and the 172.16.45.0/24 network. What should you do?

- A. Create unique DNS records for each service that sends traffic to the desired IP address.
- **B. Configure an alias-IP range of 172.16.45.0/24 on the virtual instances within the VPC subnet of 10.1.1.0/24.**
- C. Use VPC peering to allow traffic to route between the 10.1.0.0/24 network and the 172.16.45.0/24 network.
- D. Configure global load balancing to point 172.16.45.0/24 to the correct instance.

Answer: B

NEW QUESTION # 223

.....

Our evaluation system for Professional-Cloud-Network-Engineer test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our Professional-Cloud-Network-Engineer test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the Professional-Cloud-Network-Engineer Exam Torrent so that you can arrange the learning tasks properly and focus on the targeted learning tasks with Professional-Cloud-Network-Engineer test questions.
