

Exam PSE-Strata-Pro-24 Demo & Sample PSE-Strata-Pro-24 Questions Pdf

BTW, DOWNLOAD part of PassCollection PSE-Strata-Pro-24 dumps from Cloud Storage: https://drive.google.com/open?id=1koWCJq_Zl8zWrdPHmZgIja36pxVXe_D6

Our PSE-Strata-Pro-24 study braindumps can be very good to meet user demand in this respect, allow the user to read and write in a good environment continuously consolidate what they learned. Our PSE-Strata-Pro-24 prep guide has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit PSE-Strata-Pro-24 Exam Questions. It points to the exam heart to solve your difficulty. So high quality materials can help you to pass your exam effectively, make you feel easy, to achieve your goal.

Begin Your Preparation with Palo Alto Networks PSE-Strata-Pro-24 Real Questions. The PassCollection is a reliable platform that is committed to making your preparation for the Palo Alto Networks PSE-Strata-Pro-24 examination easier and more effective. To meet this objective, the PassCollection is offering updated and real Understanding Palo Alto Networks Systems Engineer Professional - Hardware Firewall exam dumps. These Palo Alto Networks PSE-Strata-Pro-24 Exam Questions are approved by experts.

Palo Alto Networks PSE-Strata-Pro-24 Exam | Exam PSE-Strata-Pro-24 Demo - Help you Pass PSE-Strata-Pro-24: Palo Alto Networks Systems Engineer Professional - Hardware Firewall Exam

To obtain the Palo Alto Networks certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the PSE-Strata-Pro-24 exam, you need more external assistance to help yourself. You are lucky to click into this link for we are the most popular vendor in the market. We have engaged in this career for more than ten years and with our PSE-Strata-Pro-24 Exam Questions, you will not only get aid to gain your dreaming Palo Alto Networks certification, but also you can enjoy the first-class service online.

Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

Topic	Details
Topic 1	Architecture and Planning: This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.

Topic 2	• Deployment and Evaluation: This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.
Topic 3	• Business Value and Competitive Differentiators: This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.
Topic 4	• Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.

Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q55-Q60):

NEW QUESTION # 55

When a customer needs to understand how Palo Alto Networks NGFWs lower the risk of exploitation by newly announced vulnerabilities known to be actively attacked, which solution and functionality delivers the most value?

- **A. Advanced Threat Prevention's command injection and SQL injection functions use inline deep learning against zero-day threats.**
- B. Advanced URL Filtering uses machine learning (ML) to learn which malicious URLs are being utilized by the attackers, then block the resulting traffic.
- C. WildFire loads custom OS images to ensure that the sandboxing catches any activity that would affect the customer's environment.
- D. Single Pass Architecture and parallel processing ensure traffic is efficiently scanned against any enabled Cloud-Delivered Security Services (CDSS) subscription.

Answer: A

Explanation:

The most effective way to reduce the risk of exploitation by newly announced vulnerabilities is through Advanced Threat Prevention (ATP). ATP uses inline deep learning to identify and block exploitation attempts, even for zero-day vulnerabilities, in real time.

* Why "Advanced Threat Prevention's command injection and SQL injection functions use inline deep learning against zero-day threats" (Correct Answer B)? Advanced Threat Prevention leverages deep learning models directly in the data path, which allows it to analyze traffic in real time and detect patterns of exploitation, including newly discovered vulnerabilities being actively exploited in the wild.

It specifically targets advanced tactics like:

- * Command injection.
- * SQL injection.
- * Memory-based exploits.
- * Protocol evasion techniques.

This functionality lowers the risk of exploitation by actively blocking attack attempts based on their behavior, even when a signature is not yet available. This approach makes ATP the most valuable solution for addressing new and actively exploited vulnerabilities.

* Why not "Advanced URL Filtering uses machine learning (ML) to learn which malicious URLs are being utilized by the attackers, then block the resulting traffic" (Option A)? While Advanced URL Filtering is highly effective at blocking access to malicious websites, it does not provide the inline analysis necessary to prevent direct exploitation of vulnerabilities. Exploitation often happens within the application or protocol layer, which Advanced URL Filtering does not inspect.

* Why not "Single Pass Architecture and parallel processing ensure traffic is efficiently scanned against any enabled Cloud-Delivered Security Services (CDSS) subscription" (Option C)? Single Pass Architecture improves performance by ensuring all enabled services (like Threat Prevention, URL Filtering, etc.) process traffic efficiently. However, it is not a feature that directly addresses vulnerability exploitation or zero-day attack detection.

* Why not "WildFire loads custom OS images to ensure that the sandboxing catches any activity that would affect the customer's

environment" (Option D)? WildFire is a sandboxing solution designed to detect malicious files and executables. While it is useful for analyzing malware, it does not provide inline protection against exploitation of newly announced vulnerabilities, especially those targeting network protocols or applications.

Reference: Palo Alto Networks Advanced Threat Prevention specifically highlights its capability to detect and block zero-day exploits, leveraging inline deep learning and machine learning models. This makes it the optimal solution for protecting against new vulnerabilities being actively exploited.

NEW QUESTION # 56

Which two actions can a systems engineer take to discover how Palo Alto Networks can bring value to a customer's business when they show interest in adopting Zero Trust? (Choose two.)

- A. Ask the customer about their internal business flows, such as how their users interact with applications and data across the infrastructure.
- B. Ask the customer about their approach to Zero Trust, explaining that it is a strategy more than it is something they purchase.
- C. Explain how Palo Alto Networks can place virtual NGFWs across the customer's network to ensure assets and traffic are seen and controlled.
- D. Use the Zero Trust Roadshow package to demonstrate to the customer how robust Palo Alto Networks capabilities are in meeting Zero Trust.

Answer: A,B

Explanation:

To help a customer understand how Palo Alto Networks can bring value when adopting a Zero Trust architecture, the systems engineer must focus on understanding the customer's specific needs and explaining how the Zero Trust strategy aligns with their business goals. Here's the detailed analysis of each option:

* Option A: Ask the customer about their internal business flows, such as how their users interact with applications and data across the infrastructure

* Understanding the customer's internal workflows and how their users interact with applications and data is a critical first step in Zero Trust. This information allows the systems engineer to identify potential security gaps and suggest tailored solutions.

* This is correct.

* Option B: Explain how Palo Alto Networks can place virtual NGFWs across the customer's network to ensure assets and traffic are seen and controlled

* While placing NGFWs across the customer's network may be part of the implementation, this approach focuses on the product rather than the customer's strategy. Zero Trust is more about policies and architecture than specific product placement.

* This is incorrect.

* Option C: Use the Zero Trust Roadshow package to demonstrate to the customer how robust Palo Alto Networks capabilities are in meeting Zero Trust

* While demonstrating capabilities is valuable during the later stages of engagement, the initial focus should be on understanding the customer's business requirements rather than showcasing products.

* This is incorrect.

* Option D: Ask the customer about their approach to Zero Trust, explaining that it is a strategy more than it is something they purchase

* Zero Trust is not a product but a strategy that requires a shift in mindset. By discussing their approach, the systems engineer can identify whether the customer understands Zero Trust principles and guide them accordingly.

* This is correct.

References:

* Palo Alto Networks documentation on Zero Trust

* Zero Trust Architecture Principles in NIST 800-207

NEW QUESTION # 57

Which two tools should a systems engineer use to showcase the benefit of an evaluation that a customer has just concluded?

- A. Firewall Sizing Guide
- B. Golden Images
- C. Security Lifecycle Review (SLR)
- D. Best Practice Assessment (BPA)

Answer: C,D

Explanation:

After a customer has concluded an evaluation of Palo Alto Networks solutions, it is critical to provide a detailed analysis of the results and benefits gained during the evaluation. The following two tools are most appropriate:

* Why "Best Practice Assessment (BPA)" (Correct Answer A)? The BPA evaluates the customer's firewall configuration against Palo Alto Networks' recommended best practices. It highlights areas where the configuration could be improved to strengthen security posture. This is an excellent tool to showcase how adopting Palo Alto Networks' best practices aligns with industry standards and improves security performance.

* Why "Security Lifecycle Review (SLR)" (Correct Answer B)? The SLR provides insights into the customer's security environment based on data collected during the evaluation. It identifies vulnerabilities, risks, and malicious activities observed in the network and demonstrates how Palo Alto Networks' solutions can address these issues. SLR reports use clear visuals and metrics, making it easier to showcase the benefits of the evaluation.

* Why not "Firewall Sizing Guide" (Option C)? The Firewall Sizing Guide is a pre-sales tool used to recommend the appropriate firewall model based on the customer's network size, performance requirements, and other criteria. It is not relevant for showcasing the benefits of an evaluation.

* Why not "Golden Images" (Option D)? Golden Images refer to pre-configured templates for deploying firewalls in specific use cases. While useful for operational efficiency, they are not tools for demonstrating the outcomes or benefits of a customer evaluation. Reference: Palo Alto Networks documentation for Best Practice Assessment (BPA) and Security Lifecycle Review (SLR) confirms their role in showcasing evaluation benefits.

NEW QUESTION # 58

A prospective customer has provided specific requirements for an upcoming firewall purchase, including the need to process a minimum of 200,000 connections per second while maintaining at least 15 Gbps of throughput with App-ID and Threat Prevention enabled.

What should a systems engineer do to determine the most suitable firewall for the customer?

- **A. Download the firewall sizing tool from the Palo Alto Networks support portal.**
- B. Use the online product configurator tool provided on the Palo Alto Networks website.
- C. Upload 30 days of customer firewall traffic logs to the firewall calculator tool on the Palo Alto Networks support portal.
- D. Use the product selector tool available on the Palo Alto Networks website.

Answer: A

Explanation:

* Firewall Sizing Tool (Answer B):

* The firewall sizing tool is the most accurate way to determine the suitable firewall model based on specific customer requirements, such as throughput, connections per second, and enabled features like App-ID and Threat Prevention.

* By inputting traffic patterns, feature requirements, and performance needs, the sizing tool provides tailored recommendations.

* Why Not A:

* While uploading traffic logs to the calculator tool may help analyze traffic trends, it is not the primary method for determining firewall sizing.

* Why Not C or D:

* The product configurator tool and product selector tool are not designed for detailed performance analysis based on real-world requirements like connections per second or enabled features.

References from Palo Alto Networks Documentation:

* Firewall Sizing Guide

NEW QUESTION # 59

In which two locations can a Best Practice Assessment (BPA) report be generated for review by a customer? (Choose two.)

- A. AIOps
- **B. PANW Partner Portal**
- **C. Customer Support Portal**
- D. Strata Cloud Manager (SCM)

Answer: B,C

Explanation:

The Best Practice Assessment (BPA) report evaluates firewall and Panorama configurations against Palo Alto Networks' best practice recommendations. It provides actionable insights to improve the security posture of the deployment. BPA reports can be generated from the following locations:

* Why "PANW Partner Portal" (Correct Answer A)? Partners with access to the Palo Alto Networks Partner Portal can generate BPA reports for customers as part of their service offerings. This allows partners to assess and demonstrate compliance with best practices.

* Why "Customer Support Portal" (Correct Answer B)? Customers can log in to the Palo Alto Networks Customer Support Portal to generate their own BPA reports. This enables organizations to self-assess and improve their firewall configurations.

* Why not "AIOps" (Option C)? While AIOps provides operational insights and best practice recommendations, it does not generate full BPA reports. BPA and AIOps are distinct tools within the Palo Alto Networks ecosystem.

* Why not "Strata Cloud Manager (SCM)" (Option D)? Strata Cloud Manager is designed for managing multiple Palo Alto Networks cloud-delivered services and NGFWs but does not currently support generating BPA reports. BPA is limited to the Partner Portal and Customer Support Portal.

NEW QUESTION # 60

.....

Just like the old saying goes, motivation is what gets you started, and habit is what keeps you going. A good habit, especially a good study habit, will have an inestimable effect in help you gain the success. The PSE-Strata-Pro-24 Study Materials from our company will offer the help for you to develop your good study habits. If you buy and use our study materials, you will cultivate a good habit in study.
