최신 Advanced in AI Audit AAIA 무료 샘플문제 (Q132-Q137):

질문 # 132

An organization is adopting AI for its procurement and inventory teams, raising concern from stakeholders that they will lose their jobs due to AI. Which of the following is the BEST way for the IS auditor to assess whether the potential negative impacts were minimized?

- A. Review the AI roadmap for short-term and long-term milestones.
- B. Review the current state assessment of how AI may impact the organization.
- C. Review how the project management team collected feedback in engagement activities.
- **D. Review human-centered design practices to determine how they were considered.**

정답: D

설명:

Human-centered design (HCD) focuses on integrating stakeholder needs, ethical implications, and social impact into AI system development. The AAIA™ Study Guide emphasizes the role of HCD in minimizing negative workforce impacts and ensuring inclusive design.

"Auditors should review whether the AI system design process included human-centered practices- particularly for applications affecting jobs or critical human roles. HCD ensures responsible adoption." While feedback collection (C) and impact assessments (D) provide useful context, A directly addresses ethical impact mitigation at the design level.

질문 # 133

Which of the following should be done FIRST when developing an incident management process for AI threats?

- A. Configure SIEM for security alerts
- **B. Define clear roles and responsibilities**
- C. Establish incident classification procedures
- D. Develop incident escalation procedures

정답: B

설명:

The AAIA framework states that incident response begins with roles and responsibilities. Without clearly assigned accountability, no classification, escalation, or detection procedures can be effectively implemented.

Defining roles ensures:

- * Ownership of monitoring
- * Chain of command for incident decisions
- * Clear responsibility for documentation
- * Communication pathways
- * Allocation of resources for containment

Classification (A), escalation (D), and SIEM configuration (C) follow AFTER roles are assigned. Therefore, defining roles and responsibilities is foundational.

질문 # 134

An IS auditor detected a "Prompt Injection" embedded in an email from a vendor that used an invisible font to hide text. Which of

the following is the BEST control?

- A. Add more instructions to the AI model about ignoring invisible text.
- B. Lower the temperature so the AI model is less likely to follow injections.
- **C. Implement text sanitization that removes invisible text before ingestion.**
- D. Implement text sanitization that changes fonts to default.

정답: C

설명:

This is a "Hidden Text" attack, where an attacker tricks an LLM by embedding instructions that the human reader cannot see but the machine can process. The most effective "Incident Management" control is "Text Sanitization" that specifically strips out invisible formatting, hidden HTML tags, or zero-width characters before the text is sent to the AI. Adding instructions (Option B) is unreliable because prompt injections are specifically designed to "override" previous instructions. Lowering the temperature (Option A) reduces creativity but doesn't stop the model from following a clear, albeit hidden, command.

질문 # 135

An organization is evaluating change management practices for AI-based decision support models. Which of the following BEST demonstrates effective AI-focused change management?

- A. Assigning a single data science team member to adjust the model in order to establish accountability
- **B. Documenting model updates and retraining sessions to ensure traceability**
- C. Deploying two separate copies of the model after each adjustment to compare results
- D. Engaging an independent expert to review the model's accuracy and precision on a quarterly basis

정답: B

설명:

Documenting model updates and retraining sessions to ensure traceability (option C) is the hallmark of mature, audit-ready change management in AI. The AAIA™ Study Guide states, "Traceability and documentation of all changes-including retraining events, parameter adjustments, and update rationales- enable effective audit trails, accountability, and regulatory compliance for AI systems." While reviews and comparisons are useful, only comprehensive documentation guarantees ongoing transparency and effective management.

질문 # 136

Which of the following is MOST important to review in order to gain assurance that an AI model is performing without biases?

- A. AI model temperature
- B. AI model adaptability
- C. AI development environment
- **D. AI training data**

정답: D
