Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q294-Q299):

NEW QUESTION # 294

Refer to the exhibit.

What is the outcome of this command when the EPLD is updated on a Cisco Nexus 9000 series switch?

- A. displays the compatibility of the EPLD upgrade and the image in the bootflash
- B. upgrades the EPLD on the switch disruptively
- C. shows a simulated upgrade of the EPLD
- D. displays the impact of the upgrade on the operation of the switch

Answer: A

NEW QUESTION # 295

Which set of actions must be taken to backup service profiles, MAC pools, and VLANs and transfer the back up file to the external server using authentication?

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: D

NEW QUESTION # 296

Refer to the exhibit. An engineer must implement VXLAN with anycast gateway. To accomplish this, an engineer must set up PIM Source-Specific Multicast for host reachability. Which IP address must be applied to interface loopback1 to accomplish this goal?

- A. 10.10.0.2/32
- B. 10.10.0.1/32
- C. 255.0.0.1/8
- D. 255.0.100

Answer: D

NEW QUESTION # 297

Refer to the exhibit.

Refer to the exhibit. Which feature set must be used to configure on switch 2 to establish a VSAN trunk between switch 1 and switch 2?

- A. Option A
- B. Option D
- C. Option B
- D. Option C

Answer: A

NEW QUESTION # 298

A storage administrator notices an increasing number of storage targets that unexpectedly reach capacity, causing periodic service interruptions. The administrator must now create and submit a daily report of the environment that shows the status of the storage targets with the highest capacities. Which solution provides this information?

- A. Cisco Intersight with Slow Drain Analysis
- B. Cisco DCNM with SAN Insight
- C. Nagios Core with OpManager
- D. SolarWinds with Slow Drain Analysis

Answer: B

Explanation:

Cisco DCNM with SAN Insight is the solution that provides detailed information on the status of storage targets, including capacity metrics. SAN Insight is a feature within Cisco DCNM that allows storage administrators to monitor and analyze storage network traffic, helping to identify and resolve issues such as unexpected capacity limits. It would be the appropriate tool for creating and submitting a daily report of the environment showing the status of storage targets with the highest capacities.
