Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41

To complete their day-to-day operations, remote users require access to a TCP-based application that is hosted on a private web server. Which FortiSASE deployment use case provides the most efficient and secure method for meeting the remote users' requirements?

- A. next generation firewall (NGFW)
- B. SD-WAN private access
- C. zero trust network access (ZTNA) private access
- D. inline-CASB

Answer: C

Explanation:

ZTNA ensures that remote users can securely connect to private applications based on identity verification and security policies, without needing a traditional VPN. This access method provides strong security with least-privilege access, which is ideal for protecting private web servers and their data from unauthorized access. It also improves efficiency by dynamically verifying user identity and device posture before granting access.

NEW QUESTION # 42

What is the benefit of SD-WAN on-ramp deployment with FortiSASE?

- A. To secure internet traffic for branch users
- B. To manage branch location endpoints
- C. To provide access to private applications using the bookmark portal
- D. To provide device compliance checks using ZTNA tags

Answer: A

Explanation:

SD-WAN on-ramp with FortiSASE directs branch user internet traffic to the FortiSASE cloud for consistent security enforcement and protection, regardless of the branch location.

NEW QUESTION # 43

Your FortiSASE customer has a small branch office in which ten users will be using their personal laptops and mobile devices to access the internet.

Which deployment should they use to secure their internet access with minimal configuration?

- A. Deploy FortiGate as a LAN extension to secure internet access.
- B. Deploy SD-WAN on-ramp to secure internet access.
- C. Deploy FortiAP to secure internet access.
- D. Deploy FortiClient endpoint agent to secure internet access.

Answer: C

Explanation:

Deploying FortiAP enables secure internet access for unmanaged personal devices in small branch offices with minimal configuration by automatically directing traffic through FortiSASE, eliminating the need for endpoint installation or complex setup.

NEW QUESTION # 44

Which secure internet access (SIA) use case minimizes individual endpoint configuration?

- A. Agentless remote user internet access
- **B. Site-based remote user internet access**
- C. SIA for FortiClient agent remote users
- D. SIA using ZTNA

Answer: B

Explanation:

Site-based remote user internet access minimizes individual endpoint configuration by routing user traffic through a centralized FortiSASE connection point (such as a FortiAP or FortiGate), rather than requiring each device to be individually configured with the FortiClient agent.

NEW QUESTION # 45

Which description of the FortiSASE inline-CASB component is true?

- **A. It detects data in motion.**
- B. It relies on API to integrate with cloud services.
- C. It is placed outside the traffic path.
- D. It has limited visibility when data is transmitted.

Answer: A

Explanation:

FortiSASE inline-CASB operates in the traffic path to provide real-time visibility and control over data in motion as it is transmitted to and from cloud applications.

NEW QUESTION # 46
