100% Pass Quiz 2026 Efficient Dynatrace-Associate: Dynatrace Associate Certification Exam Dump Check

So many of our worthy customers have achieved success not only on the career but also on the life style due to the help of our Dynatrace-Associate study guide. You can also join them and learn our Dynatrace-Associate learning materials. You will gradually find your positive changes after a period of practices. Then you will finish all your tasks excellently. You will become the lucky guys if there has a chance. Our Dynatrace-Associate Exam Braindumps are waiting for you to have a try.

Dynatrace Associate Certification Exam Sample Questions (Q64-Q69):

NEW QUESTION # 64

A problem opened with the event category of "Slowdown". Assuming Dynatrace is using the default anomaly detection settings, what entity types can be the root cause of this problem? (Select all that apply)

- A. Hosts
- B. Cloud Providers
- C. Processes
- D. Services
- E. Applications

Answer: A,C,D

Explanation:

In Dynatrace, "Slowdown" problems are typically triggered by performance degradation detected through anomaly detection on monitored entities.

With default settings, the root cause of slowdown problems is usually identified at:

Services, where response time degradation is detected

Processes, where CPU, memory, or other resource bottlenecks occur

Hosts, where infrastructure-level issues impact performance

Applications are higher-level aggregations and are not typically identified as the root cause entity.

Cloud Providers are not treated as root cause entities in anomaly detection.

Dynatrace's AI (Davis) correlates these entities to pinpoint the most likely root cause in the topology.

Reference: Based on official Dynatrace University training materials covering problem detection and Davis AI root cause analysis.

NEW QUESTION # 65

Which Dynatrace capability can be used to query ingested log data?

- A. SQL
- B. USQL
- C. JavaScript
- **D. DQL**

Answer: D

Explanation:

DQL (Dynatrace Query Language) is the primary language used to query ingested data in Dynatrace, including logs.

It enables:

- * Advanced filtering and aggregation
- * Correlation across logs, metrics, and traces
- * Flexible data analysis within Grail

Other options:

- * USQL is legacy
- * SQL is not used
- * JavaScript is not a query language in Dynatrace

Reference: Based on official Dynatrace University training materials on Grail and DQL.

NEW QUESTION # 66

Which of the following Synthetics simulate a user performing multiple actions across your website(s)?

- A. Single URL browser monitors
- B. HTTP monitor
- **C. Browser clickpaths**
- D. Ping test

Answer: C

Explanation:

Browser clickpaths simulate full user journeys across multiple steps in a web application.

They:

- * Perform multiple actions (clicks, navigation, form submissions)
- * Simulate real user workflows
- * Validate end-to-end functionality

Other options:

- * HTTP monitor = single request
- * Single URL browser monitor = single page load
- * Ping test = network check only

Reference: Based on official Dynatrace University training materials on Synthetic Monitoring.

NEW QUESTION # 67

What sort of outage occurs when all Synthetic Locations simultaneously experience 1-5 consecutive failures?

- A. Private Synthetics
- **B. Global outage**
- C. Public Synthetics
- D. Local outage

Answer: B

Explanation:

A Global outage is detected when all configured Synthetic locations report failures at the same time within a defined number of consecutive failed executions. This indicates that the issue is not location-specific but instead affects the application or service globally.

Dynatrace Synthetic Monitoring differentiates between:

- * Local outages, where only a subset of locations fail (indicating regional or network-specific issues)

* Global outages , where all locations fail simultaneously, indicating a widespread availability problem Options such as Public Synthetics and Private Synthetics refer to types of Synthetic locations, not outage classifications.
Reference: Based on official Dynatrace University training materials covering Synthetic Monitoring and outage detection.

NEW QUESTION # 68

What kind of problems can appear in Dynatrace? (Select all that apply)

- A. Availability
- B. Slowdown
- C. Errors
- D. Resource
- E. Critical

Answer: A,B,C,D

Explanation:

Dynatrace categorizes problems based on the type of issue detected:

* Availability - when a service or application becomes unavailable

* Errors - when there is an increase in failure rate

* Slowdown - when response times degrade

* Resource - when infrastructure resources (CPU, memory, disk) are saturated Critical is not a problem type; it is a severity level used to indicate importance, not classification.

Reference: Based on official Dynatrace University training materials covering problem detection categories.

NEW QUESTION # 69

.....

Dynatrace Associate Certification Exam Exam Questions save your study time and help you prepare in less duration. We have hundreds of most probable questions which have a chance to appear in the real Dynatrace Associate Certification Exam exam. The Dynatrace Dynatrace-Associate exam questions are affordable and 365 days free updated, and you can use them without any guidance. However, in case of any trouble, our support team is always available to sort out the problems. We will provide you with the information covered in the current test and incorporate materials that originate from Dynatrace Dynatrace-Associate Exam Dumps.
