

ADA-C01 New Braindumps Files, ADA-C01 Instant Access

P.S. Free & New ADA-C01 dumps are available on Google Drive shared by Exams-boost: <https://drive.google.com/open?id=1Qrpk0OwEUQ23gGrKD1tYGrFBtnHXNTGK>

Exams-boost offers up to 1 year of free SnowPro Advanced Administrator (ADA-C01) exam questions updates. With our actual questions, you can prepare for the ADA-C01 exam without missing out on any point you need to know. These exam questions provide you with all the necessary knowledge that you will need to clear the SnowPro Advanced Administrator (ADA-C01) exam with a high passing score.

Snowflake ADA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	• Interpret and make recommendations for data clustering • Manage DML locking and concurrency in Snowflake
Topic 2	• Manage and implement data sharing • Given a set of business requirements, establish access control architecture
Topic 3	• Given a scenario, create and manage access control • Given a scenario, implement resource monitors
Topic 4	• Snowflake Security, Role-Based Access Control (RBAC), and User Administration • Disaster Recovery, Backup, and Data Replication

Free PDF Quiz Newest Snowflake - ADA-C01 New Braindumps Files

Knowledge of the ADA-C01 real study guide contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the ADA-C01 question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite ADA-C01 Exam Questions download. Users can not only learn new knowledge, can also apply theory into the ADA-C01 actual problem, so to grasp the opportunity!

Snowflake SnowPro Advanced Administrator Sample Questions (Q73-Q78):

NEW QUESTION # 73

An Administrator needs to implement an access control mechanism across an organization. The organization users access sensitive customer data that comes from different regions and needs to be accessible for Analysts who work in these regions. Some Analysts need very specific access control depending on their functional roles in the organization. Following Snowflake recommended practice, how should these requirements be met? (Select TWO).

- A. Use a third-party tool to share the data.
- B. Include masking rules as part of data ingestion and transformation pipelines.
- C. Use zero-copy cloning to replicate the database schema and provide access as needed.
- D. Implement row access policies and Dynamic Data Masking policies.
- E. Implement views on top of base tables that exclude or mask sensitive data.

Answer: D,E

NEW QUESTION # 74

Which actions are considered breaking changes to data that is shared with consumers in the Snowflake Marketplace? (Select TWO).

- A. Unpublishing the data listing
- B. Renaming a table
- C. Adding region availability to the listing
- D. Dropping a column from a table
- E. Deleting data from a table

Answer: B,D

Explanation:

Explanation

According to the Snowflake documentation¹, breaking changes are changes that affect the schema or structure of the shared data, such as dropping or renaming a column or a table. These changes may cause errors or unexpected results for the consumers who query the shared data. Deleting data from a table, unpublishing the data listing, or adding region availability to the listing are not breaking changes, as they do not alter the schema or structure of the shared data.

1: Managing Data Listings in Snowflake Data Marketplace | Snowflake Documentation

NEW QUESTION # 75

What role or roles should be used to properly create the object required to setup OAuth 2.0 integration?

- A. ACCOUNTADMIN and SYSADMIN
- B. Any role with GRANT USAGE on SECURITY INTEGRATION
- C. ACCOUNTADMIN and SECURITYADMIN
- D. ACCOUNTADMIN only

Answer: D

Explanation:

Explanation

According to the Using OAuth 2.0 with Snowflake - Blog, only the ACCOUNTADMIN role can create and manage integrations, so an administrator must assume that role when creating a security integration for OAuth.

The other roles do not have the necessary privileges to create the object required to setup OAuth 2.0 integration.

NEW QUESTION # 76

If the query matches the definition, will Snowflake always dynamically rewrite the query to use a materialized view?

- A. No, because joins are not supported by materialized views.
- **B. No, because the optimizer might decide against it.**
- C. Yes, because materialized views are always faster.
- D. No, because the materialized view may not be up-to-date.

Answer: B

Explanation:

Explanation

Snowflake's query optimizer can automatically rewrite queries against the base table or regular views to use the materialized view instead, if the query matches the definition of the materialized view¹. However, this is not always guaranteed, as the optimizer might decide against using the materialized view based on various factors, such as the freshness of the data, the size of the result set, the complexity of the query, and the availability of the materialized view². Therefore, the answer is no, because the optimizer might decide against it.

NEW QUESTION # 77

A virtual warehouse report_wh is configured with AUTO_RESUME=TRUE and AUTO_SUSPEND=300. A user has been granted the role accountant.

An application with the accountant role should use this warehouse to run financial reports, and should keep track of compute credits used by the warehouse.

What minimal privileges on the warehouse should be granted to the role to meet the requirements for the application? (Select TWO).

- A. MODIFY
- B. OWNERSHIP
- **C. MONITOR**
- **D. USAGE**
- E. OPERATE

Answer: C,D

Explanation:

According to the Snowflake documentation¹, the MONITOR privilege on a warehouse grants the ability to view the warehouse usage and performance metrics, such as the number of credits consumed, the average and maximum run time, and the number of queries executed. The USAGE privilege on a warehouse grants the ability to use the warehouse to execute queries and load data. Therefore, the minimal privileges on the warehouse that should be granted to the role to meet the requirements for the application are MONITOR and USAGE. Option A is incorrect because the OPERATE privilege on a warehouse grants the ability to start, stop, resume, and suspend the warehouse, which is not required for the application. Option B is incorrect because the MODIFY privilege on a warehouse grants the ability to alter the warehouse properties, such as the size, auto-suspend, and auto-resume settings, which is not required for the application. Option E is incorrect because the OWNERSHIP privilege on a warehouse grants the ability to drop the warehouse, grant or revoke privileges on the warehouse, and transfer the ownership to another role, which is not required for the application.

NEW QUESTION # 78

.....

As the saying goes, to develop study interest requires to giving learner a good key for study, this is promoting learner active development of internal factors. The most function of our ADA-C01 question torrent is to help our customers develop a good study habits, cultivate interest in learning and make them pass their exam easily and get their ADA-C01 Certification. All workers of our company are working together, in order to produce a high-quality product for candidates.
