Free PDF 2025 Snowflake The Best ADA-C01 Study Center

It is known to us that more and more companies start to pay high attention to the ADA-C01 certification of the candidates. Because these leaders of company have difficulty in having a deep understanding of these candidates, may it is the best and fast way for all leaders to choose the excellent workers for their company by the ADA-C01 Certification that the candidates have gained. More and more workers have to spend a lot of time on meeting the challenge of gaining the ADA-C01 certification by sitting for an exam.

Snowflake SnowPro Advanced Administrator Sample Questions (Q17-Q22):

NEW QUESTION # 17

Which masking policy will mask a column whenever it is queried through a view owned by a role named MASKED_VIEW_ROLE?

- A. create or replace masking policy maskString as (val string) returns string -> case when array_contains ('MASKED_VIEW_ROLE' :: variant, parse_json (current_available_roles ())) then '*' else val end;

- ```

** '
• B. create or replace masking policy maskstring as (val string) returns string -> case when invoker_role() in ('MASKED_VIEW_ROLE') then else val end;
' **
• C. create or replace masking policy maskString as (val string) returns string -> case when current_role() in ('MASKED_VIEW_ROLE') then '*****' else val end;
• D. create or replace masking policy maskstring as (val string) returns string -> case when is_role_in_session ('MASKED_VIEW_ROLE') then ' ** else val end;
*,

```

**Answer: D**

Explanation:

A masking policy is a SQL expression that transforms the data in a column based on the role that queries the column<sup>1</sup>. The `is_role_in_session` function returns true if the specified role is in the current session<sup>2</sup>. Therefore, the masking policy in option A will mask the column data with asterisks whenever it is queried through a view owned by the `MASKED_VIEW_ROLE`<sup>3</sup>. The other options use different functions that do not check the ownership of the view, but rather the current role, the invoker role, or the available roles in the session<sup>4,5</sup>. These functions may not return the desired result if the role that owns the view is different from the role that queries the view.

### NEW QUESTION # 18

A team is provisioning new lower environments from the production database using cloning. All production objects and references reside in the database, and do not have external references.

What set of object references needs to be re-pointed before granting access for usage?

- A. Sequences, views, and secure views
- B. Sequences, views, secure views, and materialized views
- C. Sequences, storage integrations, views, secure views, and materialized views
- D. There are no object references that need to be re-pointed

**Answer: C**

Explanation:

According to the Snowflake documentation<sup>1</sup>, when an object in a schema is cloned, any future grants defined for this object type in the schema are applied to the cloned object unless the `COPY GRANTS` option is specified in the `CREATE` statement for the clone operation. However, some objects may still reference the source object or external objects after cloning, which may cause issues with access or functionality. These objects include:

\* Sequences: If a table column references a sequence that generates default values, the cloned table may reference the source or cloned sequence, depending on where the sequence is defined. To avoid conflicts, the sequence reference should be re-pointed to the desired sequence using the `ALTER TABLE` command<sup>2</sup>.

\* Storage integrations: If a stage or a table references a storage integration, the cloned object may still reference the source storage integration, which may not be accessible or valid in the new environment. To avoid errors, the storage integration reference should be re-pointed to the desired storage integration using the `ALTER STAGE` or `ALTER TABLE` command<sup>3,4</sup>.

\* Views, secure views, and materialized views: If a view references another view or table, the cloned view may still reference the source object, which may not be accessible or valid in the new environment. To avoid errors, the view reference should be re-pointed to the desired object using the `CREATE OR REPLACE VIEW` command<sup>5</sup>.

1: Cloning Considerations | Snowflake Documentation 2: [ALTER TABLE | Snowflake Documentation] 3: [ALTER STAGE | Snowflake Documentation] 4: [ALTER TABLE | Snowflake Documentation] 5: [CREATE VIEW | Snowflake Documentation]

### NEW QUESTION # 19

How should an Administrator configure a Snowflake account to use AWS PrivateLink?

- A. Create CNAME records in the DNS.
- B. Use SnowCD to evaluate the network connection.
- C. Block public access to Snowflake.
- D. Contact Snowflake Support.

**Answer: A**

Explanation:

To configure a Snowflake account to use AWS PrivateLink, the Administrator needs to create CNAME records in the DNS that point to the private endpoints provided by Snowflake. This allows the clients to connect to Snowflake using the same URL as before, but with private connectivity. According to the Snowflake documentation, "After you have created the VPC endpoints, Snowflake provides you with a list of private endpoints for your account. You must create CNAME records in your DNS that point to these private endpoints. The CNAME records must use the same hostnames as the original Snowflake URLs for your account." The other options are either incorrect or not sufficient to configure AWS PrivateLink. Option B is not necessary, as the Administrator can enable AWS PrivateLink using the `SYSTEM$AUTHORIZE_PRIVATELINK` function<sup>1</sup>. Option C is not recommended, as it may prevent some data traffic from reaching Snowflake, such as large result sets stored on AWS S3<sup>2</sup>. Option D is not related to AWS PrivateLink, but to Snowflake Connectivity Diagnostic (SnowCD), which is a tool for diagnosing network issues between clients and Snowflake<sup>3</sup>.

### NEW QUESTION # 20

A team of developers created a new schema for a new project. The developers are assigned the role `DEV_TEAM` which was set up using the following statements:

```
USE ROLE SECURITYADMIN;
```

```
CREATE ROLE DEV_TEAM;
```

```
GRANT USAGE, CREATE SCHEMA ON DATABASE DEV_DB01 TO ROLE DEV_TEAM;
```

```
GRANT USAGE ON WAREHOUSE DEV_WH TO ROLE DEV_TEAM;
```

Each team member's access is set up using the following statements:

```
USE ROLE SECURITYADMIN;
```

```
CREATE ROLE JDOE_PROFILE;
```

```
CREATE USER JDOE LOGIN NAME = 'JDOE' DEFAULT_ROLE='JDOE_PROFILE';
```

```
GRANT ROLE JDOE_PROFILE TO USER JDOE;
```

```
GRANT ROLE DEV_TEAM TO ROLE JDOE_PROFILE;
```

New tables created by any of the developers are not accessible by the team as a whole.

How can an Administrator address this problem?

- A. Assign ownership privilege to `DEV_TEAM` on the newly-created schema.
- **B. Set up future grants on the newly-created schemas.**
- C. Set up the new schema as a managed-access schema.
- D. Assign usage privilege on the virtual warehouse `DEV_WH` to the role `JDOE_PROFILE`.

**Answer: B**

Explanation:

According to the Snowflake documentation<sup>1</sup>, future grants are a way to automatically grant privileges on future objects of a specific type that are created in a database or schema. By setting up future grants on the newly-created schemas, the administrator can ensure that any tables created by the developers in those schemas will be accessible by the `DEV_TEAM` role, without having to grant privileges on each table individually. Option A is incorrect because assigning ownership privilege to `DEV_TEAM` on the newly-created schema does not grant privileges on the tables in the schema, only on the schema itself. Option B is incorrect because assigning usage privilege on the virtual warehouse `DEV_WH` to the role `JDOE_PROFILE` does not affect the access to the tables in the schemas, only the ability to use the warehouse. Option D is incorrect because setting up the new schema as a managed-access schema does not grant privileges on the tables in the schema, but rather requires explicit grants for each table.

### NEW QUESTION # 21

Which type of listing in the Snowflake Marketplace can be added and queried immediately?

- A. Monetized listing
- **B. Standard listing**
- C. Personalized listing
- D. Regional listing

**Answer: B**

Explanation:

According to the Snowflake documentation<sup>1</sup>, a standard listing is a type of listing that provides free access to the full data product, with no payment required. A standard listing can be added and queried immediately by the consumer, as long as they accept the terms and conditions of the listing. A monetized listing is a type of listing that charges for access to the data product, using the pricing

models offered by Snowflake. A monetized listing requires the consumer to provide payment information and agree to the billing terms before accessing the data product. A regional listing is not a type of listing, but a way to specify the regions where the listing is available. A personalized listing is a type of listing that provides limited trial access to the data product, with unlimited access to the full data product available upon request. A personalized listing requires the consumer to request access from the provider and wait for the provider to grant access before accessing the data product. Therefore, the only type of listing that can be added and queried immediately is the standard listing.

## NEW QUESTION # 22

.....

With our ADA-C01 test prep, you don't have to worry about the complexity and tediousness of the operation. As long as you enter the learning interface of our soft test engine of ADA-C01 quiz guide and start practicing on our Windows software, you will find that there are many small buttons that are designed to better assist you in your learning. When you want to correct the answer after you finish learning, the correct answer for our ADA-C01 test prep is below each question, and you can correct it based on the answer. In addition, we design small buttons, which can also show or hide the ADA-C01 Exam Torrent, and you can flexibly and freely choose these two modes according to your habit. In short, you will find the convenience and practicality of our ADA-C01 quiz guide in the process of learning. We will also continue to innovate and improve functions to provide you with better services.
