

ADA-C01 Valid Test Question, ADA-C01 Latest Real Exam

BONUS!!! Download part of PDFDumps ADA-C01 dumps for free: https://drive.google.com/open?id=1m4aZzmswacJCWz_OQntJDrliNTv1ACAY

If you are unfamiliar with our ADA-C01 practice materials, please download the free demos for your reference, and to some unlearned exam candidates, you can master necessities by our ADA-C01 training prep quickly. Our passing rate of the ADA-C01 Study Guide has reached up to 98 to 100 percent up to now, so you cannot miss this opportunity. And you will feel grateful if you choose our ADA-C01 exam questions.

Snowflake ADA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	• Manage and implement data sharing • Given a set of business requirements, establish access control architecture
Topic 2	• Implement and manage data governance in Snowflake • Data Sharing, Data Exchange, and Snowflake Marketplace
Topic 3	• Given a scenario, manage databases, tables, and views • Manage organizations and access control
Topic 4	• Set up and manage network and private connectivity • Given a scenario, manage Snowflake Time Travel and Fail-safe
Topic 5	• Snowflake Security, Role-Based Access Control (RBAC), and User Administration • Disaster Recovery, Backup, and Data Replication
Topic 6	• Given a scenario, configure access controls • Set up and manage security administration and authorization

Pass Snowflake ADA-C01 Certification with Ease Using PDFDumps Exam Questions

Our product provides the demo thus you can have a full understanding of our ADA-C01 prep torrent. You can visit the pages of the product and then know the version of the product, the characteristics and merits of the ADA-C01 test braindumps, the price of the product and the discount. There are also the introduction of the details and the guarantee of our ADA-C01 prep torrent for you to

read. You can also know how to contact us and what other client's evaluations about our ADA-C01 test brandumps. You will pass the ADA-C01 exam as our ADA-C01 study guide has a pass rate of 99% to 100%.

Snowflake SnowPro Advanced Administrator Sample Questions (Q22-Q27):

NEW QUESTION # 22

A requirement has been identified to allow members of a corporate Data Product team to bring in data sets from the Snowflake Marketplace. The members of this team use the role DP_TEAM.

What grant statements must the ACCOUNTADMIN execute in order for the DP TEAM role to import and work with data from the Marketplace?

- A. grant marketplace in account to role dp_team;
grant create database from share to role dp_team;
- B. grant imported privileges on account to role dp_team;
grant create database on account to role dp_team;
- C. grant import share on account to role dp_team;
grant create database on account to role dp_team;
- D. grant usage on snowflake_marketplace to role dp_team;
grant create database on account to role dp_team;

Answer: C

Explanation:

Option D is the correct answer because it follows the steps described in the Snowflake documentation for importing data from the Snowflake Marketplace. The ACCOUNTADMIN role needs to grant the IMPORT SHARE privilege on the account to the DP_TEAM role, which allows the role to import data from any provider in the marketplace. The ACCOUNTADMIN role also needs to grant the CREATE DATABASE privilege on the account to the DP_TEAM role, which allows the role to create a database from a share. Option A is incorrect because there is no MARKETPLACE privilege in Snowflake. Option B is incorrect because the USAGE privilege on SNOWFLAKE_MARKETPLACE is not sufficient to import data from the marketplace. Option C is incorrect because there is no IMPORTED PRIVILEGES privilege in Snowflake.

NEW QUESTION # 23

A Snowflake Administrator needs to persist all virtual warehouse configurations for auditing and backups.

Given a table already exists with the following schema:

Table Name:VWH_META

Column 1:SNAPSHOT_TIME TIMESTAMP_NTZ

Column 2:CONFIG VARIANT

Which commands should be executed to persist the warehouse data at the time of execution in JSON format in the table VWH_META?

- A. 1. SHOW WAREHOUSES;
2. INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP (),
OBJECT CONSTRUCT (*)
FROM TABLE (RESULT_SCAN (LAST_QUERY_ID ()));
- B. 1. SHOW WAREHOUSES;
2. INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP (),
FROM TABLE (RESULT_SCAN (LAST_QUERY_ID(1))) ;
- C. 1. SHOW WAREHOUSES;
2. INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP (), *
FROM TABLE (RESULT_SCAN (SELECT
LAST_QUERY ID(-1)));
- D. 1. SHOW WAREHOUSES;
2. INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP (), *
FROM TABLE (RESULT_SCAN (LAST_QUERY_ID ())) ;

Answer: A

Explanation:

Explanation

According to the Using Persisted Query Results documentation, the RESULT_SCAN function allows you to query the result set of a previous command as if it were a table. The LAST_QUERY_ID function returns the query ID of the most recent statement executed in the current session. Therefore, the combination of these two functions can be used to access the output of the SHOW WAREHOUSES command, which returns the configurations of all the virtual warehouses in the account. However, to persist the warehouse data in JSON format in the table VWH_META, the OBJECT_CONSTRUCT function is needed to convert the output of the SHOW WAREHOUSES command into a VARIANT column. The OBJECT_CONSTRUCT function takes a list of key-value pairs and returns a single JSON object. Therefore, the correct commands to execute are:

1.SHOW WAREHOUSES;

2.INSERT INTO VWH_META SELECT CURRENT_TIMESTAMP (), OBJECT_CONSTRUCT (*) FROM TABLE (RESULT_SCAN (LAST_QUERY_ID ())); The other options are incorrect because:

*A. This option does not use the OBJECT_CONSTRUCT function, so it will not persist the warehouse data in JSON format. Also, it is missing the * symbol in the SELECT clause, so it will not select any columns from the result set of the SHOW WAREHOUSES command.

*B. This option does not use the OBJECT_CONSTRUCT function, so it will not persist the warehouse data in JSON format. It will also try to insert multiple columns into a single VARIANT column, which will cause a type mismatch error.

*D. This option does not use the OBJECT_CONSTRUCT function, so it will not persist the warehouse data in JSON format. It will also try to use the RESULT_SCAN function on a subquery, which is not supported. The RESULT_SCAN function can only be used on a query ID or a table name.

NEW QUESTION # 24

What are benefits of using Snowflake organizations? (Select TWO).

- A. Administrators can change Snowflake account editions on-demand based on need.
- B. User administration is simplified across all accounts within the organization.
- C. Administrators can monitor and understand usage across all accounts in the organization.
- D. Administrators have the ability to create accounts in any available cloud provider or region.
- E. Administrators can simplify data movement across all accounts within the organization.

Answer: C,D

Explanation:

According to the Snowflake documentation¹, organizations are a feature that allows linking the accounts owned by a business entity, simplifying account management and billing, replication and failover, data sharing, and other account administration tasks. Some of the benefits of using organizations are:

* Administrators can monitor and understand usage across all accounts in the organization using the ORGANIZATION_USAGE schema, which provides historical usage data for all accounts in the organization via views in a shared database named SNOWFLAKE2. This can help to optimize costs and performance across the organization.

* Administrators have the ability to create accounts in any available cloud provider or region using the CREATE ACCOUNT command, which allows specifying the cloud platform and region for the new account³. This can help to meet the business needs and compliance requirements of the organization.

Option A is incorrect because administrators cannot change Snowflake account editions on-demand based on need, but rather have to contact Snowflake Support to request an edition change⁴. Option C is incorrect because administrators cannot simplify data movement across all accounts within the organization, but rather have to enable account database replication for both the source and target accounts, and use the ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command to promote a local database to serve as the primary database and enable replication to the target accounts⁵. Option D is incorrect because user administration is not simplified across all accounts within the organization, but rather requires creating and managing users, roles, and privileges for each account separately, unless using a federated authentication method such as SSO or SCIM.

NEW QUESTION # 25

Which tasks can be performed by the ORGADMIN role? (Select THREE).

- A. View usage information for all accounts in the organization.
- B. Create one or more accounts in the organization.
- C. Create secure views on application tables within the organization.
- D. Perform zero-copy cloning on account data.
- E. View a list of all regions enabled for the organization.

- F. Create a reader account to share data with another organization.

Answer: A,B,E

Explanation:

Explanation

A user with the ORGADMIN role can perform the following tasks1:

- *Create one or more accounts in the organization.
- *View a list of all regions enabled for the organization.
- *View usage information for all accounts in the organization.

Option C is incorrect because creating secure views on application tables is not a function of the ORGADMIN role, but rather a function of the roles that have access to the tables and schemas within the accounts. Option E is incorrect because performing zero-copy cloning on account data is not a function of the ORGADMIN role, but rather a function of the roles that have the CLONE privilege on the objects within the accounts. Option F is incorrect because creating a reader account to share data with another organization is not a function of the ORGADMIN role, but rather a function of the roles that have the CREATE SHARE privilege on the objects within the accounts.

NEW QUESTION # 26

Which command can temporarily disable Multi-factor Authentication (MFA) for the Snowflake username user1 for 24 hours?

- A. `alter user user1 set MINS_TO_BYPASS_MFA=1440;`
- B. `alter user user1 set DISABLE_MFA=1440;`
- C. `alter user user1 set TEMPORARY_MFA_BYPASS=1440;`
- D. `alter user user1 set HOURS_TO_BYPASS_MFA=24;`

Answer: A

Explanation:

Explanation

According to the Snowflake documentation¹, the MINS_TO_BYPASS_MFA property specifies the number of minutes to temporarily disable MFA for a user so that they can log in without the temporary token generated by the Duo Mobile application. After the time passes, MFA is enforced and the user cannot log in without the token. Therefore, to disable MFA for 24 hours, the value of this property should be set to 1440 minutes (24 x 60). Option B is incorrect because the DISABLE_MFA property is a boolean value that permanently disables MFA for a user, not a numeric value that specifies the duration. Option C is incorrect because there is no such property as TEMPORARY_MFA_BYPASS in Snowflake. Option D is incorrect because there is no such property as HOURS_TO_BYPASS_MFA in Snowflake.

NEW QUESTION # 27

.....

The Snowflake ADA-C01 certification exam offers a great opportunity to advance your career. With the SnowPro Advanced Administrator certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the SnowPro Advanced Administrator (ADA-C01) exam you can stand out in a crowded job market. The ADA-C01 certification exam shows that you have taken the time and effort to learn the necessary skills and have met the standards in the market.
