

H20-923_V1.0 Best Vce - H20-923_V1.0 Exam Preview

P.S. Free 2026 Huawei H20-923_V1.0 dumps are available on Google Drive shared by TestInsides:
https://drive.google.com/open?id=1Xv2vtDbq3vMKj_bi2WC9phpTvAiXvDT

I know your time is very valuable. We guarantee that you can download our products H20-923_V1.0 exam questions immediately after payment is successful. After your current page shows that the payment was successful, you can open your e-mail address to receive our H20-923_V1.0 Study Materials. And you can find that you can get H20-923_V1.0 learning guide only in 5 to 10 minutes. It is very fast and easy. And our H20-923_V1.0 practice engine is auto installed, so you don't have to do more work.

As the labor market becomes more competitive, a lot of people, of course including students, company employees, etc., and all want to get H20-923_V1.0 authentication in a very short time, this has developed into an inevitable trend. Each of them is eager to have a strong proof to highlight their abilities, so they have the opportunity to change their current status, including getting a better job, have higher pay, and get a higher quality of material, etc. It is not easy to qualify for a qualifying exam in such a short period of time. Our company's H20-923_V1.0 learning material is very good at helping customers pass the exam and obtain a certificate in a short time, and now I'm going to show you our H20-923_V1.0 Learning materials.

Useful Huawei - H20-923_V1.0 - HCSP-Field-Data Center Facility V1.0 Best Vce

The Huawei H20-923_V1.0 exam PDF is the collection of real, valid, and updated Huawei H20-923_V1.0 practice questions. The Huawei H20-923_V1.0 PDF dumps file works with all smart devices. You can use the H20-923_V1.0 PDF Questions on your tablet, smartphone, or laptop and start H20-923_V1.0 exam preparation anytime and anywhere.

Huawei HCSP-Field-Data Center Facility V1.0 Sample Questions (Q19-Q24):

NEW QUESTION # 19

In alarm management, the status can be identified by masking rules.

- A. Maintenance
- B. Valid
- C. Standard
- D. Invalid

Answer: A,D

Explanation:

In Huawei alarm management, masking rules are used to control how alarms are handled and displayed during specific conditions, such as planned maintenance, commissioning, device replacement, or known temporary abnormalities. When a masking rule is applied, the system can change how an alarm is classified so that O&M staff can distinguish between alarms that require immediate action and alarms that are expected or should be excluded from operational statistics. Two key statuses that masking rules can assign are Maintenance and Invalid. Maintenance indicates the alarm is generated during an approved maintenance activity (for example, power-off tests, sensor rewiring, cooling maintenance), so it is treated as expected and does not trigger normal escalation logic. Invalid indicates the alarm is not considered effective for operational follow-up—commonly used when a point is confirmed to be non-applicable, temporarily disabled, or its triggering condition is not meaningful to current operations. By contrast, Valid and Standard represent normal alarm handling states rather than outcomes specifically "identified by masking rules."

NEW QUESTION # 20

Which of the following are the user roles of Power Partner?

- A. DOC
- B. Inventory operations manager
- C. Service engineer
- D. Service manager of a rep office
- E. Project manager
- F. Startup engineer

Answer: A,B,C,D,E,F

NEW QUESTION # 21

During wizard startup, when you enter the screen for selecting commissioning items for the first time, all items are selected by default. Which item is mandatory. You can deselect other commissioning items that are not mandatory.

- A. Commissioning the indoor fans
- B. Commissioning the cooling system
- C. Commissioning the condensate pump
- D. Commissioning the humidifier

Answer: B

Explanation:

In Huawei precision cooling commissioning, the wizard groups functional commissioning items so technicians can validate key subsystems efficiently. The cooling system commissioning is mandatory because it verifies the primary control and protection loop that directly determines whether the unit can safely provide cooling capacity. This includes confirming the refrigeration or chilled-water cooling path can start and stop correctly, sensors and control logic are valid, and protection conditions (such as abnormal pressures /temperatures, flow conditions, or interlocks) behave as expected. Without completing cooling-system commissioning, the unit's core purpose—stable temperature control for IT loads—cannot be assured, and the controller cannot reliably judge normal versus fault states during operation.

Other items (indoor fans, condensate pump, humidifier) are important but scenario-dependent: some sites do not use humidification, some drainage designs do not require an internal condensate pump, and fan checks can be handled as part of broader functional tests or may vary by redundancy configuration. Therefore, the wizard allows non-mandatory items to be deselected, but the cooling system commissioning must remain selected to complete a valid baseline commissioning workflow.

NEW QUESTION # 22

During routine maintenance of the lithium battery cabinet, which of the following areas should be protected from electric shocks

caused by exposed hands or metal objects?

- A. Battery positive terminal
- B. Battery general negative terminal
- C. Battery negative terminal
- D. Short-circuit copper bar between battery modules
- E. Battery general positive terminal

Answer: A,B,C,D,E

Explanation:

In a lithium battery cabinet, any exposed conductive part that is electrically connected to the DC power path can present shock and arc risk, especially when technicians are using tools in a narrow space. The general positive/negative terminals are the cabinet-level high-energy connection points, and accidental contact or bridging with a metal object can cause severe DC arcing, burns, and equipment damage. The battery positive and negative terminals on individual modules are also hazardous because each module contributes to the total string voltage and fault current capability. In addition, the short-circuit copper bar between battery modules is a direct conductive link in the series/parallel connection; it can be energized and can create an instant short circuit if contacted by tools, jewelry, or loose hardware. Huawei maintenance safety practice therefore requires insulating covers, protective shields, and strict tool control to prevent exposed hands or metal objects from contacting any of these areas. Protecting all listed points reduces electric shock risk, prevents arc flash/arc burn incidents, and avoids unintended cabinet trips or permanent damage to terminals and busbars.

NEW QUESTION # 23

Operators can view parameters and set parameters on the "User Settings" and "Comm Settings" menus.

- A. False
- B. True

Answer: B

Explanation:

On Huawei data center cooling/monitoring controllers, menu permissions are typically organized so that routine O&M staff (operator role) can perform day-to-day adjustments that are required for normal running and integration, without accessing factory-only commissioning items. The User Settings menu is designed for operational configuration such as target temperature/humidity setpoints, control preferences, and other user-level parameters that need to be tuned to match the data hall environment and load changes. The Comm Settings menu is intended for communication configuration used in site integration, such as setting communication addresses, baud rates, protocol-related parameters, or enabling interfaces needed for upper-layer systems (for example, monitoring platforms). These settings are considered part of normal operation management and must be accessible so operators can maintain monitoring connectivity, replace controllers, or restore communication after changes. Higher-risk parameters (for example, factory calibration, protected control logic, or deep commissioning values) are normally restricted to higher privilege roles, but viewing and setting parameters within User Settings and Comm Settings is an operator-allowed function.

NEW QUESTION # 24

.....

Through our prior investigation and researching, our H20-923_V1.0 preparation exam can predicate the exam accurately. You will come across almost all similar questions in the real H20-923_V1.0 exam. Then the unfamiliar questions will never occur in the examination. Even the H20-923_V1.0 test syllabus is changing every year; our experts still have the ability to master the tendency of the important knowledge as they have been doing research in this career for years.
