CompTIA A+ Certification Exam: Core 1 Sample Questions (Q98-Q103):

NEW QUESTION # 98

A user is performing an ipconfig but does not see the expected IP address. The user wants to perform a release and renew of the IP to see if that will fix the issue. Which of the following is the user utilizing?

- A. DHCP
- B. DNS
- C. VLAN
- D. NAT

Answer: A

NEW QUESTION # 99

An insurance company wants to implement cloud computing and would like a cloud solution in which the infrastructure is shared with businesses in the same industry. Which of the following cloud models BEST addresses the company's need?

- A. Community
- B. Hybrid
- C. Public
- D. Private

Answer: A

Explanation:

Explanation

The cloud model that BEST addresses the company's need is the Community cloud model. A community cloud is a cloud infrastructure in which multiple organizations share resources and services based on common operational and regulatory requirements. The concept of a community cloud is akin to a community garden, where different individuals grow produce on a single piece of shared land

NEW QUESTION # 100

Which of the following display types is available for laptops?

- A. Plasma
- B. OLED
- C. CRT
- D. DLP

Answer: B

Explanation:

The correct answer is A. OLED.

OLED stands for Organic Light-emitting Diode, and it is one of the three display types available for laptops, along with TN (Twisted Nematic) and IPS (In-Plane Switching) panels¹. OLED displays use organic compounds that emit light when an electric current is applied, unlike LCD displays that use a backlight to illuminate the pixels. OLED displays have several advantages over LCD displays, such as higher contrast, wider viewing angles, faster response times, and lower power consumption². However, OLED displays are also more expensive, less common, and more prone to burn-in than LCD displays².

CRT (Cathode Ray Tube), DLP (Digital Light Processing), and Plasma are not display types for laptops. CRT is an old technology that uses a vacuum tube to project an image on a phosphor screen. CRT monitors are bulky, heavy, and consume a lot of power³. DLP is a technology that uses a digital micromirror device and a light source to project an image on a screen or a wall. DLP is mainly used for projectors, not laptops⁴. Plasma is a technology that uses gas-filled cells that emit light when an electric current is applied. Plasma displays are mainly used for large-screen TVs, not laptops.

NEW QUESTION # 101

A technician is troubleshooting a laptop that shuts down intermittently. When the laptop is repositioned, the technician notices a noise coming from inside of it. The technician removes the bottom cover. Which of the following should the technician do next?

- A. Remove the internal battery and look for loose parts.
- B. Inspect the connections for a damaged cable.
- **C. Turn on the laptop and move it again to replicate the issue.**
- D. Reseat the memory modules and the SSD.

Answer: C

Explanation:

The correct answer is A. Turn on the laptop and move it again to replicate the issue.

One of the basic troubleshooting techniques is to reproduce the problem and observe the symptoms. This can help to identify the cause and the solution of the issue. By turning on the laptop and moving it again, the technician can verify if the noise is related to the laptop's movement, and if it affects the laptop's performance or stability. The noise could indicate a loose or damaged component, such as a fan, a hard drive, or a cable, that needs to be fixed or replaced.

The other options are not the best next steps, because they do not confirm the source of the problem, and they may cause more damage or complications. Reseating the memory modules and the SSD (option B) may be helpful if the laptop has booting or performance issues, but it is unlikely to solve the noise problem.

Removing the internal battery and looking for loose parts (option C) may be risky if the technician does not follow proper safety precautions, such as disconnecting the power cord and wearing an anti-static wrist strap.

Inspecting the connections for a damaged cable (option D) may be part of the troubleshooting process, but it should be done after replicating the issue and narrowing down the possible causes.

NEW QUESTION # 102

Which of the following does a DHCP reservation MOST likely apply to?

- A. Mobile device
- **B. Printer**
- C. Smart TV
- D. Workstation

Answer: B

Explanation:

A DHCP reservation is a feature that allows a DHCP server to assign a specific IP address to a specific device on a network, based on its MAC address. This ensures that the device always receives the same IP address, even if it is disconnected or rebooted. A DHCP reservation is most likely applied to a printer, as it can make it easier for users to find and connect to the printer on the network, without having to change the printer settings or deal with IP address conflicts.
