

RCA Customizable Exam Mode - RCA Valid Exam Simulator

RCA Paper contains the following parts:

QUESTION TYPE	NO. OF Qs	Marks	Duration
MCOs	100	100	1hr
ESSAY	1	60	2hrs
INTERVIEW	vary	40	vary
TOTAL		200	3hrs* int.

MEDIUM: Hindi/English/Urdu

QUESTION PATTERN will be same as **UPSC PRELIMS**

IMPORTANT GUIDELINES

1. Exam Centers – Conducted in 10 cities: Delhi, Jammu, Srinagar, Lucknow, Guwahati, Malappuram, Bengaluru, Mumbai, Hyderabad, and Patna.

2. Exam Pattern – Two papers:

PAPER 1: **General Studies**
Objective Types Question (100 marks, 100 marks, 1 hr., negative marking of 1/3 for wrong answers)

- General Awareness
- Reasoning
- Comprehension
- Logical Thinking
- General Science

OMR sheets collected after 1 hour.

PAPER 2: Essay Writing

Subjective Types Question (1 essay, 60 marks, 2 hrs.)

You have to write 1 essay on the given topic. Topic level is the same as UPSC entrance exam. Each essay consists of 60 marks.

3. Evaluation Criteria:

Only the top **800 candidates (based on Paper 1)** will have their essays evaluated.

4. Interview/Personality Test: 40 marks.

In case of a tie, interview marks will be considered first, followed by age (younger candidate preferred).

4. Eligibility:

Candidates must have completed graduation and be eligible for UPSC CSE.

Those who have already availed RCA, JMI facilities for three years without appearing in a UPSC interview cannot apply.

5. Coaching Coverage: Includes General Studies, CSAT, and selected optional, Test Series, Answer Evaluation, and Essay Writing practice

Also conduct mock interviews for those who qualify mains round.

You can trust Lead2PassExam and download RCA exam questions to start preparation with complete peace of mind and satisfaction. The RCA exam questions have already helped countless Relativity RCA exam candidates. They got success in their dream RCA Certification Exam with flying colors. They did this with the help of real, valid, and updated RCA exam questions. You can also get success in the Relativity Certified Administrator certification exam with RCA exam questions.

You can try the free demo version of any Relativity RCA exam dumps format before buying. For your satisfaction, Lead2PassExam gives you a free demo download facility. You can test the features and then place an order. So, these real and updated Relativity dumps are essential to pass the RCA Exam on the first try.

Relativity Certified Administrator Exam Dumps Get Success With Minimal Effort

Choose RCA exam Topics Pdf to prepare for your coming test, and you will get unexpected results. RCA pdf version is very convenient to read and review. If you like to choose the paper file for study, the RCA pdf file will be your best choice. The Relativity RCA Pdf Dumps can be printed into papers, so that you can read and do marks as you like. Thus when you open your dumps, you will soon find the highlights in the RCA papers. What's more, the 99% pass rate can help you achieve your goals.

Relativity Certified Administrator Sample Questions (Q51-Q56):

NEW QUESTION # 51

What is the best way to convert an existing workspace in Relativity to a repository workspace?

- A. ARM the workspace out, then restore it as a repository workspace.
- B. Move the files to an existing repository workspace using Integration Points.
- C. Update the status field on the workspace object to say "Repository".
- **D. Install the Repository application to the workspace.**

Answer: D

Explanation:

The correct answer is D. Install the Repository application to the workspace. Relativity's official repository workspace documentation states that when installed to an existing workspace, the RelativityOne repository workspace application converts the workspace into a streamlined repository workspace for early case assessment and lower-cost storage of data not actively under review. The documentation also provides a dedicated section called Converting a review workspace to a repository workspace , where the conversion steps are simply to access the RelativityOne Repository Workspace application from the Application Library and install the application to the desired workspace .

This makes option D the exact documented conversion method. Option A describes moving data to another repository workspace, which is a different workflow and does not convert the existing workspace itself.

Option B involving ARM restore is used in some repository-related workflows, especially around templates or archived workspaces, but it is not the primary documented method for converting an existing workspace.

Option C is incorrect because repository mode is not enabled by editing a status field. Relativity also notes that if you convert an existing review workspace by installing the Repository application, the workspace remains classified for billing as a review workspace until the beginning of the next calendar month, which further confirms that application installation is the actual conversion mechanism.

NEW QUESTION # 52

What can you do using the basic imaging engine options?

- **A. Set the image size.**
- B. Set the print area on a spreadsheet.
- C. Set the maximum pages imaged per file.
- D. Set the orientation for presentation file types.

Answer: A

Explanation:

The correct answer is B. Set the image size. Relativity's Imaging Profiles documentation distinguishes between Basic Imaging Engine Options and Native Imaging Engine Options . Under the Basic Imaging Engine Options , Relativity explicitly lists Basic Image Size as a configurable setting, with options such as Original setting, Letter, A4, Legal, and Custom. That means image size is directly configurable when using the basic imaging engine.

The other options belong to the native imaging engine rather than the basic imaging engine. Maximum pages imaged per file is listed under Native Imaging Engine Options . Presentation orientation and spreadsheet print-area settings are also documented under native-file-specific options, not the basic engine. So, among the choices provided, the feature available through the basic imaging engine options is the ability to set the image size .

NEW QUESTION # 53

You need to create a saved search of all documents containing the term apple that do not contain the term magazine. What dtSearch string would successfully return these documents?

- A. Apple OR NOT magazine
- B. Apple NOT magazine
- C. NOT apple and magazine
- **D. NOT magazine AND apple**

Answer: D

Explanation:

The correct answer is A. NOT magazine AND apple . Relativity's dtSearch syntax documentation confirms that dtSearch supports

the Boolean operators AND, OR, and NOT and uses them to connect multiple terms in a single search expression. To return only documents that contain apple while excluding those that contain magazine, the query must require the presence of apple and exclude magazine in the same Boolean expression. Option A does exactly that.

Option B is not correct because Apple NOT magazine is missing the required Boolean connector before NOT

. Relativity's dtSearch guidance and related syntax behavior show that NOT is used as part of a Boolean expression, not as a standalone middle operator without AND or OR. Option C is incorrect because Apple OR NOT magazine would broaden the result set too much, potentially returning documents that do not contain apple at all. Option D is also incorrect because it excludes apple instead of requiring it. Therefore, the valid dtSearch string that successfully returns documents containing apple but not magazine is NOT magazine AND apple .

NEW QUESTION # 54

If you add the same document to two different data sources in the same production set, what happens when you stage the production?

- A. An error message is generated when you stage the production, and you cannot run the production until duplicate documents are removed.
- B. An error message is generated when you stage the production, and you can proceed to run the production.
- C. No error messages are generated when you stage the production, and the document is produced once according to the first data source settings.
- D. No error messages are generated when you stage the production, and the document is produced twice.

Answer: A

Explanation:

The correct answer is C . Relativity's official production staging documentation states that a staging error occurs when the same document is found in multiple data sources within the same production set. When this happens, Relativity generates an error message identifying the data sources that pulled back the same document and which specific document is duplicated. The documented resolution is to modify the saved searches used as data sources so they no longer return the same document.

This means staging does not simply ignore the duplicate, nor does it produce the document twice or proceed using the first data source's settings. The duplicate condition is treated as a production-stopping issue that must be corrected before the production can successfully continue. From an RCA perspective, this is a core Productions concept because it affects production QC and data-source design. Administrators should ensure that saved searches used as production data sources are mutually exclusive when necessary, especially if different branding, numbering, or production settings apply. During staging, Relativity is validating the integrity of the production inputs, and duplicate documents across data sources are explicitly flagged as errors. Therefore, the correct interpretation is that an error message appears during staging and the production cannot proceed until the duplicate documents are removed from overlapping data sources .

NEW QUESTION # 55

How can you modify a dtSearch index?

- A. The dtSearch index is automatically built upon import and is not customizable.
- B. Configure the index to be accent sensitive.
- C. Add a repeated content filter.
- D. Configure the index to translate search terms into multiple languages.

Answer: B

Explanation:

The correct answer is A. Configure the index to be accent sensitive. Relativity's official dtSearch index documentation lists Create accent sensitive as a configurable Yes/No setting on a dtSearch index. When enabled, the index becomes sensitive to accents and other language-specific characters. This is an example of a valid dtSearch index modification that an administrator can configure.

The other options are incorrect. Relativity does not document a dtSearch feature that translates search terms into multiple languages, so option B is not a valid dtSearch index modification. A repeated content filter is associated with Analytics workflows, not dtSearch index configuration, so option C is also wrong. Option D is clearly incorrect because dtSearch indexes are not simply automatic and fixed upon import; Relativity provides a dedicated dtSearch object with editable settings such as searchable set, sub-index sizing behavior, skip malicious files, and accent sensitivity.

From an RCA perspective, this matters because dtSearch is a configurable search technology in Relativity, and administrators are responsible for tuning it for the needs of a workspace. Accent sensitivity can materially affect search precision in multilingual or language-specific datasets. Therefore, the correct answer is A .

NEW QUESTION # 56

.....

In fact, passing RCA certification exam is just a piece of cake! But in realistic society, some candidates always say that this is difficult to accomplish. Therefore, RCA certification has become a luxury that some candidates aspire to. When the some candidates through how many years attempted to achieve a goal to get RCA Certification, had still not seen success hope, candidate thought always depth is having doubts unavoidably bog: can I get RCA certification? When can I get RCA certification? In this a succession of question behind, is following close on is the suspicion and lax.
