If you are still unsure whether to pursue VCE4Plus EX-Con-101 Exam Questions for Salesforce Certified Experience Cloud Consultant certification exam preparation, you are losing the game at the first stage in a fiercely competitive marketplace. VCE4Plus EX-Con-101 questions are the best option.

Salesforce Certified Experience Cloud Consultant Sample Questions (Q96-Q101):

NEW QUESTION # 96

Universal Containers (UC) maintains multiple customer-facing sites, but only one profile for all customer users. No customer has access to more than one site.

Which step should the UC system administrator take to grant customers access to the appropriate site?

- A. Create and assign a permission set to the users and site.
- **B. Assign the profile to the site membership.**
- C. Add user to the All Customer Portal Users public group.
- D. Enable the Customer Identity profile or permission set.

Answer: B

Explanation:

This option allows UC to grant customers access to the appropriate site. Site membership is a feature that defines which users can access a site and what permissions they have. UC can assign the profile for all customer users to the site membership of each site and specify the default page access and object permissions for that profile. UC can also assign permission sets to the site membership to grant additional permissions to specific users⁴

NEW QUESTION # 97

Universal Containers' (UC) Salesforce org uses SAML 550 with a third-party identity provider for internal user authentication. UC now wants to extend this capability for Experience Cloud site users as well.

What should the UC administrator ensure in order to successfully implement SAML 550 for the Experience Cloud site?

- A. Use the site login URL as an endpoint where SAML assertion is made.
- B. Register the Experience Cloud site as an Identity Provider in SAML settings.
- C. Create a Visualforce page that receives and validates the SAML assertion.
- D. Create a Connected App with custom attributes before configuring SAML settings.

Answer: A

Explanation:

To implement SAML 550 for the Experience Cloud site, the UC administrator should use the site login URL as an endpoint where SAML assertion is made. SAML 550 is a protocol that allows users to authenticate with a third-party identity provider and access Salesforce resources without entering their Salesforce credentials.

The site login URL is the URL that users use to access the Experience Cloud site. By using the site login URL as an endpoint, the UC administrator can configure SAML settings to redirect users to the identity provider for authentication and then back to the Experience Cloud site.

NEW QUESTION # 98

Ursa Major Solar is creating an employee experience portal.

Using audience targeting, how should the Experience designer set it up so that different pages in the portal appear to different departments and roles within those departments?

- A. By using Profile criteria and selecting the Service profile
- B. By using Location criteria and specifying which IP address applies to each department and domain
- C. By using User criteria and selecting appropriate user fields on CRM objects
- D. By using Domain criteria and creating custom domains for each department or role to access the portal

Answer: C

Explanation:

User criteria allow you to target audiences based on user fields on CRM objects, such as department, role, or region. You can use user criteria to set up different pages in the portal for different departments and roles within those departments.

NEW QUESTION # 99

No More Homelessness (NMH) is about to create a public site for volunteers where they will be able to sign up for volunteering opportunities at local events. Each registration will result in a record being created for a custom Event Registration object.

Which three considerations should NMH keep in mind for records created by guest users?

Choose 3 answers

- A. Any active user in an org can be assigned as the default owner of records created by guest users.
- B. Setting the default owner for records created by guests is an option in Experience Cloud sites.
- C. Queues cannot be assigned as owners of records created by guest users.
- D. Default owner does not need Read/Write access to view the records created by guest users.
- E. When possible, one should create and assign queues as owners of records created by guest users.

Answer: A,B,C

Explanation:

For records created by guest users, NMH should keep in mind that queues cannot be assigned as owners, setting the default owner

is an option in Experience Cloud sites, and any active user in an org can be assigned as the default owner. A queue is a location where records can be routed to await processing by a group of users. However, queues cannot be assigned as owners of records created by guest users because guest users do not have access to queues. Setting the default owner for records created by guests is an option in Experience Cloud sites that allows NMH to specify who will own the records created by guest users on their public site. Any active user in an org can be assigned as the default owner of records created by guest users, as long as they have the appropriate permissions and access to the object.

NEW QUESTION # 100

A consultant for Cloud Kicks (CK) is asked to build a site for CK customers. As part of this site, a custom object will be used to manage customer subscriptions. These subscriptions will need to leverage advanced sharing rules to ensure that only appropriate customers can see these subscriptions.

Which two user license types should be granted to customers to support this sharing requirement?

Choose 2 answers

- A. Customer Community Plus Login User
- B. Partner Community User
- C. Customer Community User
- D. Customer Community Login User

Answer: A,B

Explanation:

To support the sharing requirement of using advanced sharing rules for the custom object, CK should grant two user license types to customers: Partner Community User and Customer Community Plus Login User.

These license types allow customers to access custom objects and a subset of standard CRM objects, such as accounts, contacts, cases, and dashboards. These license types also support advanced sharing features, such as role hierarchy, sharing rules, manual sharing, and Apex sharing.

NEW QUESTION # 101

.....
