Quiz 2026 First-grade Microsoft SC-401: Latest Administering Information Security in Microsoft 365 Test Questions

If you want to clear Microsoft real exams but doubt to us, you can download the free demo of SC-401 dumps pdf to check. We will provide the one-year free update once you purchase our SC-401 Practice Questions. I will give you my support if you have any problems and doubts when you learn the Microsoft Certified: Information Security Administrator Associate study materials.

Microsoft Administering Information Security in Microsoft 365 Sample

Questions (Q104-Q109):

NEW QUESTION # 104

You have a Microsoft 365 E5 subscription that has a sensitivity label named Sensitivity1.

You plan to create an auto-labeling policy that will apply Sensitivity1 to Microsoft Exchange Online mailboxes.

On February 1, you create the auto-labeling policy and enable simulation mode by using the default settings.

No modifications are made to the policy in simulation mode.

When will the policy first be turned on?

- A. February 2
- B. never
- C. February 6
- **D. February 15**

Answer: D

NEW QUESTION # 105

Hotspot Question

You have a Microsoft 365 E5 subscription.

In Microsoft Exchange Online, you have the mail flow rule shown in the following exhibit.

□ Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation:

Box 1: subject line

Box 2: restrict recipients from printing the message

Note: IRM is an encryption solution that also applies usage restrictions to email messages. It helps prevent sensitive information from being printed, forwarded, or copied by unauthorized people.

IRM capabilities in Microsoft 365 use Azure Rights Management (Azure RMS).

NEW QUESTION # 106

You have a Microsoft 365 E5 subscription that contains a trainable classifier named Trainable1.

You plan to create the items shown in the following table.

□ Which items can use Trainable 1?

- A. Label2 only
- B. Label1, Label2, Policy1, and DLP1
- C. Label1 and Policy1 only
- **D. Label2, Policy1, and DLP1 only**
- E. Label1 and Label2 only

Answer: D

Explanation:

A trainable classifier in Microsoft Purview is used to automatically identify and classify unstructured data based on content patterns.

The classifier can be used in:

1. Retention Labels (Label2) # Supported

Trainable classifiers can be linked to retention labels to automatically classify and apply retention policies to documents.

2. Retention Label Policies (Policy1) # Supported

Retention label policies define how and where retention labels are applied, including automatically using trainable classifiers.

3. Data Loss Prevention (DLP) Policies (DLP1) # Supported

Trainable classifiers can be used in DLP policies to detect and protect sensitive content automatically.

NEW QUESTION # 107

You have a Microsoft 365 subscription that contains 100 users and a Microsoft 365 group named Group1. All users have Windows 11 devices and use Microsoft SharePoint Online and Exchange Online. A sensitivity label named Label1 is published as the default label for Group1. You add two sublabels named Sublabel1 and Sublabel2 to Label1. You need to ensure that the settings in Sublabel1 are applied by default to Group1. What should you do?

- A. Change the order of Sublabel1
- **B. Modify the policy of Label1.**
- C. Delete the policy of Label1 and publish Sublabel1.
- D. Duplicate all the settings from Sublabel1 to Label1.

Answer: B

Explanation:

Step 1 - Scenario

Microsoft 365 E5 subscription with 100 users and a Microsoft 365 group (Group1).

A sensitivity label (Label1) is published as the default label for Group1.

Label1 contains two sublabels: Sublabel1 and Sublabel2.

Requirement: Ensure Sublabel1 settings are applied by default to Group1.

Step 2 - Understanding label hierarchy

In Microsoft Purview Information Protection, a parent label (Label1) is a container.

Sublabels (Sublabel1, Sublabel2) inherit the parent name but represent distinct configurations (encryption, watermarking, access, etc.).

A parent label itself cannot have a sublabel's settings automatically applied unless policy configuration specifies which sublabel is used as the default publishing option.

Step 3 - Why "Modify the policy of Label1" is correct

To apply Sublabel1 by default, the published policy for Label1 must be modified so that Sublabel1 is the default label within the policy.

Simply reordering sublabels (Option A) does not change the default assignment.

Duplicating Sublabel1's settings into Label1 (Option B) defeats the purpose of having sublabels and adds redundancy.

Deleting the policy of Label1 and publishing Sublabel1 (Option D) would remove flexibility and is unnecessary.

Step 4 - Microsoft Reference

Microsoft Docs: "If you want a sublabel to be applied by default, configure the label policy to select that sublabel as the default label for documents and emails."

NEW QUESTION # 108

Hotspot Question

You have a Microsoft 365 E5 tenant that contains a published sensitivity label named Sensitivity1.

You plan to create a Microsoft Entra group named Group1 and assign Sensitivity1 to Group1.

How should you configure Group1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

Explanation:

Box 1: EnableMIPLabels

Enable sensitivity label support in PowerShell

To apply published labels to groups, you must first enable the feature. These steps enable the feature in Microsoft Entra ID. The Microsoft Graph PowerShell SDK comes in two modules, Microsoft.Graph and Microsoft.Graph.Beta.

Box 2: Microsoft 365

Assign sensitivity labels to Microsoft 365 groups in Microsoft Entra ID Microsoft Entra ID supports applying sensitivity labels to Microsoft 365 groups when those labels are published in the Microsoft Purview portal or the Microsoft Purview compliance portal and the labels are configured for groups and sites.

Sensitivity labels can be applied to groups across apps and services such as Outlook, Microsoft Teams, and SharePoint.
