## RUCKUS Certified Networking Implementer Sample Questions (Q30-Q35):

### NEW QUESTION # 30

Which command enables Open Shortest Path First (OSPF) globally?

- A. area 0
- B. router ospf**
- C. ip ospf area 0
- D. ip ospf cost 100

**Answer: B**

Explanation:

To enable Open Shortest Path First (OSPF) globally on a RUCKUS ICX switch, the router ospf command is used. This command initiates OSPF routing processes, allowing the switch to participate in OSPF-based dynamic routing.

Steps to Enable OSPF Globally:

\* Access Global Configuration Mode:

- \* Enter privileged EXEC mode and then global configuration mode:  
enable
- configure terminal
- \* Enable OSPF Routing:
- \* Activate the OSPF routing process:  
router ospf
- \* Assign OSPF Parameters:
- \* Set the router ID (optional but recommended):  
router-id <A.B.C.D>
- \* Specify OSPF areas and associate interfaces:  
network <network-address> <wildcard-mask> area <area-id>
- \* Configure OSPF on Interfaces:
- \* Enter interface configuration mode for each interface participating in OSPF:  
interface <interface-type> <interface-number>
- ip ospf area <area-id>
- \* Save Configuration:
- \* Ensure the configuration persists after a reboot:  
write memory

#### Example Configuration:

To configure OSPF with a router ID of 1.1.1.1 and include the network 192.168.1.0/24 in area 0:

```
configure terminal
router ospf
router-id 1.1.1.1
network 192.168.1.0 0.0.0.255 area 0
exit
interface ethernet 1/1/1
ip ospf area 0
exit
write memory
```

#### Considerations:

- \* Licensing: Ensure the switch has the appropriate Layer 3 license to support OSPF.
- \* Compatibility: Verify that the FastIron software version supports OSPF.
- \* Network Planning: Properly design OSPF areas and hierarchies to optimize routing efficiency.

### NEW QUESTION # 33

When running FastIron SPS08095e code, which step is required to define static routes?

- A. Run the UFI code image for GZR08095h.
- B. Upgrade to version SPS08095h or later.
- **C. Install the L3-prem license.**
- D. Change the ICX image version to SPR08095e.bin.

**Answer: C**

Explanation:

To define static routes on a device running FastIron SPS08095e code, it's essential to have the appropriate licensing in place.

\* Understanding Licensing Requirements:

\* RUCKUS ICX switches require specific licenses to enable advanced features.

\* The "L3-prem" (Premium Layer 3) license unlocks advanced routing capabilities, including the ability to configure static routes.

\* Verifying Current License Status:

\* Access the switch's command-line interface (CLI).

\* Execute the command `show license` to display the current licensing status.

\* Check for the presence of the "L3-prem" license in the output.

\* Installing the L3-prem License:

\* If the "L3-prem" license is not installed, obtain it from RUCKUS Networks or an authorized distributor.

\* Follow the official RUCKUS licensing guide for detailed installation instructions.

\* Configuring Static Routes:

\* Once the "L3-prem" license is active, enter global configuration mode by typing `configure terminal`.

\* Use the `ip route` command to define static routes. For example: `ip route [destination_network]`

`[subnet_mask] [next_hop_ip]`.

\* After configuring, save the settings with the `write memory` command to ensure persistence across reboots.
