

Dump 312-38 Check, Free 312-38 Test Questions

EC-COUNCIL 312-38

EC-Council Certified Network Defender CND

1

Trustworthy Free 312-38 Exam Questions & Guaranteed EC-COUNCIL 312-38 Exam Success with Accurate Latest 312-38 Exam Materials

Pass4sures provides updated and valid EC-COUNCIL 312-38 Exam Questions because we are aware of the absolute importance of updates, keeping in mind the [EC-COUNCIL 312-38 Exam Syllabus](#). We provide you update checks for 365 days after purchase for absolutely no cost. And the EC-Council Certified Network Defender CND 312-38 price is affordable.

To keep with such an era, when new knowledge is emerging, you need to pursue latest news and grasp the direction of entire development tendency, our 312-38 training questions have been constantly improving our performance and updating the exam bank to meet the conditional changes. Our working staff regards checking update of our [312-38 Preparation](#) exam as a daily routine. So without doubt, our 312-38 exam questions are always the latest and valid.

Latest 312-38 Exam Materials - Certification 312-38 Exam Dumps

EC-COUNCIL 312-38 certification exam is one of the most valuable certification exams. IT industry is under rapid development in the new century, the demands for IT talents are increased year by year. Therefore, a lots of people want to become the darling of the workplace by IT certification. How to get you through the EC-COUNCIL 312-38 certification? The questions and the answers Pass4sures EC-COUNCIL provides are your best choice. It is difficult to pass the test and the proper shortcut is necessary. EC-COUNCIL Business Solutions Pass4sures [312-38 Dumps](#) rewritten by high rated top IT experts to the ultimate level of technical accuracy. The version is the most latest and it has a high quality products.

Trustworthy Free 312-38 Exam Questions & Guaranteed EC-COUNCIL 312-38 Exam Success with Accurate Latest 312-38 Exam Materials

P.S. Free 2025 EC-COUNCIL 312-38 dumps are available on Google Drive shared by TestkingPDF:
https://drive.google.com/open?id=1UZAaT1DO5V0k1NNWfTK-QT_gIJZSXwga

One year free update for 312-38 pdf torrent is available, and you do not worry about missing the updated EC-COUNCIL 312-38 study dumps. In addition, the content of 312-38 pdf download cover almost the key points which will be occurred in the actual test. Besides, you can install your 312-38 Online Test engine on any electronic device, so that you can study at anytime and anywhere. Thus your time is saved and your study efficiency is improved. Our 312-38 312-38 can ensure you 100% pass.

EC-COUNCIL 312-38 exam is a certification exam for the EC-Council Certified Network Defender (CND) designation. The CND certification is designed for professionals who wish to specialize in network defense and security. 312-38 Exam is designed to test the knowledge and skills required for identifying, securing, and defending a network infrastructure against various types of cyber threats.

100% Pass 2026 High Hit-Rate EC-COUNCIL 312-38: Dump EC-Council Certified Network Defender CND Check

Don't let outdated study materials hold you back from passing the EC-Council Certified Network Defender CND (312-38) certification exam. Our platform offers updated 312-38 exam dumps in three formats - PDF, web-based practice exams, and

desktop practice test software - so you can study and prepare anytime, anywhere. With our reliable study materials, you can achieve your career goals and land a high-paying job in the technology industry. Don't waste your resources on outdated material - trust our platform to provide you with the actual and updated EC-COUNCIL 312-38 Practice Questions you need to succeed.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q52-Q57):

NEW QUESTION # 52

Blake is working on the company's updated disaster and business continuity plan. The last section of the plan covers computer and data incidence response. Blake is outlining the level of severity for each type of incident in the plan. Unsuccessful scans and probes are at what severity level?

- A. Low severity level
- B. Extreme severity level
- C. High severity level
- D. Mid severity level

Answer: A

Explanation:

In the context of incident response, unsuccessful scans and probes are typically considered a low severity level. This is because they often indicate an attempted reconnaissance or mapping of systems rather than a successful compromise or disruption of services. While they should be monitored and analyzed to improve defenses and detect patterns of malicious activity, they do not usually signify an immediate threat to the integrity, availability, or confidentiality of systems.

NEW QUESTION # 53

To secure his company's network, Tim the network admin, installed a security device that inspected all inbound and outbound network traffic for suspicious patterns. The device was configured to alert him if it found any such suspicious activity. Identify the type of network security device installed by Tim?

- A. Firewall
- B. Honeypot
- C. Intrusion Detection System (IDS)
- D. Proxy server

Answer: C

Explanation:

The network security device described is an Intrusion Detection System (IDS). An IDS monitors all inbound and outbound network traffic for suspicious patterns and is configured to alert the network administrator if it detects any such activity. This aligns with the primary function of an IDS, which is to serve as a monitoring system, not necessarily to block traffic like a firewall or act as a decoy like a honeypot. It differs from a proxy server, which would primarily manage and forward web requests on behalf of clients. The IDS operates by analyzing traffic and identifying potential threats based on known signatures or anomalies in network behavior, thereby enabling the network admin to take appropriate action to secure the network.

References: The explanation provided is based on standard network security practices and the functionalities of an Intrusion Detection System (IDS) as outlined in network security resources. For detailed and specific references, please consult the latest Certified Network Defender (CND) study materials and documents provided by the EC-Council.

NEW QUESTION # 54

Which of the following is a network layer protocol used to obtain an IP address for a given hardware (MAC) address?

- A. PIM
- B. IP
- C. ARP
- D. RARP

Answer: D

Explanation:

Reverse Address Resolution Protocol (RARP) is a Network layer protocol used to obtain an IP address for a given hardware (MAC) address. RARP is sort of the reverse of an ARP. Common protocols that use RARP are BOOTP and DHCP. Answer option D is incorrect. Address Resolution Protocol (ARP) is a network maintenance protocol of the TCP/IP protocol suite. It is responsible for the resolution of IP addresses to media access control (MAC) addresses of a network interface card (NIC). The ARP cache is used to maintain a correlation between a MAC address and its corresponding IP address. ARP provides the protocol rules for making this correlation and providing address conversion in both directions. ARP is limited to physical network systems that support broadcast packets. Answer option B is incorrect. Protocol-Independent Multicast (PIM) is a family of multicast routing protocols for Internet Protocol (IP) networks that provide one-to-many and many-to-many distribution of data over a LAN, WAN, or the Internet. It is termed protocol-independent because PIM does not include its own topology discovery mechanism, but instead uses routing information supplied by other traditional routing protocols, such as Border Gateway Protocol (BGP). Answer option A is incorrect. The Internet Protocol (IP) is a protocol used for communicating data across a packet-switched inter-network using the Internet Protocol Suite, also referred to as TCP/IP. IP is the primary protocol in the Internet Layer of the Internet Protocol Suite and has the task of delivering distinguished protocol datagrams (packets) from the source host to the destination host solely based on their addresses. For this purpose, the Internet Protocol defines addressing methods and structures for datagram encapsulation. The first major version of addressing structure, now referred to as Internet Protocol Version 4 (IPv4), is still the dominant protocol of the Internet, although the successor, Internet Protocol Version 6 (IPv6), is being deployed actively worldwide.

NEW QUESTION # 55

Assume that you are working as a network administrator in the head office of a bank. One day a bank employee informed you that she is unable to log in to her system. At the same time, you get a call from another network administrator informing you that there is a problem connecting to the main server. How will you prioritize these two incidents?

- A. Based on approval from management
- B. Based on a first come first served basis
- C. Based on a potential technical effect of the incident
- D. Based on the type of response needed for the incident

Answer: C

Explanation:

Prioritizing incidents in a network environment, especially within a critical infrastructure like a bank, should be based on the potential technical effect of the incident. This approach ensures that the most severe and impactful issues are addressed first to maintain business continuity and minimize potential damage. The incident involving the main server would likely take precedence because it could affect a larger number of systems and operations within the bank, compared to an individual's login issue. The ITIL framework supports this prioritization method by emphasizing the importance of impact and urgency when managing network incidents.

NEW QUESTION # 56

How many layers are present in the OSI layer model?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

NEW QUESTION # 57
