NEW QUESTION # 24

Which of the following descriptions of the bimodal adaptive threshold segmentation method are correct? (Multiple choice)

- A. If the grayscale histogram of the image is very flat or has multiple peaks, the bimodal method cannot be used to obtain a suitable threshold.
- B. Histogram bimodal method is an easy-to-understand adaptive threshold algorithm
- C. The bimodal method divides the image into foreground and background according to the grayscale characteristics of the image. The larger the inter-class variance between the foreground and the background, the greater the difference between the two parts that make up the image.
- D. If the image grayscale histogram is obviously bimodal, the grayscale value corresponding to the valley between the two peaks is selected as the threshold for image segmentation.

Answer: A,B,C,D
