AP-219 Exam Sample - AP-219 Frenquent Update

Being a social elite and making achievements in your own field may be the dream of all people. However, only a very few people seize the initiative in their life. Perhaps our research data will give you some help. As long as you spend less time on the game and spend more time on learning, the AP-219 study materials can reduce your pressure so that users can feel relaxed and confident during the preparation and certification process. It is believed that many users have heard of the AP-219 Study Materials from their respective friends or news stories. So why don't you take this step and try? You will not regret your wise choice.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q90-Q95):

NEW QUESTION # 90

What type of relationship exists between FulfillmentOrder and Location?

- A. Junction (Many to Many)
- B. One-to-Many Lookup (Location) FulfilledFrom Location Id
- C. Many-to-One Lookup(Location) Fulfil led from Location Id

- D. One-to-One Lookup (Location) FulfilledFrom Location

Answer: C

Explanation:

The type of relationship that exists between FulfillmentOrder and Location is Many-to-One Lookup (Location) FulfilledFrom Location Id. A Lookupfield is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. A Many-to-One relationship means that many child records can be related to one parent record, but not vice versa. In this case, a FulfillmentOrder has a Lookup field named FulfilledFrom Location Id that references a Location record. A Location is a record that represents a physical location from which order product items are fulfilled, such as warehouses and retail stores. A Location can have many FulfillmentOrders associated with it, but a FulfillmentOrder can only have one Location. NEW QUESTION # 91

Based on some changes in Universal Containers' Commerce engine, new Orders are expected to have two additional attributes at the header level. In Order Management, which other Object besides Order also needs to be extended?

- A. Change Order
- **B. Order Summary**
- C. Payment Summary
- D. Delivery Groups

Answer: B

Explanation:

Based on some changes in Universal Containers' Commerce engine, new Orders are expected to have two additional attributes at the header level. In Order Management, besides Order, the other object that also needs to be extended is Order Summary. An Order Summary is a record that stores information about an order, such as the total amount, the number of items, and the fulfillment status. An Order Summary is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. To extend an object in Order Management, an administrator can create custom attributes on that object that match the API name and data type of the corresponding attributes in B2C Commerce. Reference: Order Management Objects

NEW QUESTION # 92

An admin is observing a flow and needs to watch all of the variables changing as the process executes, but nothing like this is being displayed. What did the developer forget to enable?

- **A. Show the details of what's executed and render flow in Lightning Runtime**
- B. Show execution details
- C. Show the details of what's executed and render flow in Lightning Experience
- D. Show execution details inline

Answer: A

NEW QUESTION # 93

A company's service team should not see Process Exceptions on any Order Summaries. How can an administrator meet these requirements?

- A. Add a filter to the Process Exception component on the Order Summary lightning record page to hide the component for the service team's Profile
- B. Modify the service team profiles to remove access to the lightning component and all associated Apex classes
- C. Modify the Order Summary page layout to remove visibility to the Process Exception component for Service team profiles
- **D. Create a copy of the Order Summary lightning record page for the service team and remove the Process Exceptions component. Activate the lightning record page by profile for all Service team profiles.**

Answer: D

NEW QUESTION # 94

A company has an external system that stores client accounting data but they want to be able to search for this data within Salesforce. What three steps should the administrator take to implement this functionality?

- A. Create an automated import of the external data using the Job Scheduler
- B. Create an External Data Source pointing to the external system's database
- C. Create an External Object for each table of accounting data in the external system
- D. Create an automated data capture (or the external system)
- E. Create an Indirect Lookup field to connect to the Account

Answer: B,C,E

Explanation:

Three steps that the administrator should take to implement this functionality are:

Create an External Data Source pointing to the external system's database. An External Data Source is a type of metadata that defines the connection and authentication information for an external system that stores data outside of Salesforce. The administrator can create an External Data Source using the Lightning Connect OData 2.0 or 4.0 adapters, which support read-only access to data in relational databases.

Create an External Object for each table of accounting data in the external system. An External Object is a type of custom object that maps to a table in an external system. The administrator can create an External Object for each table of accounting data that they want to access from Salesforce, and define its fields and relationships accordingly.

Create an Indirect Lookup field to connect to the Account. An Indirect Lookup field is a type of custom field that links a child External Object record to a parent standard or custom object record. The administrator can create an Indirect Lookup field on the External Object that references the Account object, and specify the external column name and value that match the Account ID.
