NEW QUESTION # 211

HOTSPOT

Your network contains an Active Directory domain named fabrikam.com. The domain contains the objects shown in the following table.

The groups have the members shown in the following table.

You are configuring synchronization between fabrikam.com and an Azure AD tenant.

You configure the Domain/OU Filtering settings in Azure AD Connect as shown in the Domain/OU Filtering exhibit (Click the Domain/OU Filtering tab.)

You configure the Filtering settings in Azure AD Connect as shown in the Filtering exhibit. (Click the Filtering tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: No

The filtering is configured to synchronize Group2 and OU2 only. The effect of this is that only members of Group2 who are in OU2 will be synchronized.

User2 is in Group2. However, the User2 account object is in OU1 so User2 will not synchronize to Azure AD.

Box 2: Yes

Group2 is in OU2 so Group2 will synchronize to Azure AD. However, only members of the group who are in OU2 will synchronize. Members of Group2 who are in OU1 will not synchronize.

Box 3: Yes

User3 is in Group2 and in OU2. Therefore, User3 will synchronize to Azure AD.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering#group-b>

NEW QUESTION # 212

HOTSPOT

Your network contains an on-premises Active Directory domain.

You have a Microsoft 365 E5 subscription.

You plan to implement directory synchronization.

You need to identify potential synchronization issues for the domain. The solution must use the principle of least privilege.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

Explanation

Box 1: IdFix

Query and fix invalid object attributes with the IdFix tool

Microsoft is working to reduce the time required to remediate identity issues when onboarding to Microsoft

365. A portion of this effort is intended to address the time involved in remediating the Windows Server Active Directory (Windows Server AD) errors reported by the directory synchronization tools such as Azure AD Connect and Azure AD Connect cloud sync.

The focus of IdFix is to enable you to accomplish this task in a simple, expedient fashion.

The IdFix tool provides you the ability to query, identify, and remediate the majority of object synchronization errors in your Windows Server AD forests in preparation for deployment to Microsoft 365. The utility does not fix all errors, but it does find and fix the majority. This remediation will then allow you to successfully synchronize users, contacts, and groups from on-premises Active Directory into Microsoft 365. Note: IdFix might identify errors beyond those that emerge during synchronization. The most common example is compliance with rfc 2822 for smtp addresses. Although invalid attribute values can be synchronized to the cloud, the product group recommends that these errors be corrected.

Incorrect:

* AccessChk

Box 2: Enterprise Admins

IdFix permissions requirements

The user account that you use to run IdFix must have read and write access to the AD DS domain.

If you aren't sure if your user account meets these requirements, and you're not sure how to check, you can still download and run IdFix. If your user account doesn't have the right permissions, IdFix will simply display an error when you try to run it.

* Enterprise Admins

The Enterprise Admins group exists only in the root domain of an Active Directory forest of domains. The group is a Universal group if the domain is in native mode. The group is a Global group if the domain is in mixed mode. Members of this group are authorized to make forest-wide changes in Active Directory, like adding child domains.

Incorrect:

* Domain Admins

Members of the Domain Admins security group are authorized to administer the domain. By default, the Domain Admins group is a member of the Administrators group on all computers that have joined a domain, including the domain controllers. The Domain Admins group is the default owner of any object that's created in Active Directory for the domain by any member of the group. If members of the group create other objects, such as files, the default owner is the Administrators group.

* Server Operator

Server Operators can log on to a server interactively; create and delete network shares; start and stop services; back up and restore files; format the hard disk of the computer; and shut down the computer. Any service that accesses the system has the Service identity.

* Domain Users - too few permissions

The Domain Users group includes all user accounts in a domain. When you create a user account in a domain, it's automatically added to this group.
