

# New Google Professional-Cloud-Architect Exam Discount, Professional-Cloud-Architect Latest Test Answers

BONUS!!! Download part of Actualtests4sure Professional-Cloud-Architect dumps for free: <https://drive.google.com/open?id=1dNmJtucknYu3KIG2BAtx2egkxasbNwg>

Unlike many other learning materials, our Professional-Cloud-Architect study materials are specially designed to help people pass the exam in a more productive and time-saving way, and such an efficient feature makes it a wonderful assistant in personal achievement as people have less spare time nowadays. On the other hand, Professional-Cloud-Architect Study Materials are aimed to help users make best use of their sporadic time by adopting flexible and safe study access.

## Analyzing & Optimizing Business and Technical Processes

- Analyze and define business processes: this entails stakeholder management (facilitation and influencing); decision-making process; change management; skill readiness and team assessment; cost optimization and resource optimization; customer success management; procedure development to ensure the resilience of solutions with production.
- Analyze and define technical processes: this area will require skills in testing and validation; software development lifecycle plan; troubleshooting and post mortem analysis culture; continuous deployment and continuous integration; service catalog and provisioning; disaster recovery and business continuity;

Google Professional-Cloud-Architect (Google Certified Professional - Cloud Architect (GCP)) certification exam is designed for individuals who are skilled in developing and designing solutions on Google Cloud Platform. Professional-Cloud-Architect Exam measures an individual's ability to design, plan, and manage solutions on Google Cloud Platform. It is an advanced-level exam that tests the candidate's knowledge of cloud architecture, infrastructure, security, and compliance.

Google Certified Professional – Cloud Architect (GCP) is a certification offered by Google Cloud Platform that validates the skills of an individual in designing, developing, and managing solutions using Google Cloud technologies. Google Certified Professional - Cloud Architect (GCP) certification is aimed at cloud architects, solution architects, and DevOps engineers who are responsible for designing, implementing, and managing solutions on the Google Cloud Platform.

## Google Professional-Cloud-Architect Latest Test Answers & Professional-Cloud-Architect Download Fee

If you are still struggling to get the Google Professional-Cloud-Architect exam certification, Actualtests4sure will help you achieve your dream. Actualtests4sure's Google Professional-Cloud-Architect exam training materials is the best training materials. We can provide you with a good learning platform. How do you prepare for this exam to ensure you pass the exam successfully? The answer is very simple. If you have the appropriate time to learn, then select Actualtests4sure's Google Professional-Cloud-Architect

Exam Training materials. With it, you will be happy and relaxed to prepare for the exam.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q25-Q30):

### NEW QUESTION # 25

Your company is developing a web-based application. You need to make sure that production deployments are linked to source code commits and are fully auditable. What should you do?

- A. Make sure the developer is tagging the commits with latest.
- B. Make sure a developer is tagging the code commit with the date and time of commit.
- **C. Make the container tag match the source code commit hash.**
- D. Make sure a developer is adding a comment to the commit that links to the deployment.

**Answer: C**

Explanation:

[https://cloud.google.com/architecture/best-practices-for-building-containers#tagging\\_using\\_the\\_git\\_commit\\_hash](https://cloud.google.com/architecture/best-practices-for-building-containers#tagging_using_the_git_commit_hash)

You can use this commit hash as a version number for your software, but also as a tag for the Docker image built from this specific version of your software. Doing so makes Docker images traceable: because in this case the image tag is immutable, you instantly know which specific version of your software is running inside a given container.

### NEW QUESTION # 26

For this question, refer to the Mountkirk Games case study.

Mountkirk Games wants to set up a real-time analytics platform for their new game. The new platform must meet their technical requirements. Which combination of Google technologies will meet all of their requirements?

- A. Cloud Pub/Sub, Compute Engine, Cloud Storage, and Cloud Dataproc
- B. Cloud SQL, Cloud Storage, Cloud Pub/Sub, and Cloud Dataflow
- C. Container Engine, Cloud Pub/Sub, and Cloud SQL
- D. Cloud Dataproc, Cloud Pub/Sub, Cloud SQL, and Cloud Dataflow
- **E. Cloud Dataflow, Cloud Storage, Cloud Pub/Sub, and BigQuery**

**Answer: E**

Explanation:

A real time requires Stream/ Messaging so Pub/Sub, Analytics by Big Query.

### NEW QUESTION # 27

You are designing a Data Warehouse on Google Cloud and want to store sensitive data in BigQuery. Your company requires you to generate encryption keys outside of Google Cloud. You need to implement a solution. What should you do?

- A. Generate a new key in Cloud Key Management Service (Cloud KMS). Create a dataset in BigQuery using the customer-managed key option and select the created key
- B. Import a key in Cloud KMS. Store all data in Cloud Storage using the customer-managed key option and select the created key. Set up a Dataflow pipeline to decrypt the data and to store it in a new BigQuery dataset.
- **C. Import a key in Cloud KMS. Create a dataset in BigQuery using the customer-supplied key option and select the created key.**
- D. Generate a new key in Cloud Key Management Service (Cloud KMS). Store all data in Cloud Storage using the customer-managed key option and select the created key. Set up a Dataflow pipeline to decrypt the data and to store it in a BigQuery dataset.

**Answer: C**

Explanation:

Explanation

<https://cloud.google.com/bigquery/docs/customer-managed-encryption>

### NEW QUESTION # 28

You set up an autoscaling instance group to serve web traffic for an upcoming launch. After configuring the instance group as a backend service to an HTTP(S) load balancer, you notice that virtual machine (VM) instances are being terminated and re-launched every minute. The instances do not have a public IP address. You have verified the appropriate web response is coming from each instance using the curl command. You want to ensure the backend is configured correctly. What should you do?

- A. Ensure that a firewall rule exists to allow source traffic on HTTP/HTTPS to reach the load balancer.
- **B. Ensure that a firewall rule exists to allow load balancer health checks to reach the instances in the instance group.**
- C. Assign a public IP to each instance and configure a firewall rule to allow the load balancer to reach the instance public IP.
- D. Create a tag on each instance with the name of the load balancer. Configure a firewall rule with the name of the load balancer as the source and the instance tag as the destination.

**Answer: B**

Explanation:

<https://cloud.google.com/vpc/docs/using-firewalls>

The best practice when configuration a health check is to check health and serve traffic on the same port. However, it is possible to perform health checks on one port, but serve traffic on another. If you do use two different ports, ensure that firewall rules and services running on instances are configured appropriately. If you run health checks and serve traffic on the same port, but decide to switch ports at some point, be sure to update both the backend service and the health check.

Backend services that do not have a valid global forwarding rule referencing it will not be health checked and will have no health status.

### NEW QUESTION # 29

You need to upload files from your on-premises environment to Cloud Storage. You want the files to be encrypted on Cloud Storage using customer-supplied encryption keys. What should you do?

- **A. Supply the encryption key in a .boto configuration file. Use gsutil to upload the files.**
- B. Use gsutil to upload the files, and use the flag --encryption-key to supply the encryption key.
- C. Supply the encryption key using gcloud config. Use gsutil to upload the files to that bucket.
- D. Use gsutil to create a bucket, and use the flag --encryption-key to supply the encryption key. Use gsutil to upload the files to that bucket.

**Answer: A**

Explanation:

Explanation

<https://cloud.google.com/storage/docs/encryption/customer-supplied-keys#gsutil>

### NEW QUESTION # 30

.....

Are you still satisfied with your present job? Do you still have the ability to deal with your job well? Do you think whether you have the competitive advantage when you are compared with people working in the same field? If your answer is no, you are a right place now. Because our Professional-Cloud-Architect exam torrent will be your good partner and you will have the chance to change your work which you are not satisfied with, and can enhance your ability by our Professional-Cloud-Architect Guide questions, you will pass the Professional-Cloud-Architect exam and achieve your target. Just free download the demo of our Professional-Cloud-Architect exam questions!
