As is known to all, SC-401 practice guide simulation plays an important part in the success of exams. By simulation, you can get the hang of the situation of the real exam with the help of our free demo. Simulation of our SC-401 training materials make it possible to have a clear understanding of what your strong points and weak points are and at the same time, you can learn comprehensively about the SC-401 Exam. By combining the two aspects, you are more likely to achieve high grades.

Microsoft SC-401 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365. |
| Topic 2 | <ul style="list-style-type: none"> Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview. |

| | |
|---------|--|
| Topic 3 | <ul style="list-style-type: none"> • Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection. |
| Topic 4 | <ul style="list-style-type: none"> • Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows. |

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q163-Q168):

NEW QUESTION # 163

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You have a user named User1. Several users have full access to the mailbox of User1.

Some email messages sent to User1 appear to have been read and deleted before the user viewed them.

When you search the audit log in the Microsoft Purview portal to identify who signed in to the mailbox of User1, the results are blank.

You need to ensure that you can view future sign-ins to the mailbox of User1.

Solution: You run the `Set-AdminAuditLogConfig -AdminAuditLogEnabled $true -AdminAuditLogCmdlets`

`*Mailbox*` command.

Does that meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The `Set-AdminAuditLogConfig -AdminAuditLogEnabled $true -AdminAuditLogCmdlets *Mailbox*` command is incorrect. This enables admin audit logging, which tracks changes to mailbox configurations (e. g., mailbox settings updates), not user activity inside the mailbox.

NEW QUESTION # 164

You are creating a DLP policy named Policy1 that will be applied to the locations as shown in the following exhibit.

Policy1 contains an advanced data loss prevention (DLP) rule named Rule1.

Which two conditions can you use in Rule1? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Document property is
- B. Content contains
- C. Content is shared from Microsoft 365
- D. Attachment's file extension is
- E. Document size equals or is greater than

Answer: B,C

NEW QUESTION # 165

You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Cloud Apps.

You need to ensure that you receive an alert when a user uploads a document to a third-party cloud storage service.

What should you use?

- A. a sensitivity label
- B. a file policy
- C. an activity policy
- D. an insider risk policy

Answer: C

Explanation:

Activity Policy (MCAS): Monitors and alerts on specific user actions such as uploading files, downloads, or logins to cloud apps. Perfect for detecting "upload to third-party storage".

Sensitivity label: Used for classifying and protecting content, not generating alerts.

File policy (MCAS): Inspects and governs files already stored in sanctioned apps, not upload activity.

Insider risk policy: Focuses on risky behavior like data exfiltration or security violations, not direct activity alerts in cloud apps.

answer: A. an activity policy

Reference: Defender for Cloud Apps activity policies

NEW QUESTION # 166

You have a Microsoft 365 E5 subscription that contains the devices shown in the following table.

You plan to implement 'inside' risk management and capture forensic evidence. Which devices support the collection of forensic evidence, and what should you do to prepare each supported device? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

The question is about Insider Risk Management forensic evidence collection in Microsoft 365 E5 (Microsoft Purview).

Step 1 - Which devices are supported?

According to Microsoft documentation, forensic evidence collection for insider risk investigations is supported only on:

Windows 10

Windows 11

It is not supported on:

macOS

Android

iOS

Reference: Forensic evidence collection in Microsoft Purview Insider Risk Management

So, only Device1 (Windows 11) and Device2 (Windows 10) qualify.

Step 2 - What preparation is needed?

For forensic evidence to be collected, supported devices must:

Be onboarded to Microsoft Purview (via Microsoft Defender for Endpoint integration).

Have the Microsoft Purview client installed.

This enables capture of user actions such as file copies, USB transfers, printing, etc., to provide forensic evidence for insider risk alerts.

Correct option: Onboard the devices to Microsoft Purview and install the Microsoft Purview client

NEW QUESTION # 167

You have a Microsoft 365 subscription that contains 100 users and a Microsoft 365 group named Group1. All users have Windows 11 devices and use Microsoft SharePoint Online and Exchange Online. A sensitivity label named Label1 is published as the default label for Group1. You add two sublabels named Sublabel1 and Sublabel2 to Label1. You need to ensure that the settings in Sublabel1 are applied by default to Group1.

What should you do?

- A. Duplicate all the settings from Sublabel1 to Label1.
- B. Change the order of Sublabel1.
- C. Delete the policy of Label1 and publish Sublabel1.
- D. Modify the policy of Label1.

Answer: D

NEW QUESTION # 168

.....

What is VerifiedDumps Microsoft SC-401 exam training materials? There are many online sites provide Microsoft SC-401 exam training resources. But VerifiedDumps provide you the most actual information. VerifiedDumps have professional personnel of certification experts, technical staff, and comprehensive language masters. They are always studying the latest Microsoft SC-401 Exam. Therefore, if you want to pass the Microsoft SC-401 examination, please Login VerifiedDumps website. It will let you close to your success, and into your dream paradise step by step.
